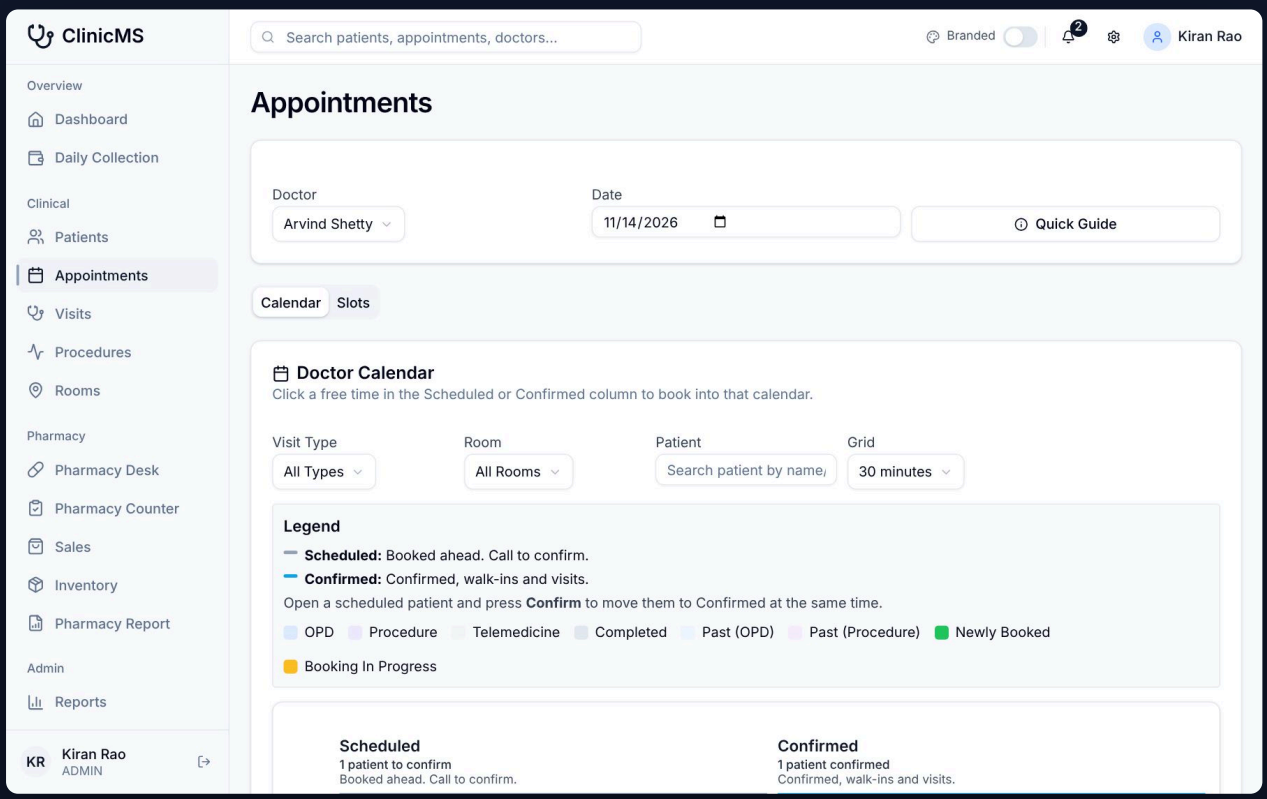
Clinic Management System User Guide

How to do every task in the app, screen by screen: front desk, consultation, pharmacy, stock, reports and administration.



For doctors, reception, pharmacy and admin staff

14 November 2026

Contents

1. Getting started 6
- 1.1 Sign in 6
- 1.2 Reset a forgotten password 7
- 1.3 The parts of the screen 7
- 1.4 Search from anywhere 8
- 1.5 Notifications 9
- 1.6 My Settings 10
- 1.7 Branded mode 12
- 1.8 Quick Guides and tours 13
- 1.9 What each role sees 13
- 1.10 Sign out 15

2. Dashboard 16
- 2.1 Read the Dashboard 16
- 2.2 The counters 17
- 2.3 Back up the database 17
- 2.4 Act on System Alerts 18
- 2.5 See today's appointments 20
- 2.6 Your patients and recent visits (doctors) 21
- 2.7 What reception and pharmacy staff see 22
- 2.8 Take the reception tour 22
- 2.9 Take the doctor's visit tour 23

3. Patients 25
- 3.1 Find your way around the Patients list 25
- 3.2 Read a patient row 26
- 3.3 Search for a patient 26
- 3.4 Filter, sort and page through the list 27
- 3.5 Export the patient list 29
- 3.6 Register a new patient 29
- 3.7 Register a walk-in and book the next free slot 32
- 3.8 Change a patient's details 34
- 3.9 Archive a patient 35
- 3.10 Link a patient to the patient portal 36
- 3.11 Send a WhatsApp reminder 37
- 3.12 Open a patient's page 37
- 3.13 Follow a patient's progress 38
- 3.14 Check a patient's details 39
- 3.15 Read a patient's history 39
- 3.16 Add before and after photos 40
- 3.17 Quick Guide 42

4. Appointments 44
- 4.1 Open a doctor's day 44
- 4.2 Understand the Scheduled and Confirmed columns 45
- 4.3 Read an appointment block 46
- 4.4 Know the statuses and colours 48
- 4.5 Filter the day 49
- 4.6 Book an appointment for a registered patient 50
- 4.7 Book a patient who is not registered yet 53
- 4.8 Book a procedure 54
- 4.9 See an appointment's details 56
- 4.10 Confirm an appointment after the call 57
- 4.11 Reschedule an appointment 58
- 4.12 Cancel an appointment 59
- 4.13 Start a visit from an appointment 59
- 4.14 Bill a consultation from the calendar 60
- 4.15 Take the rest of a payment 62
- 4.16 Overbook a full time 63
- 4.17 Use the Slots tab 66
- 4.18 The doctor's view 66
- 4.19 Sync with Google Calendar 67
- 4.20 Quick Guide 67

5. Rooms 69
- 5.1 See which rooms are in use today 69
- 5.2 Read the counters 70
- 5.3 Check the details of a booked room 70
- 5.4 Understand the colours 71
- 5.5 Look at another day or one type of room 72
- 5.6 See the list of rooms 73
- 5.7 Add a room 74
- 5.8 Change a room's name, type or capacity 76
- 5.9 Switch a room off or on 77
- 5.10 Delete a room 78
- 5.11 Quick Guide 78

6. Visits 80
- 6.1 Open the Visits page 80
- 6.2 Start a new visit 81
- 6.3 Check the patient's history before you start 82
- 6.4 Open a visit from an appointment 83
- 6.5 The parts of the visit form 84
- 6.6 Tele-video consultations 86
- 6.7 Record vitals 86
- 6.8 Add photos 87
- 6.9 Compare before and after 89
- 6.10 Enter lab results 89
- 6.11 Write the prescription and clinical notes 91
- 6.12 See the visit history 91
- 6.13 Save your work 93
- 6.14 Complete the visit 93
- 6.15 Resume a visit later 94
- 6.16 What a nurse sees 95
- 6.17 Quick Guide and shortcuts 95

7. Prescriptions 97
- 7.1 Open the Prescription tab 97
- 7.2 Record the chief complaints 98
- 7.3 Enter the diagnosis 99
- 7.4 Record the patient's history 99
- 7.5 Record the examination (On Examination) 100

7.6 Add medicines 102
7.7 Frequency, timing, duration and custom options 103
7.8 Change the order, add and remove rows 104
7.9 Treatment suggestions 106
7.10 Procedures and investigations 107
7.11 Add a custom section 108
7.12 Language, follow-up and review date 109
7.13 Save the prescription 110
7.14 Use templates 111
7.15 Dictate with the microphone 113
7.16 Preview and print the prescription 113
7.17 Fit a long prescription on one page 115
7.18 Print, download and share 116
7.19 Tele-video consultations on the print 117
7.20 Print layout settings (Customization tab) 118

8. Procedures 120
8.1 The Procedures page 120
8.2 Record a procedure session 121
8.3 Choose the machine and enter its settings 123
8.4 Look at earlier sessions 124
8.5 Analytics 125
8.6 The Quick Guide 126

9. Pharmacy Desk 128
9.1 Read the Pharmacy Desk 128
9.2 Quick Guide 129
9.3 Look up and follow up pharmacy invoices 130
9.4 Manage the drug list 131
9.5 Add a new drug 132
9.6 Ask the Pharmacy AI assistant 133
9.7 Enter a partner pharmacy's daily sales 134
9.8 Browse treatment packages 136
9.9 Create a treatment package 138
9.10 Sell a package on a bill 141

10. Pharmacy Counter 142
10.1 The parts of the counter 142
10.2 Read the queue 143
10.3 Review every medicine 145
10.4 Pause a prescription 146
10.5 Take a prescription from queue to paid and dispensed 147
10.6 Daily close and shelf locations 151
10.7 The Prescription Queue table 151

11. Sales 152
11.1 Find your way around the Sales list 152
11.2 Read the badges on a bill row 153
11.3 Search for a bill 154
11.4 Choose the period 155
11.5 Filter by payment and by state 156
11.6 Row actions: discount, print and WhatsApp 157
11.7 Bill medicines to a patient (New sale) 159
11.8 Set quantity, discount and GST on each medicine 160
11.9 Give a discount on the whole bill 162
11.10 Take payment and finish the sale 163
11.11 Open a finished bill 166
11.12 Change the discount on a finished bill 166
11.13 A bill with money still due 169
11.14 Save a bill as a draft and finish it later 171
11.15 Discard a draft 173
11.16 Bill a prescription from the queue 174
11.17 Take back medicines (New return) 177
11.18 See returns 179

12. Inventory: today and stock 181
12.1 Find your way around Inventory 181
12.2 Check data quality 183
12.3 Work through What needs attention 184
12.4 Find a medicine in the stock list 186
12.5 What the colours mean 188
12.6 Use more filters, cost columns and bulk actions 189
12.7 Open a medicine's page 191
12.8 Check the batches of a medicine 192
12.9 Correct the details of a batch 194
12.10 Set minimum, maximum and reorder levels 195
12.11 Change a price or a stock quantity 196
12.12 Approve or reject price and stock changes 196
12.13 Approve new medicines added by staff 197
12.14 Read a medicine's history 198
12.15 Find slow-moving stock to return or use up 200
12.16 Set up the stock count cycle 201
12.17 Count the shelves and sign off 202
12.18 Approve or reject a stock count 203
12.19 Count an item or a shelf on demand 204
12.20 Look up past counts 204
12.21 Record loss or breakage 205
12.22 Block stock from sale 207
12.23 Corrections 208
12.24 Enter opening stock 209
12.25 See every stock movement in the stock ledger 210

13. Inventory: purchases 211
13.1 Find your way around Purchases 211
13.2 Look up a supplier bill in the register 213
13.3 Enter a bill by scanning or uploading it 215
13.4 Enter a bill by hand: the supplier and the bill details 217
13.5 Enter the lines and match each to a product 219
13.6 Review the bill and add the stock 224
13.7 Understand bill and payment statuses 227
13.8 Drafts and recovery 229
13.9 Import a bill from a CSV file or Gmail 231
13.10 Keep the distributor list 231
13.11 Pay a distributor and watch overdue bills 233

13.16 Compare purchase costs and find the day-wise reports 244

14. Inventory: reorder and sales 246

14.1 How reordering works: minimum, maximum and reorder level 246
14.2 Find what is running short with the shortbook 247
14.3 Create and submit a purchase order 250
14.4 Approve, send and receive a purchase order 253
14.5 Review target proposals 257
14.6 Set minimum, maximum and reorder level by hand 259
14.7 Automation settings and the monitor 262
14.8 Record a counter sale 265
14.9 Take a customer return 268
14.10 Quotations and patient invoice history 270
14.11 Inventory Sales and the Sales item in the menu 272

15. Pharmacy Report 274

15.1 Find a report 274
15.2 Use the report toolbar 276
15.3 Purchase Register 277
15.4 Purchase Bills and Sales Bills 278
15.5 Sales Register 279
15.6 Day wise Summary 280
15.7 GSTR-1 281
15.8 GSTR-3B 283
15.9 GSTR-2A and GSTR-2B 284
15.10 HSN wise GST 285
15.11 Composition GST Report 286
15.12 Item Wise Margin Report 286
15.13 Expiring Stock 288
15.14 Count the day's takings: Daily Collection 289
15.15 GST Summary & Monthly P&L 292
15.16 Daily Sales Summary – Doctorwise 293

16. Reports & Analytics 295

16.1 Open Reports & Analytics 295
16.2 Read the System Alerts strip 296
16.3 Generate a report 296
16.4 Revenue Report 297
16.5 Patient Analytics 298
16.6 Doctor Performance 300
16.7 Appointment Analytics 301
16.8 Inventory Report 302
16.9 Payment Analytics 304
16.10 Export a report 304

17. Users 306

17.1 Find your way around the Users page 306
17.2 Add a new member of staff 307
17.3 Change someone's details or status 309
17.4 Give someone a password reset code 310
17.5 Change a role or permissions 312
17.6 What each role can do 312
17.7 Set a doctor's working hours, leave and overbooking 313
17.8 Set up WhatsApp messages for a doctor 315
17.9 Write WhatsApp message templates 316
17.10 Add a clinic holiday 318
17.11 Remove a staff account 319

18. Fee list 321

18.1 See the clinic's fees 321
18.2 Set or change a fee 322
18.3 Clear a fee 323
18.4 How the appointment calendar uses the fees 324
18.5 Who can change the fees 324

19. Voice transcription test 325

19.1 When to use the test page 325
19.2 Record and transcribe a test clip 326
19.3 Read the transcription result 326
19.4 The Diagnostics box 327

How to read this guide

Each chapter follows one item in the menu on the left of the app. Within a chapter, each section is one task. A section tells you who normally does the task, gives the steps in order, and shows the screen.

Bold text	The exact words on a button, tab or field in the app.
1	A red numbered marker on a screenshot. It points at the part of the screen that the matching step or table row describes. The markers are added for this guide and do not appear in the app.
Who uses this	The roles that normally do the task. If a page is missing from your menu, your role does not include it.
Tip	A faster way, or something that saves a mistake.
Take care	An action that cannot be undone, or that changes stock or money.

The screenshots show a demonstration clinic with made-up patients, medicines and bills. No real patient appears anywhere in this guide. Amounts are in Indian rupees and dates are in day/month/year order, as in the app.

CHAPTER 1

Getting started

This chapter covers what every member of staff needs on day one: signing in, finding your way around the screen, searching, and the tools in the top bar. The rest of the guide is organised by the menu on the left of the screen.

1.1 Sign in

WHO USES THIS Everyone

Open the clinic's address in a browser. The sign-in page asks for the phone number or email address your clinic admin registered for you, and your password.

After you sign in, the app opens the page that fits your role. Doctors and admins land on the Dashboard. Pharmacy staff land on the pharmacy screens.

1. Type your registered phone number or email in **Phone or email**.
2. Type your password.
3. Click **Sign in**.

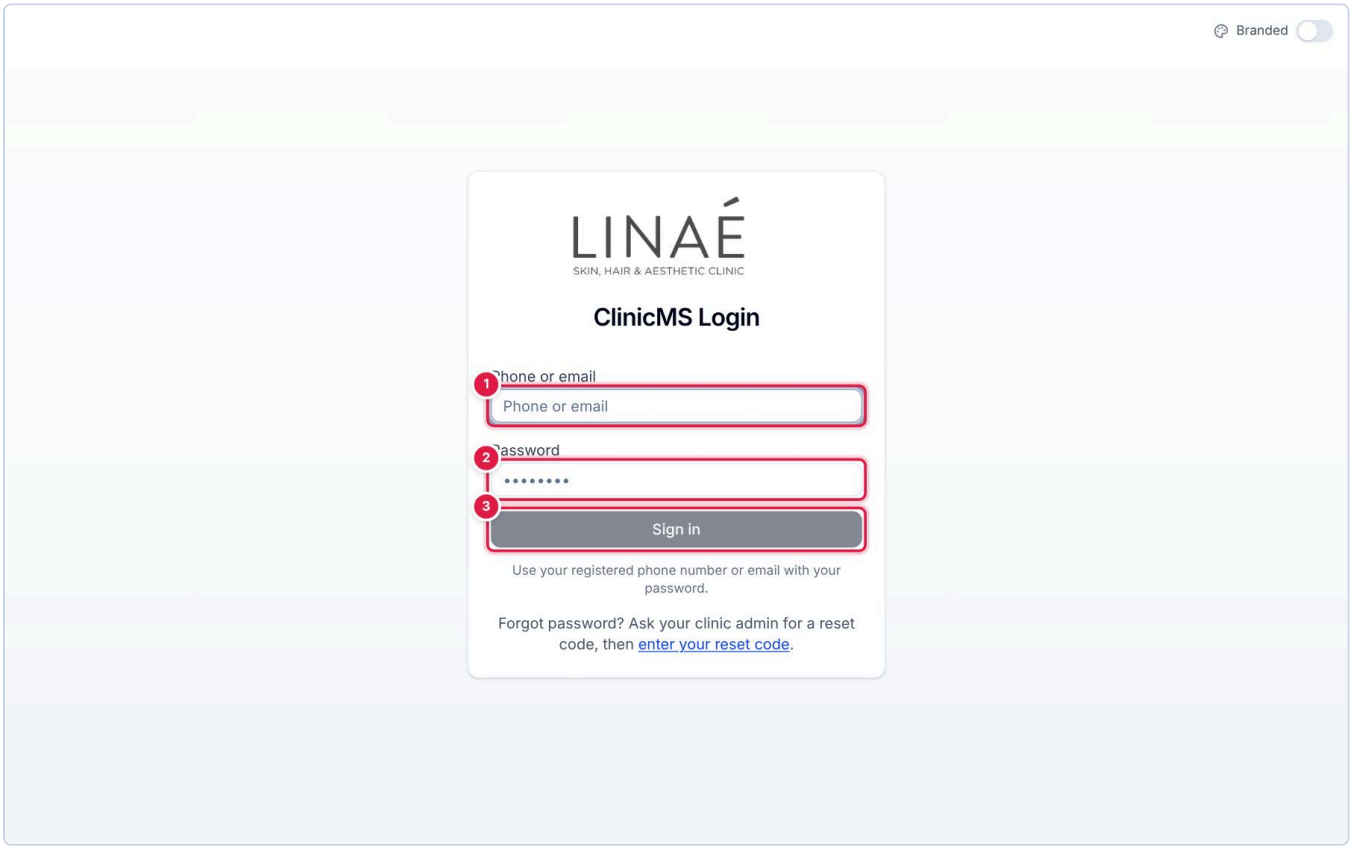


Figure 1.1. The sign-in page.

> **TIP**
> If the page says the details are wrong, check Caps Lock first. After several wrong attempts the app makes you wait before trying again.

1.2 Reset a forgotten password

WHO USES THIS Everyone

The app does not email reset links. Your clinic admin creates a one-time reset code for you from the Users page (see the Users chapter). The code has 8 characters, works once and expires after 24 hours.

1. Ask your clinic admin for a reset code.
2. On the sign-in page, click **enter your reset code**.
3. Type the code, then your new password twice. The password needs at least 8 characters.
4. Click **Set new password**, then sign in with the new password.

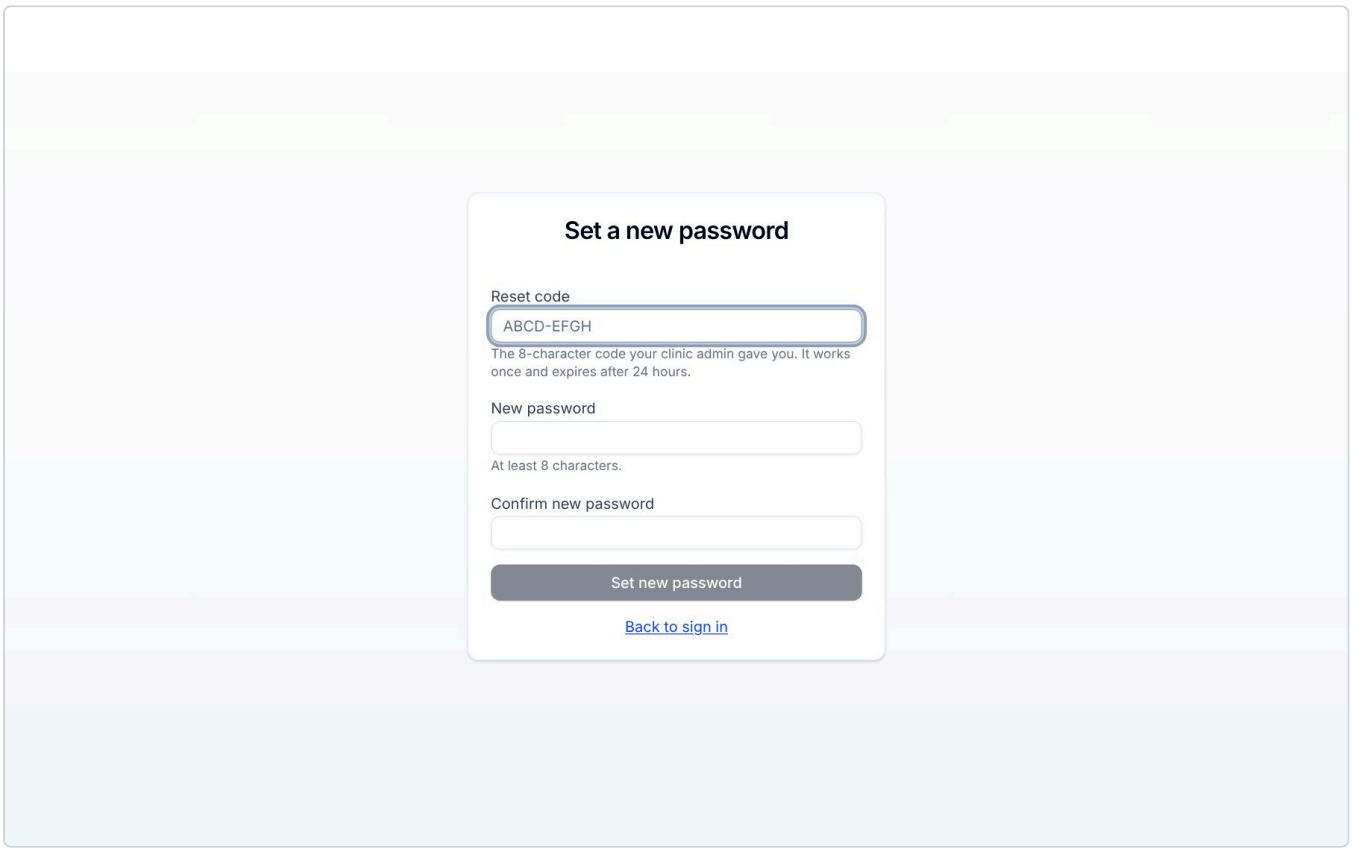

Figure 1.2. Set a new password with the reset code from your admin.

1.3 The parts of the screen

WHO USES THIS Everyone

Every page has the same frame. Learn these four areas once and you can find anything.

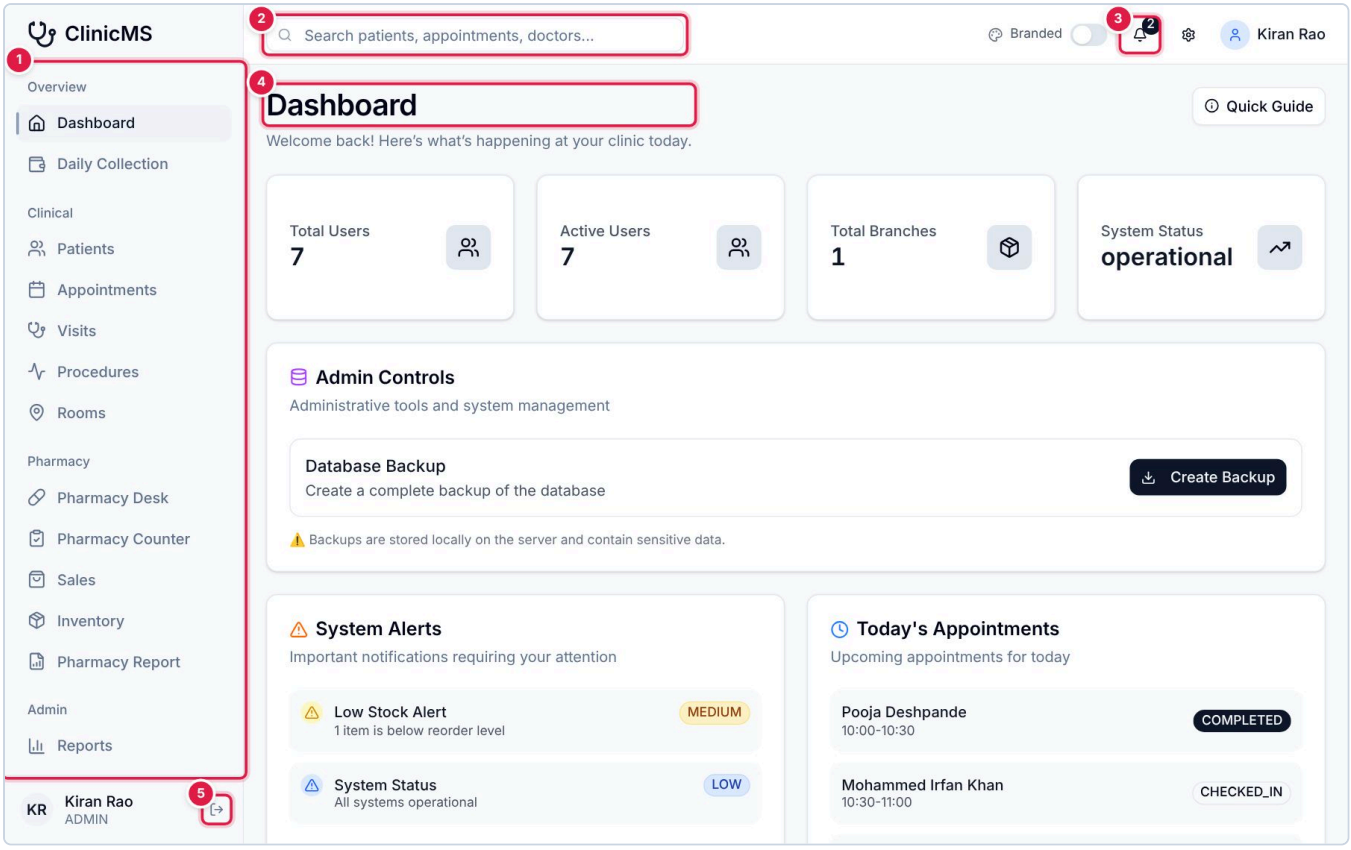

Figure 1.3. The Dashboard, with the five areas of the screen marked.

ON THE SCREEN	WHAT IT MEANS
1. Menu	The list on the left. It is grouped into Overview, Clinical, Pharmacy and Admin. You only see the items your role is allowed to use.
2. Search	Finds patients, appointments and doctors from any page.
3. Top bar tools	Branded mode, notifications, your settings and your name.
4. Work area	The page you opened from the menu. Most pages have a **Quick Guide** button at the top right that explains that page.
5. Your account	Your name and role, with the sign-out button beside it.

1.4 Search from anywhere

WHO USES THIS Everyone

The search box at the top works on every page. Type at least two letters of a patient's name, a phone number, or a doctor's name. Results appear under the box as you type. Each result says what it is, such as Patient. Click a result to open it, or press Enter to open the first one.

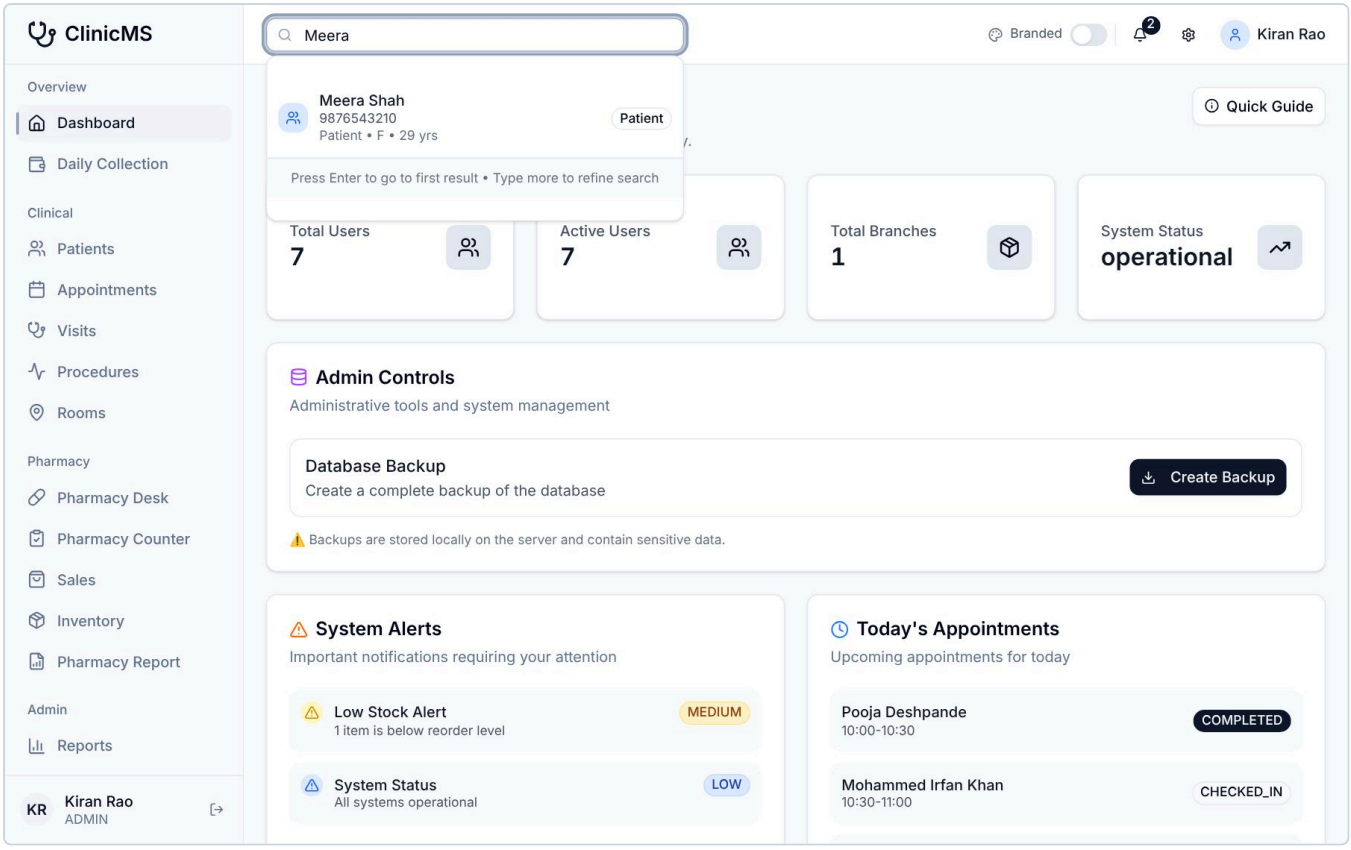

Figure 1.4. Typing a name lists the matching patients. Press Enter to open the first result.

> **TIP**
> Press Esc or click outside the list to close the results.

1.5 Notifications

WHO USES THIS Everyone

The bell shows a red count when something needs attention, such as medicines running low or appointments coming up. Click the bell to read the list. Clicking a notification opens the page where you can act on it.

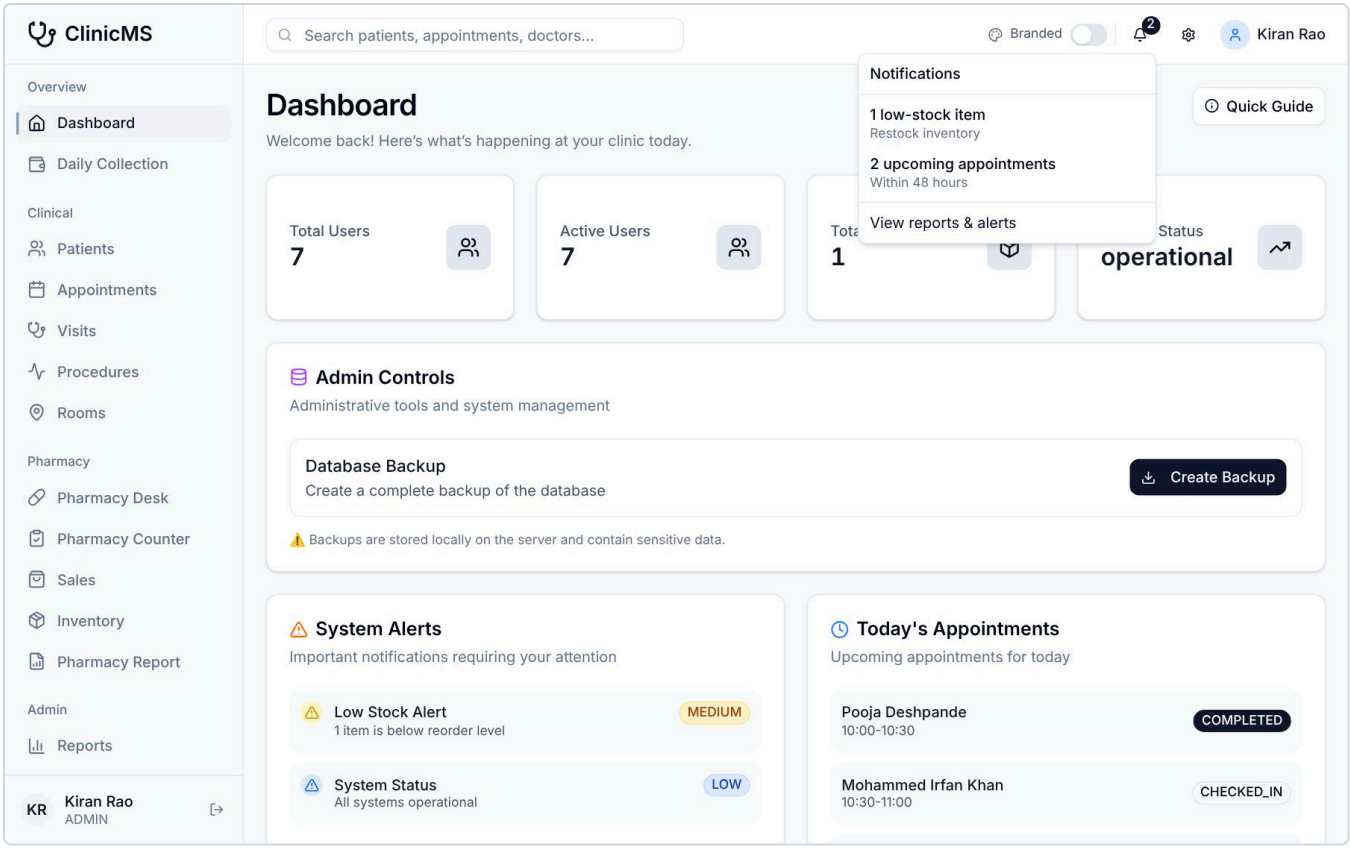

Figure 1.5. The notifications list under the bell.

1.6 My Settings

WHO USES THIS Doctors (other roles see a shorter window)

The gear icon opens **My Settings**. For a doctor this is where the things that print on a prescription are set up, along with working hours and WhatsApp confirmations.

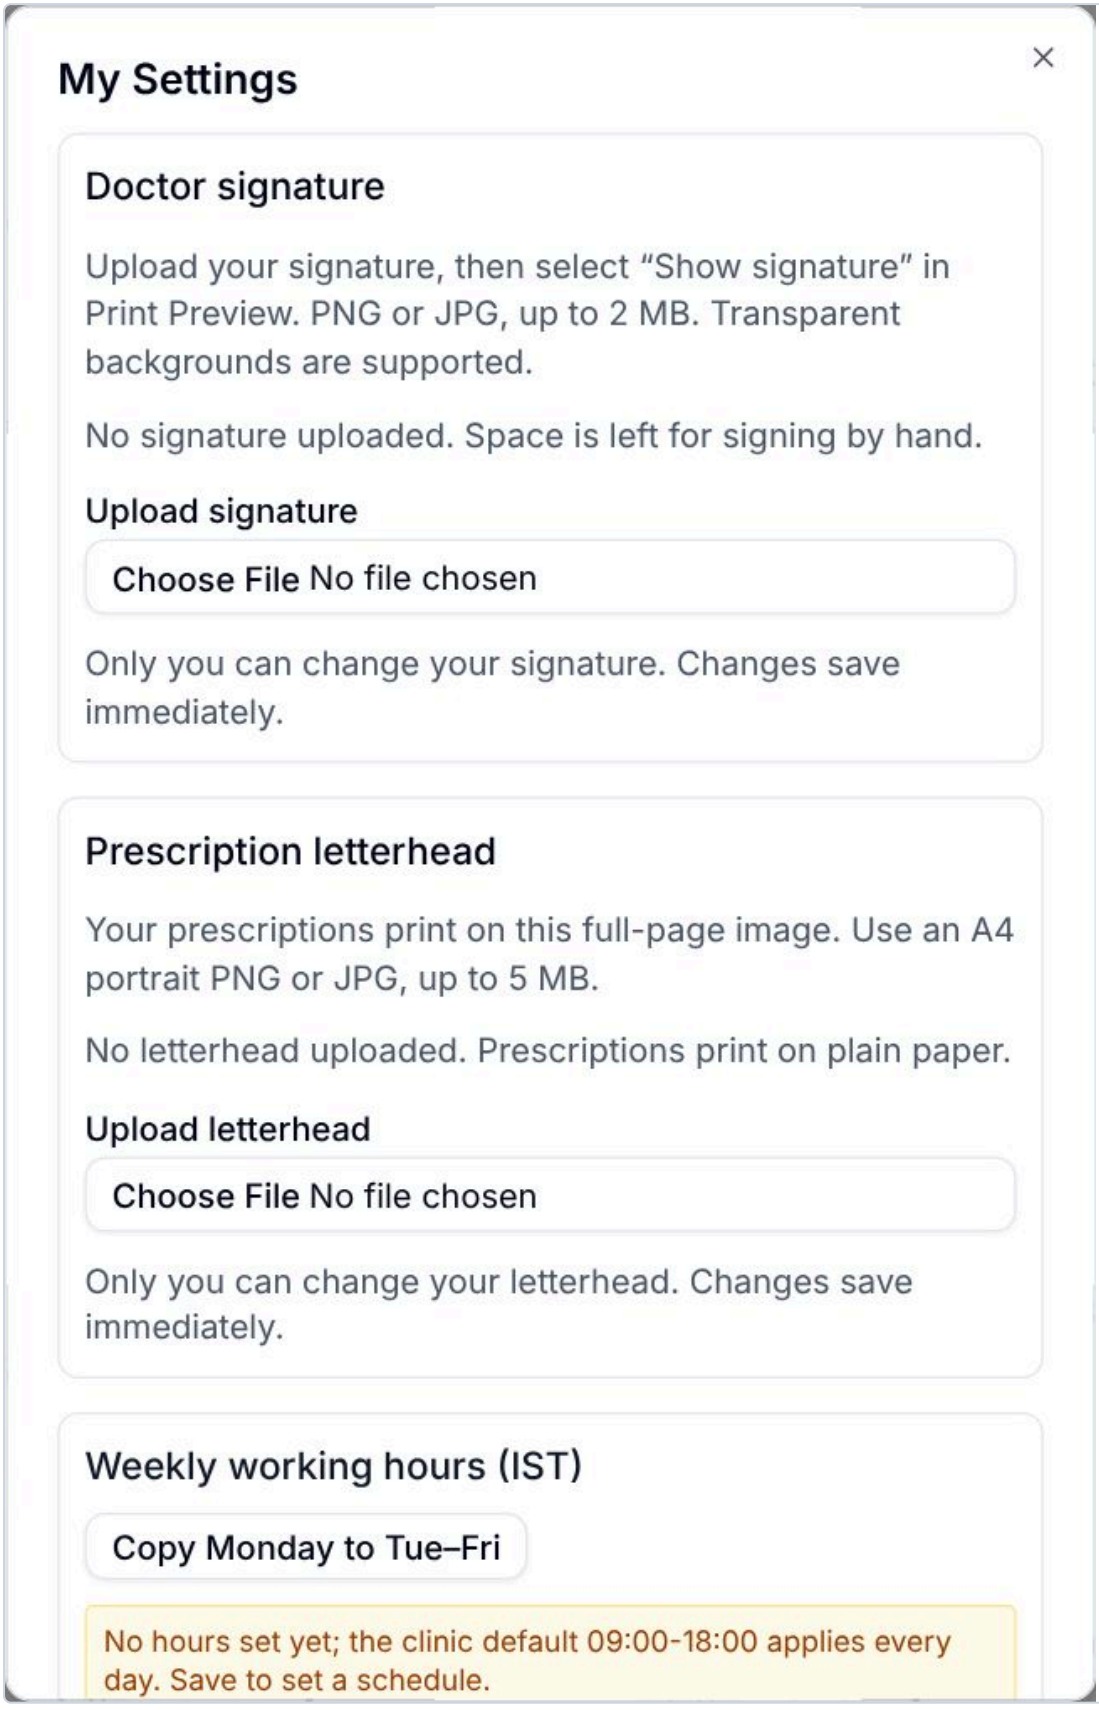

Figure 1.6. My Settings for a doctor: signature, letterhead, availability and WhatsApp.

ON THE SCREEN	WHAT IT MEANS
Signature	Upload a picture of your signature. It prints above your name on prescriptions when **Show signature** is ticked in the print preview.
Letterhead	Upload your own letterhead image. Prescriptions you print use it as the page background.
Availability	Your working days and hours. The appointment calendar offers only these times.
Send WhatsApp on appointment creation	Sends the patient a confirmation message when an appointment is booked with you. The clinic's WhatsApp account must be connected first.
Use WhatsApp Template	Sends an approved template message. Needed when messaging a patient who has not written to the clinic in the last 24 hours.

1.7 Branded mode

WHO USES THIS Everyone

The **Branded** switch in the top bar changes the app's colours and logo to the clinic's own branding. It only changes how the app looks on your computer. Nothing about your data changes.

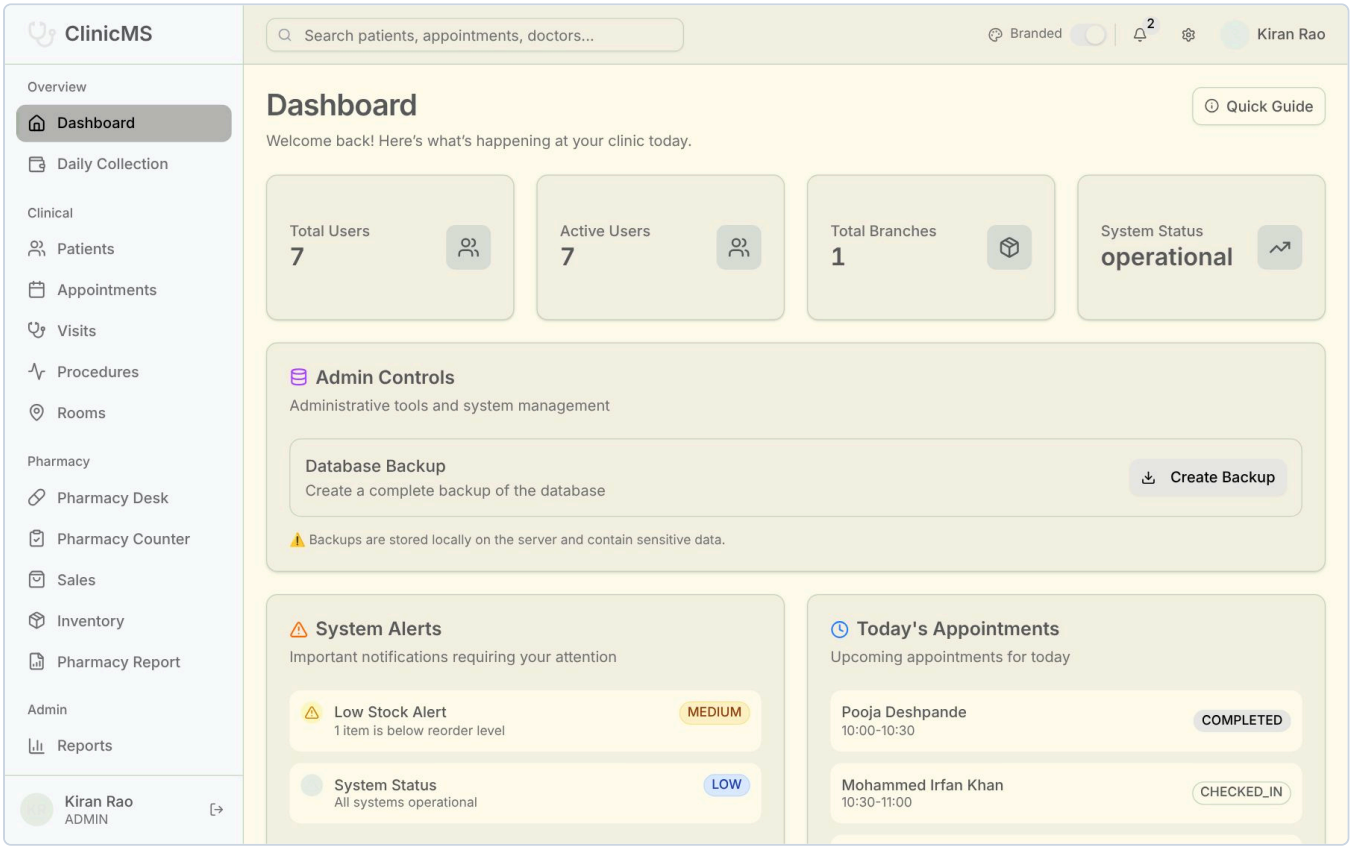

Figure 1.7. The same Dashboard with Branded mode switched on.

1.8 Quick Guides and tours

WHO USES THIS Everyone

Most pages have a **Quick Guide** button at the top right. It opens a short explanation of that page, written for the people who use it. Doctors and reception staff also have guided tours. A tour points at each part of the screen in turn and explains it. It starts only when you click its button, and you can skip it at any step and start it again later. The Dashboard chapter shows both tours.

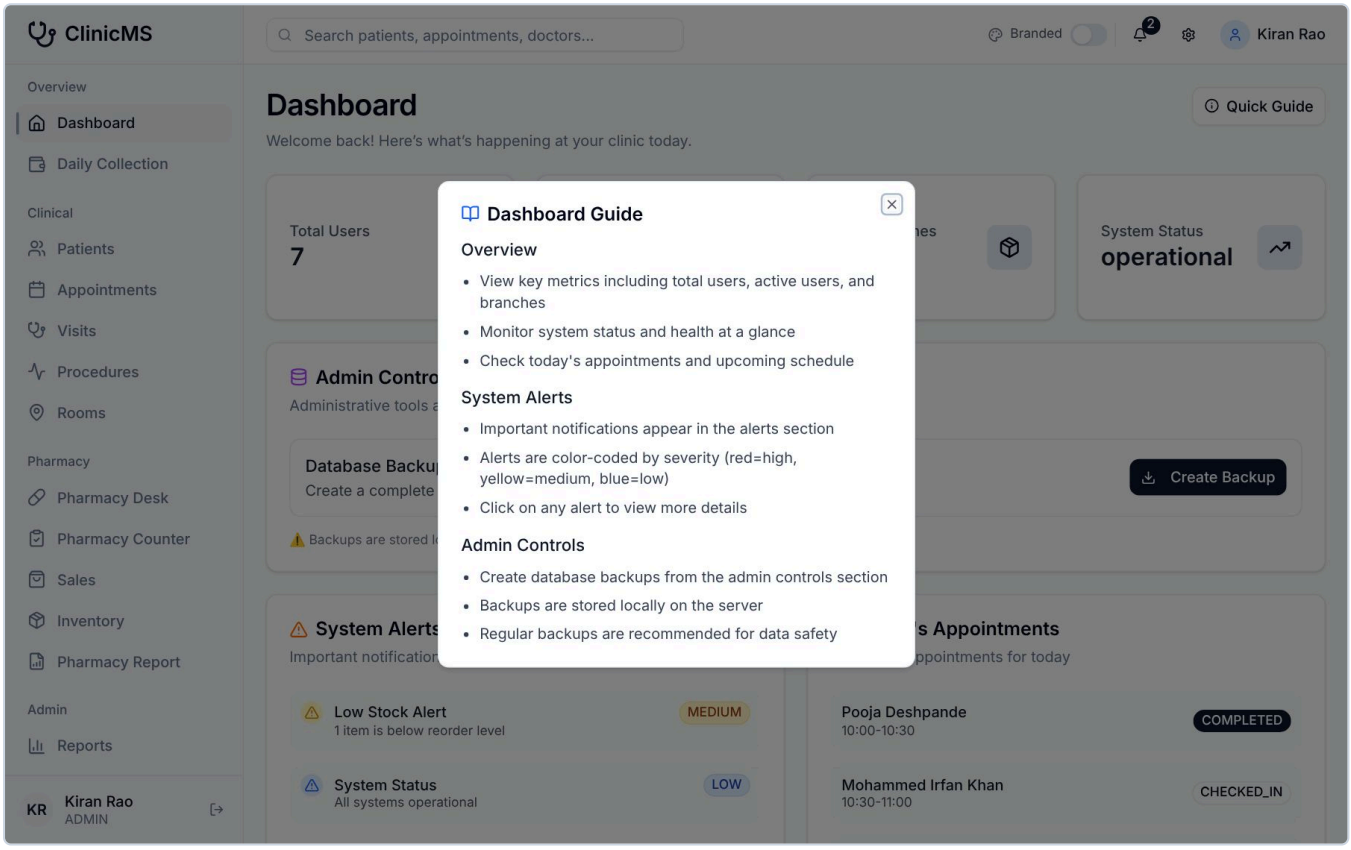

Figure 1.8. The Quick Guide for the Dashboard.

1.9 What each role sees

WHO USES THIS Admins and owners decide roles

The menu is different for each role. If a page in this guide is missing from your menu, your role does not include it. Ask your clinic admin to change your role or permissions on the Users page.

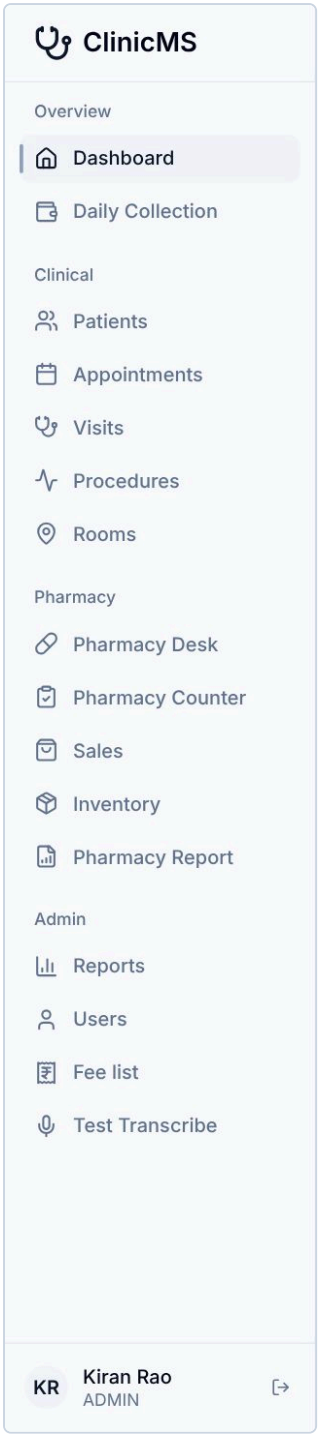

Figure 1.9. Admin

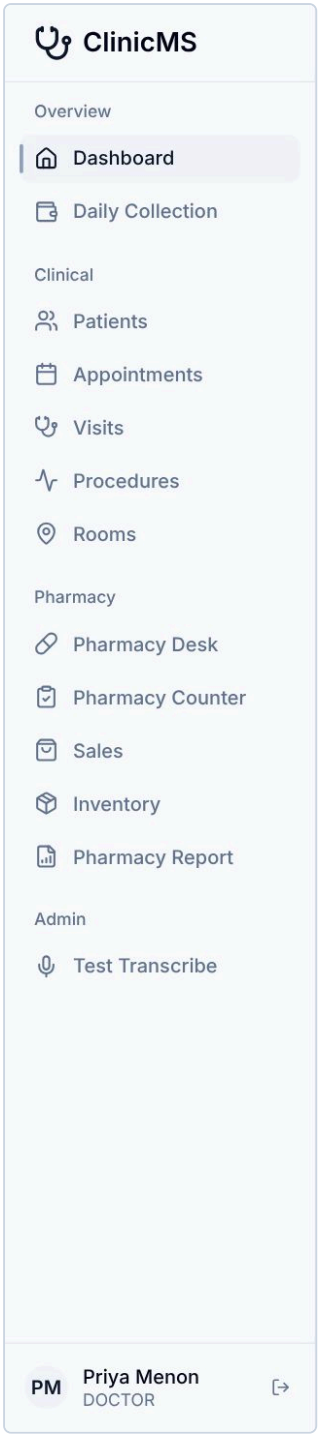

Figure 1.10. Doctor

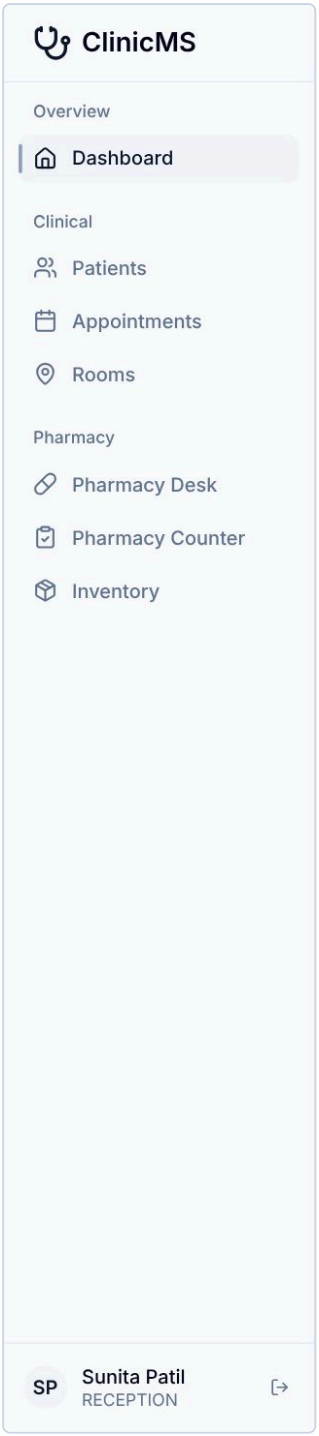

Figure 1.11. Reception

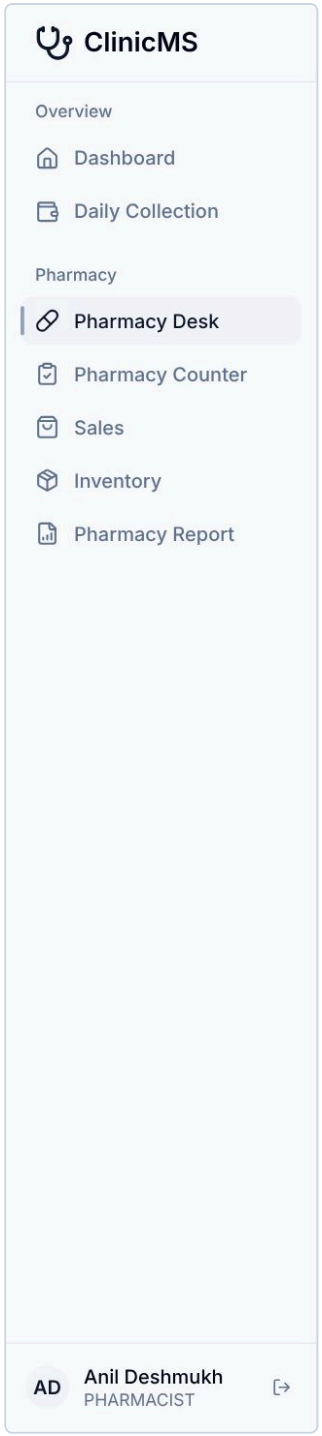

Figure 1.12. Pharmacist

ON THE SCREEN	WHAT IT MEANS
Admin / Owner	Everything, including Reports, Users and the Fee list.
Doctor	Dashboard, Patients, Appointments, Visits, Procedures, Rooms, the pharmacy screens, Inventory and Pharmacy Report.
Reception	Dashboard, Patients, Appointments, Rooms, Pharmacy Desk and Counter, and Inventory.

Pharmacist	Pharmacy Desk, Pharmacy Counter, Sales, Inventory, Pharmacy Report and Daily Collection.
Nurse	Dashboard, Patients, Appointments, Visits and Rooms.

1.10 Sign out

WHO USES THIS Everyone

Click the arrow beside your name at the bottom of the menu. On a shared computer, always sign out before you leave the desk.

CHAPTER 2

Dashboard

The Dashboard is the first page most staff see after signing in. It shows the clinic's numbers at a glance, the alerts that need attention and today's appointments. Doctors also see their recent visits and their own patients. What appears depends on your role.

2.1 Read the Dashboard

WHO USES THIS Admins and owners

Open **Dashboard** at the top of the menu. An admin or owner sees four areas, marked in the picture below. Wait a moment after the page opens: grey boxes show while the numbers load.

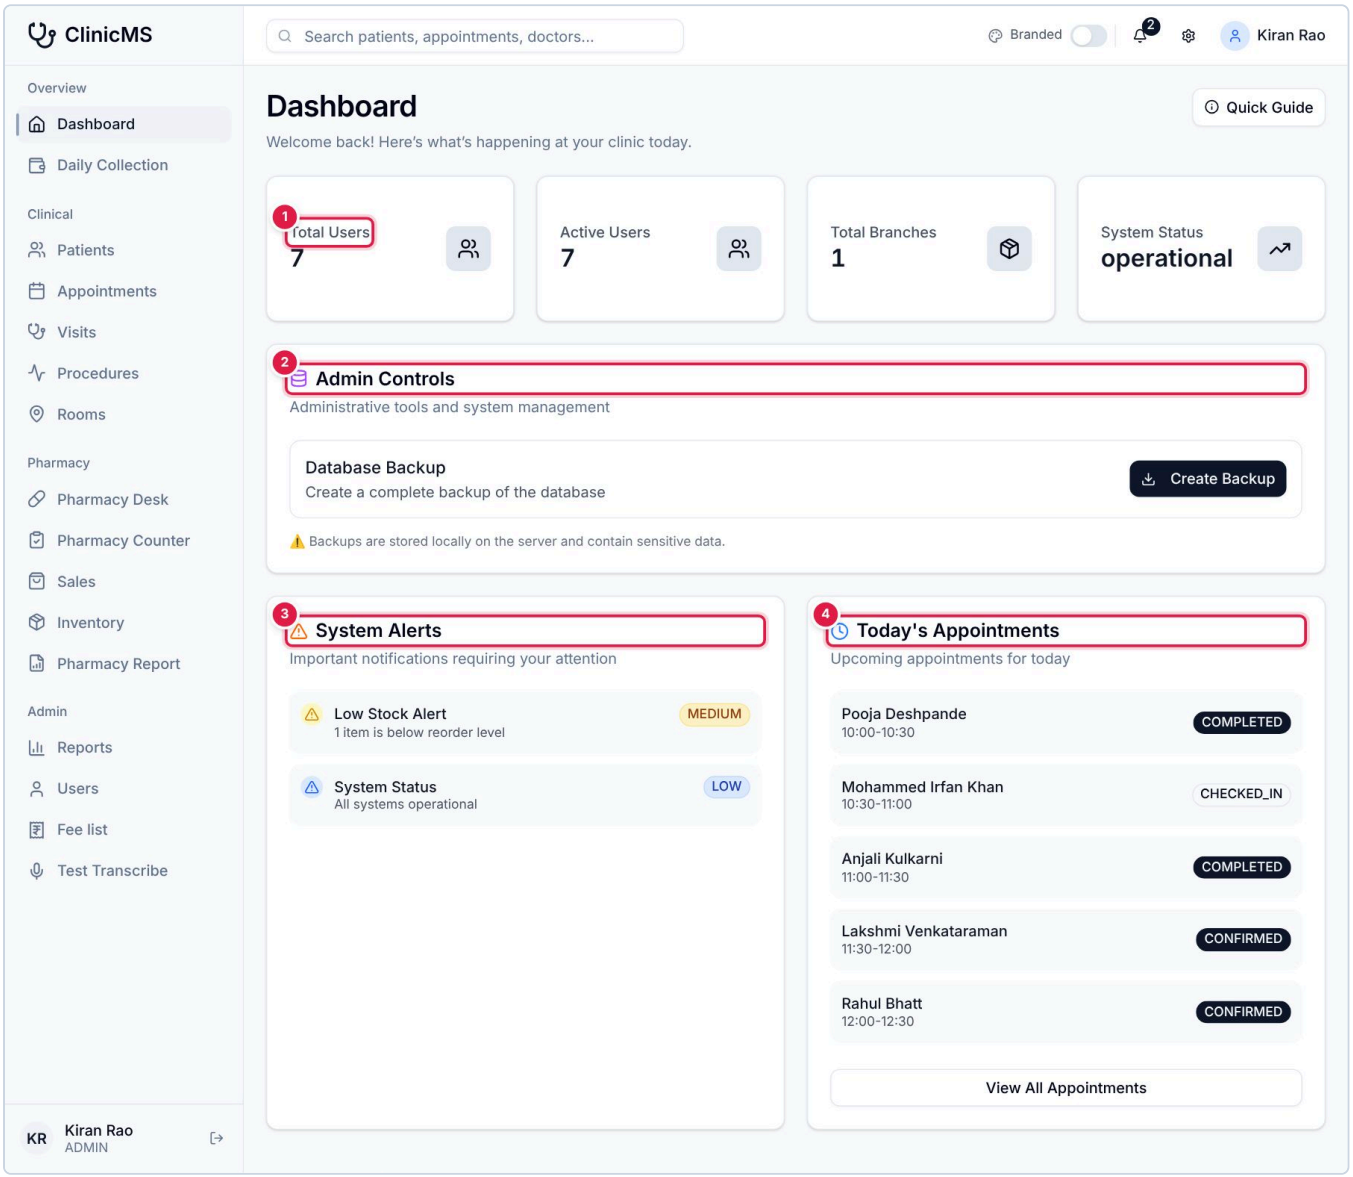

Figure 2.1. The Dashboard for an admin.

ON THE SCREEN	WHAT IT MEANS
1. Counters	Four boxes with the clinic's totals. See the table below.
2. Admin Controls	The database backup. Admins and owners only.
3. System Alerts	Things that need someone's attention, such as stock running out.
4. Today's Appointments	The first appointments of the day, in time order.
Quick Guide	The button at the top right. It opens a short explanation of this page.

2.2 The counters

WHO USES THIS Everyone who sees the Dashboard

The four boxes across the page count the clinic's staff accounts and branches. They are the same for every role.

ON THE SCREEN	WHAT IT MEANS
Total Users	Every staff account in the clinic, including accounts that are switched off.
Active Users	Staff accounts that can sign in now.
Total Branches	How many clinic branches are set up.
System Status	**operational** when the app is working normally.

2.3 Back up the database

WHO USES THIS Admins and owners

Admin Controls has one tool: **Database Backup**. It makes a complete copy of the clinic's data, including patients, visits, bills and stock, and saves it on the clinic's server. It does not download anything to your computer.

Make a backup before a big change, such as a stock take, and at regular times agreed with whoever looks after your server.

1. Click **Create Backup**. The button changes to **Creating...** while the app works.
2. Read the message that appears. It says whether the backup worked, and if it did, when it was made, where it was saved and its size. Click **OK** to close it.

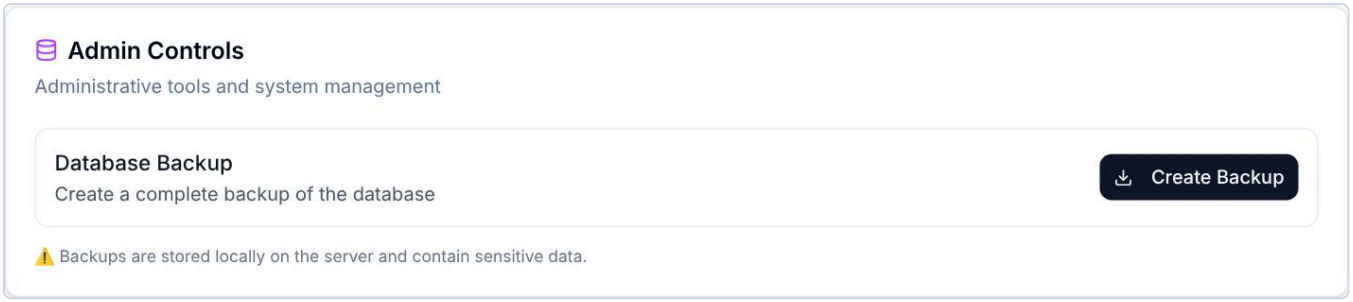

Figure 2.2. Admin Controls with the Create Backup button.

> **TAKE CARE**
> A backup holds every patient's medical and personal details. It stays on the clinic's server. Only the person responsible for the server should copy it anywhere else.
>
> If the message says *Backup Failed*, tell whoever looks after your server. Do not keep clicking the button.

2.4 Act on System Alerts

WHO USES THIS Everyone who sees the Dashboard

System Alerts lists what needs attention, one line per kind of problem. Each line has a coloured badge for how urgent it is. A **System Status** line is always there and says *All systems operational* when nothing is wrong with the app.

Which alerts you see depends on your role. For example, only staff who look after stock see stock alerts.

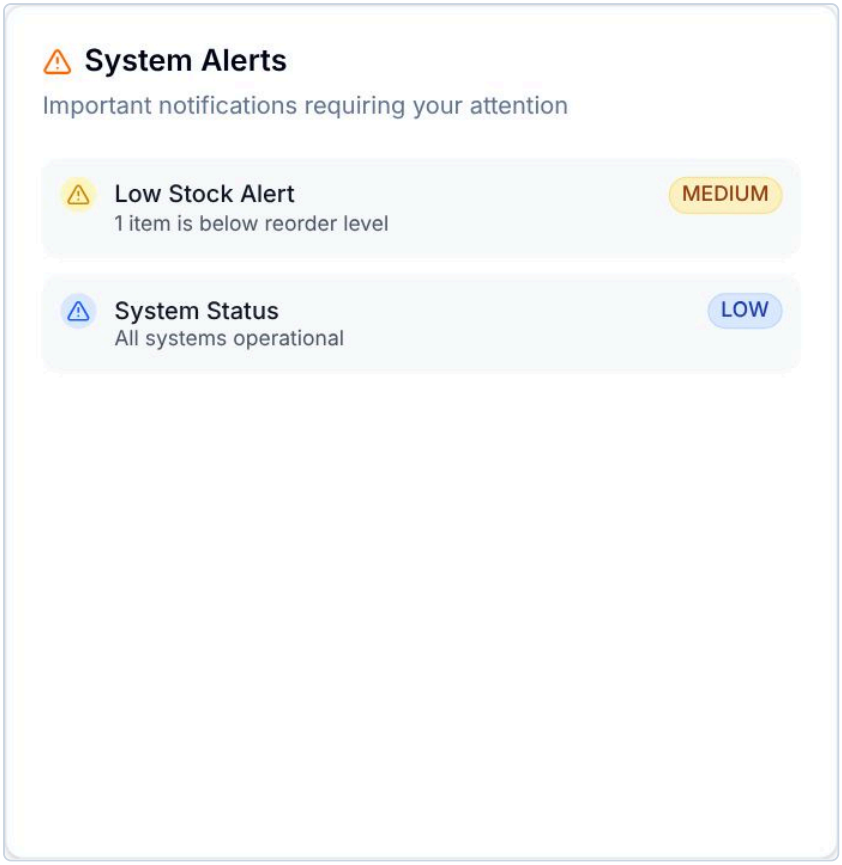

Figure 2.3. System Alerts with one stock alert and the System Status line.

ALERT	WHAT IT MEANS AND WHAT TO DO
Overdue Invoices (HIGH)	Clinic bills that are past their due date, with the total owed. Follow up with the patients.
Low Stock Alert (MEDIUM)	The message says how many items are *below reorder level*. It counts medicines whose stock has run out completely (0 left). Order them, or ask the pharmacy. The Inventory page and the Inventory report in Reports show which ones, along with items that are low but not yet out.
Expiring Items (MEDIUM or HIGH)	Medicines that expire within 30 days. The badge is HIGH when any expire within 7 days. The Expiring Stock report in Pharmacy Report lists the batches.
Pending Payments (LOW)	Card or online payments still waiting to be matched with the bank.
System Status (LOW)	Always shown. *All systems operational* means the app is working.

Badge colours: red **HIGH** needs action today, yellow **MEDIUM** needs action soon, blue **LOW** is for information.

If the box says *Couldn't load clinic alerts*, click **Try again**. If it says your account does not have access, ask your admin to check your role.

2.5 See today's appointments

WHO USES THIS Admins, owners, managers, doctors, nurses and reception

Today's Appointments shows today's bookings in time order, each with the patient's name, the time slot and its status. Admins, nurses and reception see the first five for the whole clinic. A doctor sees every appointment booked with them today.

Click **View All Appointments** to open the full appointment calendar.

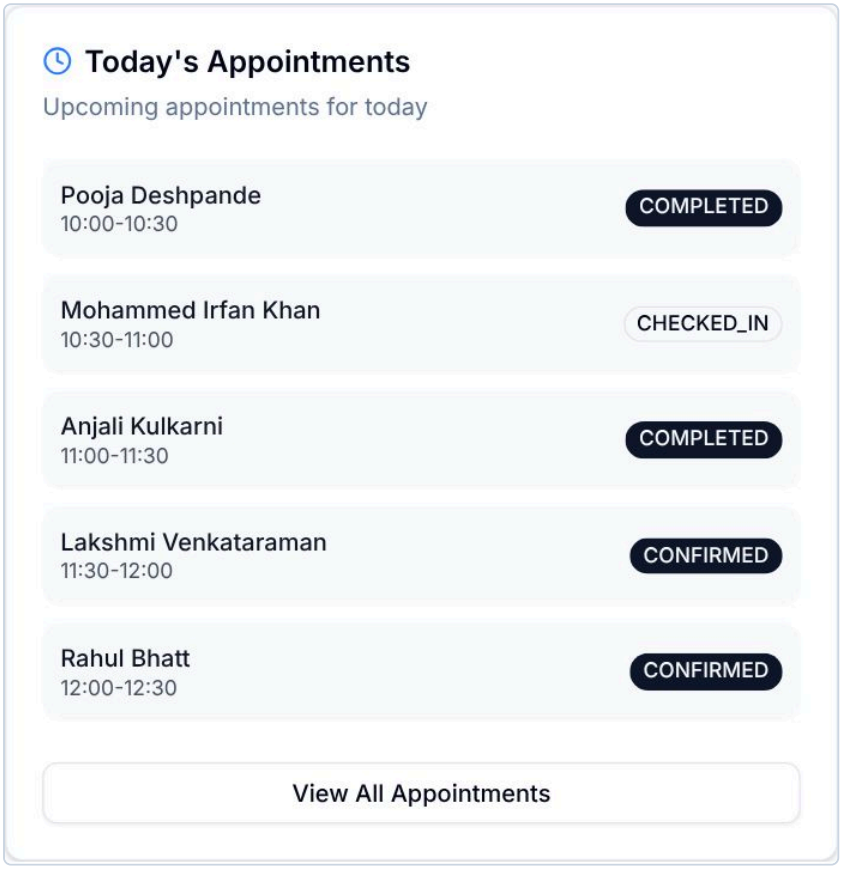

Figure 2.4. Today's Appointments as reception sees it.

STATUS	WHAT IT MEANS
SCHEDULED	Booked, not yet confirmed with the patient.
CONFIRMED	The patient has confirmed they are coming.
CHECKED_IN	The patient has arrived and is waiting.
IN_PROGRESS	The patient is with the doctor now.
COMPLETED	The visit is finished.
CANCELLED / NO_SHOW	The appointment was cancelled, or the patient did not come.

> **TIP**
> If there are no bookings today the box says *No appointments scheduled for today*.

2.6 Your patients and recent visits (doctors)

WHO USES THIS Doctors

A doctor's Dashboard starts with two extra boxes, above the counters.

Recent Visits lists your last eight consultations, newest first, with the patient's name, the first diagnosis and the date and time. Click a visit to open it on the Visits page.

My Patients lists the patients who have you as their primary doctor. The number in brackets is how many there are. Each row shows the patient code, phone number and the date of their last visit. Click a patient to open their record.

1. To find one of your patients, type at least two letters of their name, phone number or patient code in **Search by name, phone or code**.
2. When you have more than ten patients, use **Previous** and **Next** under the list to move between pages.

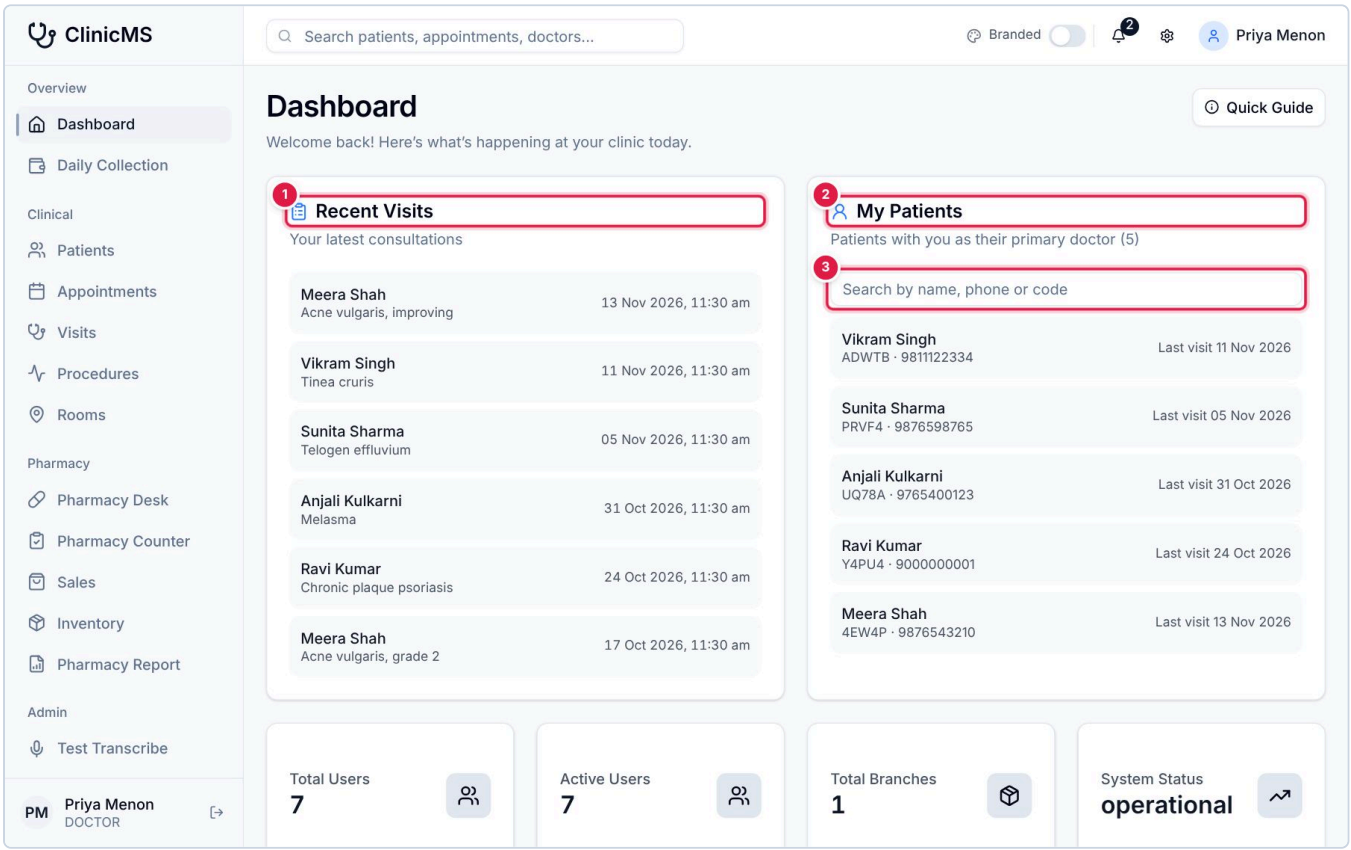

Figure 2.5. The top of a doctor's Dashboard: Recent Visits and My Patients.

Below these boxes a doctor sees the counters, System Alerts and their own Today's Appointments. Doctors do not see Admin Controls.

2.7 What reception and pharmacy staff see

WHO USES THIS Reception, pharmacists

Reception see the counters, System Alerts and Today's Appointments. They also have a **Start Tour** button in the top bar (see the next section).

Pharmacists see the counters and System Alerts only, because they do not work with appointments. After signing in they go straight to the pharmacy screens; the Dashboard is still in their menu.

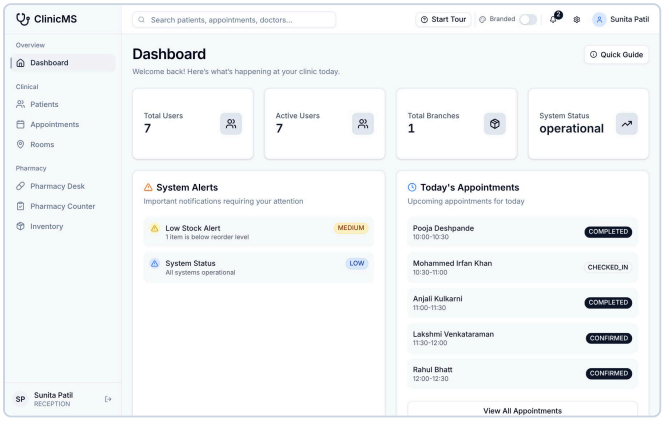

Figure 2.6. Reception: note the Start Tour button at the top.

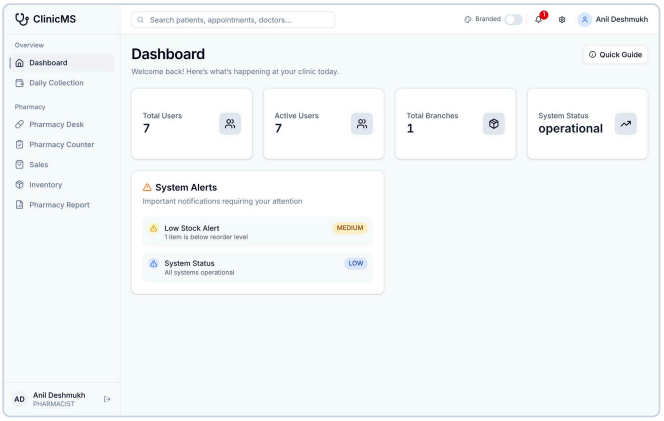

Figure 2.7. Pharmacist: counters and alerts, no appointments.

2.8 Take the reception tour

WHO USES THIS Reception

The tour walks you through a page one part at a time. A box points at each part and explains it. It is there for new staff and for anyone who wants a reminder. It only starts when you click the button.

The tour exists for the Dashboard, Appointments, Patients, Rooms and the Pharmacy Desk and Counter. On the Dashboard it has four steps: a welcome, the menu, the counters and Today's Appointments.

1. Click **Start Tour** at the top of the screen. The page goes dark except for the part being explained.
2. Click **Next →** to move on, or **← Back** to go back. The dots and the bar at the bottom of the box show how far you are.
3. Click **Finish** on the last step.
4. To leave early, click the red ✕, press Esc, or click the dark area outside the box.
5. To see the tour again, open the page and click **Start Tour** again. It can be replayed as often as you like.

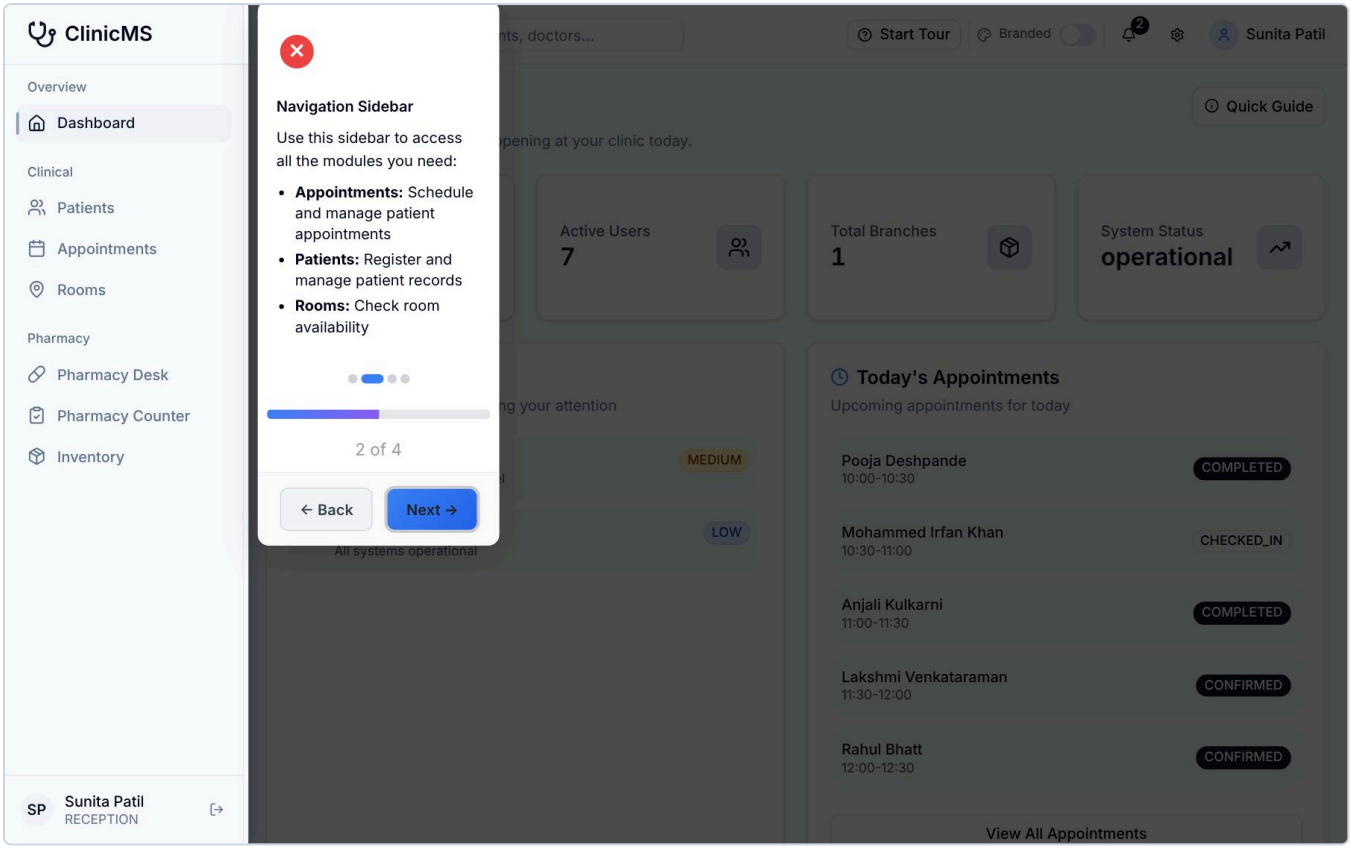

Figure 2.8. The reception tour on the Dashboard, pointing at the menu.

2.9 Take the doctor's visit tour

WHO USES THIS Doctors

Doctors have a longer tour of the visit screen, where consultations are written. It explains the visit from start to finish in 18 steps: the patient panel, the tabs, vitals, photos, the prescription builder, dermatology features, lab tests, history, saving, printing, completing the visit, voice dictation, keyboard shortcuts and data safety. It takes five to seven minutes.

1. Open a visit. For example, click a visit under **Recent Visits** on your Dashboard.
2. Click **Visit Workflow Tour** at the top of the visit form, beside **Shortcuts**.
3. Use **Next →**, **← Back** and **Finish** as in the reception tour. Click the red ✕ or press Esc to stop. Click **Visit Workflow Tour** again whenever you want to restart it.

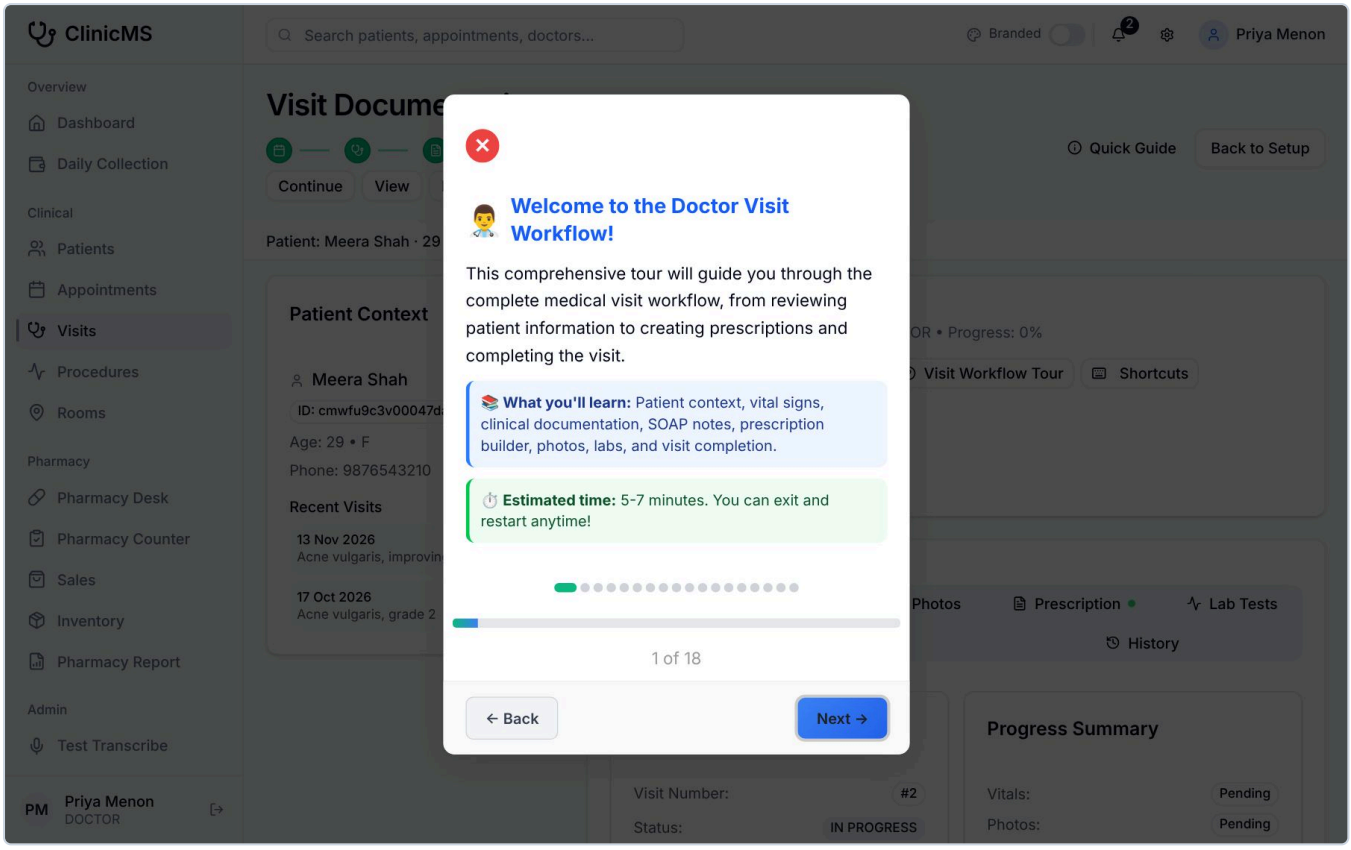

Figure 2.9. The first step of the Visit Workflow Tour.

CHAPTER 3

Patients

Every person the clinic sees has a patient record. Reception registers new patients and keeps their details up to date. Doctors open a patient's page to see their visits, prescriptions and photos before starting a consultation. This chapter covers the Patients list and the page for one patient.

3.1 Find your way around the Patients list

WHO USES THIS Reception, doctors, nurses, admins

Open **Patients** from the menu. The page lists the clinic's patients, newest registrations first, 20 to a page. Click anywhere on a row to open that patient's page.

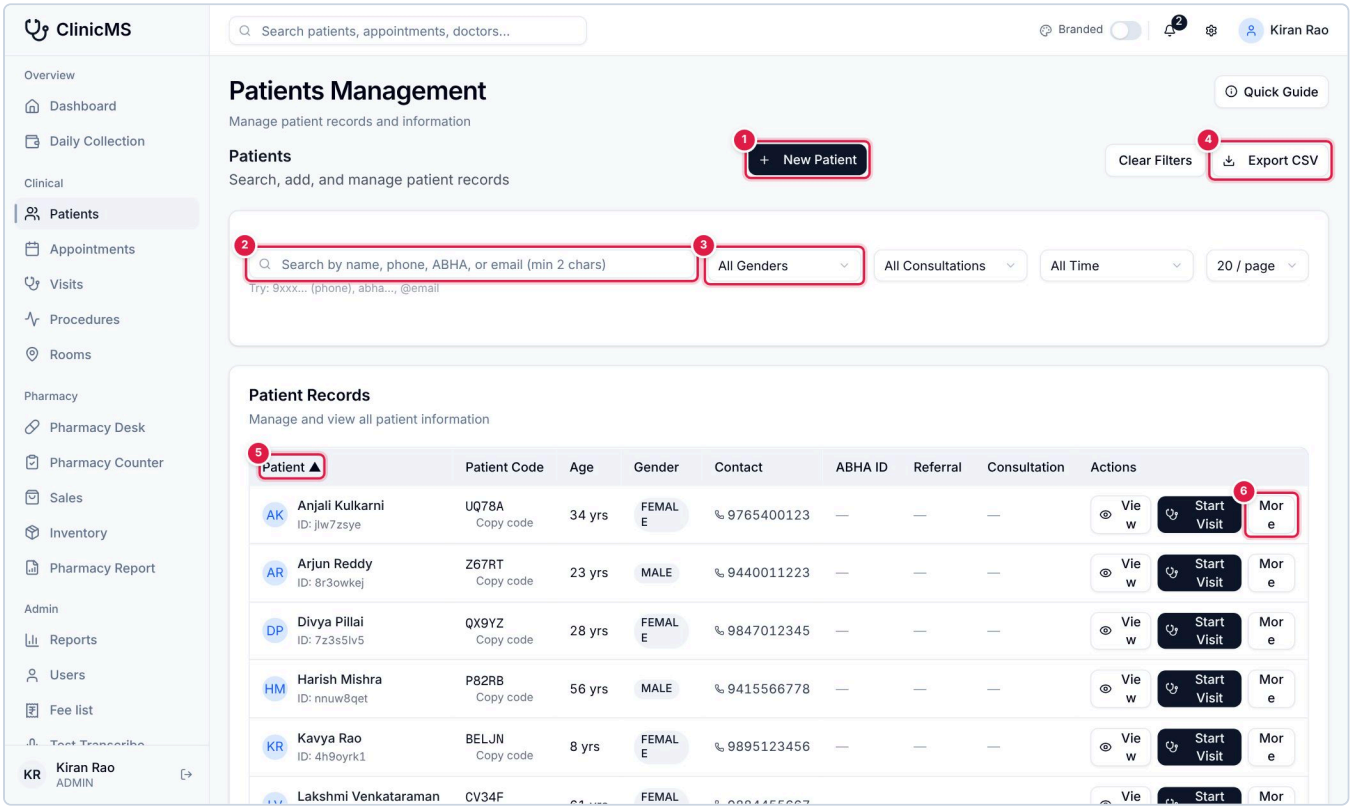

Figure 3.1. The Patients list.

MARKER	WHAT IT IS
1. New Patient	Opens the form to register a patient.
2. Search	Finds patients by name, phone, ABHA number, patient code or email.
3. Filters	Gender, consultation type, date range and how many patients to show on a page.

4. Clear Filters and Export CSV	Clear Filters empties the search and resets every filter. Export CSV saves the list as a spreadsheet file.
5. Column headings	Click **Patient**, **Age**, **Gender** or **Referral** to sort.
6. Row buttons	**View**, **Start Visit** and **More** (Edit, Archive, Link portal, WhatsApp).

Each row shows these columns:

3.2 Read a patient row

WHO USES THIS Everyone who uses Patients

The columns give you the patient's key details without opening the record.

COLUMN	WHAT IT SHOWS
Patient	The name, with initials in a circle. Under the name, **ID** shows the last 8 characters of the patient's internal number. Click it to copy the full number, for example to give to support staff.
Patient Code	A short 5-character code the app gives every patient when they are registered, for example *U2XK4*. Write it on files or tell it to the patient. You can type it in the search box. Click **Copy code** to copy it.
Age	Age in years.
Gender	MALE, FEMALE or OTHER.
Contact	Phone number, and email if one was given.
ABHA ID	The patient's 14-digit Ayushman Bharat Health Account number, if recorded.
Referral	How the patient heard about the clinic, for example INSTAGRAM or FRIENDS_FAMILY.
Consultation	Online or Offline, when the list has it. A dash means it is not shown.
Actions	**View** opens the patient's page. **Start Visit** opens the Visits page with a new visit for this patient. **More** opens the menu of other actions.

3.3 Search for a patient

WHO USES THIS Reception, doctors

Search before you register someone, so you do not create the same patient twice. The search needs at least two characters. It matches part of a name, the start of a phone number, an ABHA number, the start of a patient code, or part of an email address.

1. Click in the search box.
2. Type part of the name or the first digits of the phone number, for example *Sha*.

3. Wait a moment. The list shows only the matching patients.
4. Click the row to open the patient.

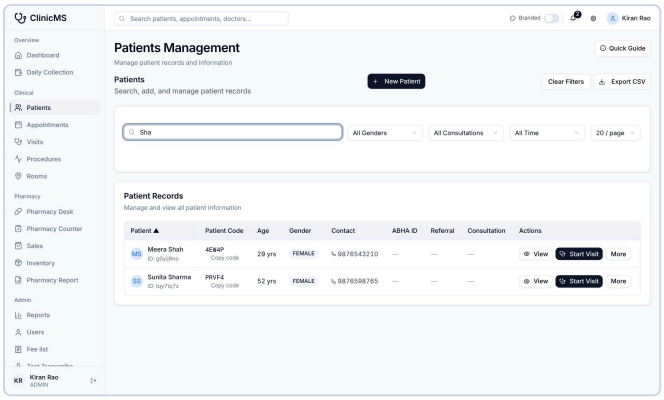

Figure 3.2. Searching for “Sha” finds Meera Shah and Sunita Sharma.

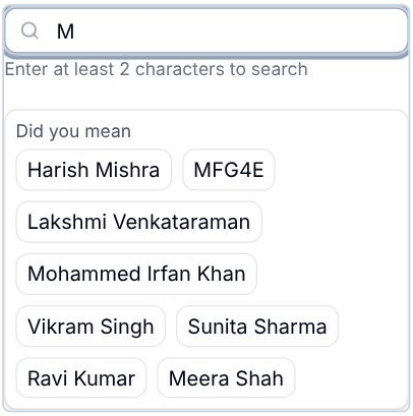

Figure 3.3. With one letter typed, the list suggests names from the page.

> **TIP**
> If you type only one letter, the box says *Enter at least 2 characters to search* and offers **Did you mean** suggestions from the patients on the page. Click a suggestion to search for it.

3.4 Filter, sort and page through the list

WHO USES THIS Reception, admins

The filters narrow the list to a group of patients, for example the women registered or seen this month. Filters and the search work together.

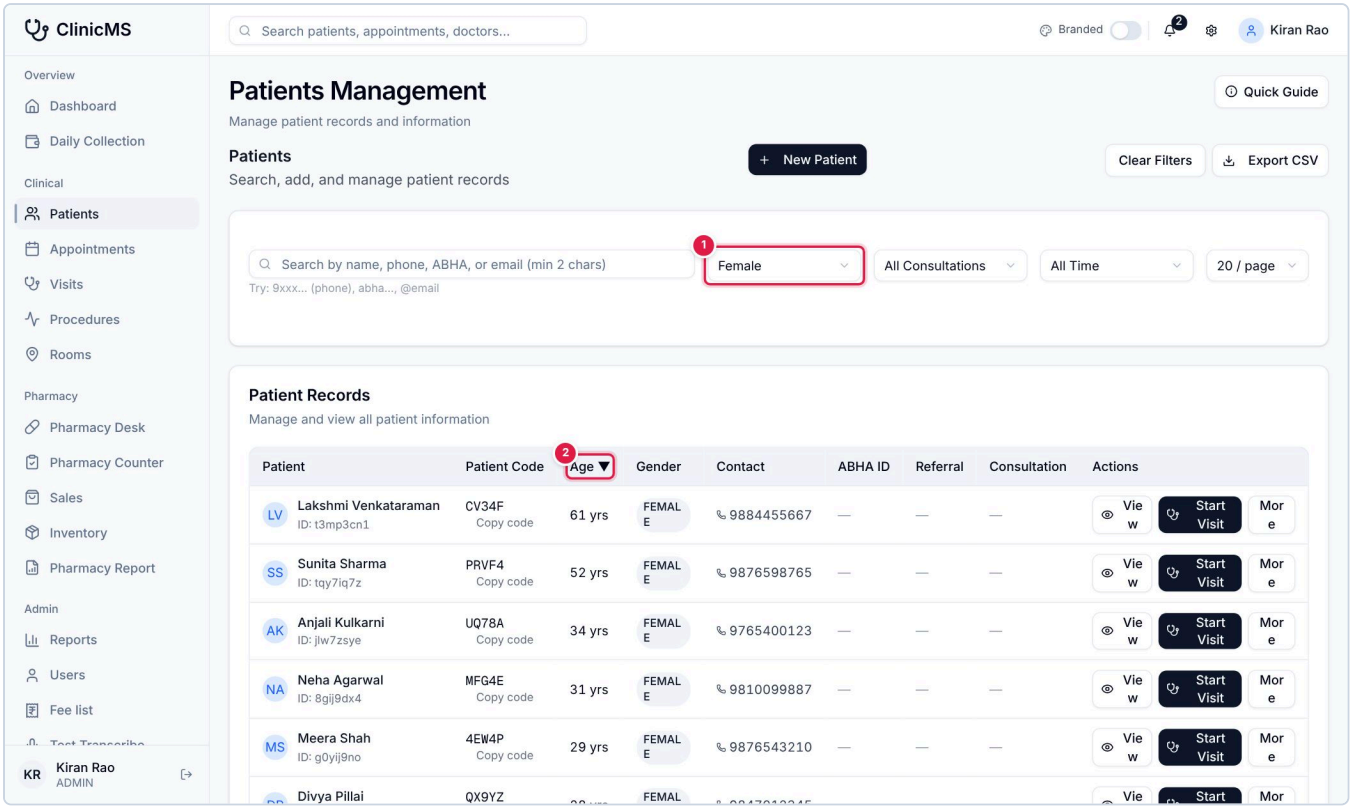

Figure 3.4. Female patients, sorted by age with the oldest first.

Figure 3.5. With 10 patients a page, page buttons appear under the list.

CONTROL	WHAT IT DOES
All Genders	Choose Male, Female or Other to show only those patients.
All Consultations	Choose Online or Offline to show only patients with that consultation type.
All Time	**Last 1 Week** or **Last 1 Month** shows patients who were registered, or had a visit, in that time.
20 / page	Shows 10, 20 or 50 patients on a page. The app remembers your choice on this computer.
Previous, page numbers, Next	Appear under the list when there is more than one page. The text beside them says, for example, *Showing 1 to 10 of 14 patients*.
Column headings	Click **Patient**, **Age**, **Gender** or **Referral** to sort by it. A ▲ means smallest first, ▼ largest first. Click again to reverse. Sorting puts the patients on the current page in order.
Clear Filters	Empties the search box and sets every filter back to All.

3.5 Export the patient list

WHO USES THIS Admins, reception

Export CSV saves the patients that match the current search and filters to a file you can open in Excel or Google Sheets. All matching patients are saved, not only the ones on the screen. The file is named *patients_export_* followed by the date.

The file has these columns: ID, Name, Age, Gender, Phone, Email, ABHA ID, Referral, Consultation Type, Portal Linked and Created At.

1. Set the search and filters, or click **Clear Filters** to export everyone.
2. Click **Export CSV**.
3. A message at the top right says how many patients were exported. The file is in your browser's downloads.

Figure 3.6. The message after exporting.

> TAKE CARE
> The file holds patients' personal details. Store it safely and delete it when you no longer need it.

3.6 Register a new patient

WHO USES THIS Reception, doctors

Register a patient the first time they come to the clinic or call to book. Search first to make sure they are not already registered. Only the first name and phone number are required, but the more you fill in now, the less you have to ask later.

1. Click **New Patient**. The **Create Patient** window opens.
2. Type the **First Name** and **Last Name**.
3. Type the **Age (years)** and choose the **Gender**.
4. Type the **Phone** number.
5. Fill in the optional fields described in the table below.
6. Click **Create**. The window closes and the patient appears at the top of the list.

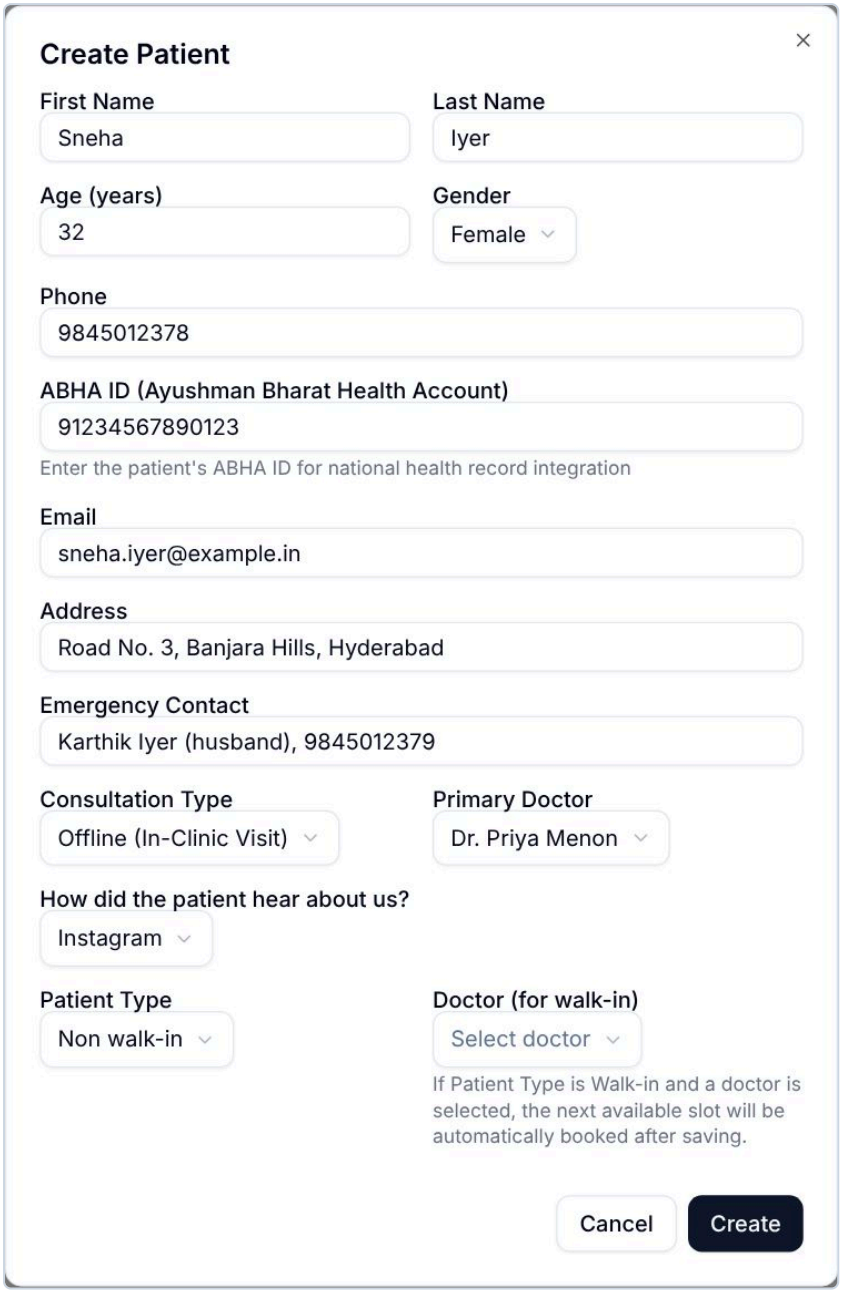

Figure 3.7. The Create Patient window, filled in for a new patient.

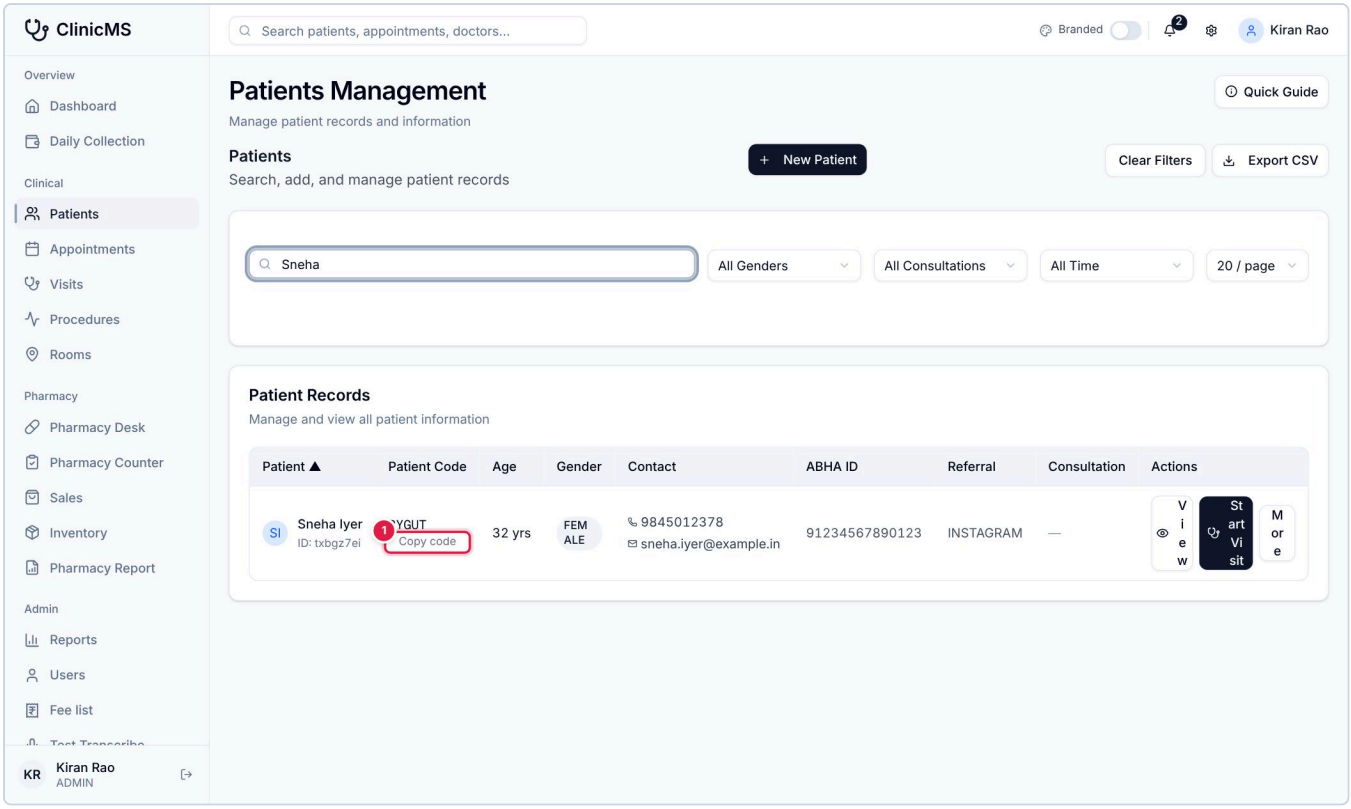

Figure 3.8. Sneha Iyer in the list, with her new patient code.

OPTIONAL FIELD	WHAT TO ENTER
ABHA ID	The patient's Ayushman Bharat Health Account number. It must be exactly 14 digits, with no spaces or dashes. Leave it empty if the patient does not have one.
Email	Used for the patient portal and for sending documents.
Address	Where the patient lives.
Emergency Contact	A name and phone number to call in an emergency.
Consultation Type	**Offline (In-Clinic Visit)** for patients who come in, **Online** for video consultations.
Primary Doctor	The doctor who usually sees this patient. **Automatic** means: if a doctor registers the patient, that doctor; otherwise the first doctor who sees them. **Not assigned** leaves it empty.
How did the patient hear about us?	Instagram, Twitter, Google, Doctor, Friends & Family or Other. The clinic's reports use it to see which referrals bring patients.
Patient Type	**Non walk-in** for most registrations. **Walk-in** books an appointment as well (see the next section).

> **TIP**
> If you leave out the first name or phone, the window says *Please fill in all required fields (Name, Phone)*. If the ABHA ID is not 14 digits, it says *ABHA ID must be a 14-digit number*.
>
> The patient code is given automatically when you click Create. You cannot type it yourself.

3.7 Register a walk-in and book the next free slot

WHO USES THIS Reception

When a new patient walks in without an appointment, you can register them and put them in the doctor's queue in one go. The app finds the doctor's next free 30-minute slot, today or in the next 7 days, and books it in the doctor's **Confirmed** calendar.

1. Click **New Patient** and fill in the patient's details as usual.
2. Set **Patient Type** to **Walk-in**.
3. Choose the doctor in **Doctor (for walk-in)**.
4. Choose the **Appointment Type (walk-in)**: OPD Consultation, Procedure or Telemedicine.
5. Optionally choose a **Room**. For a procedure, pick a free procedure room. Telemedicine has no room.
6. Click **Create**. A message says *Walk-in appointment booked* with the date and time.

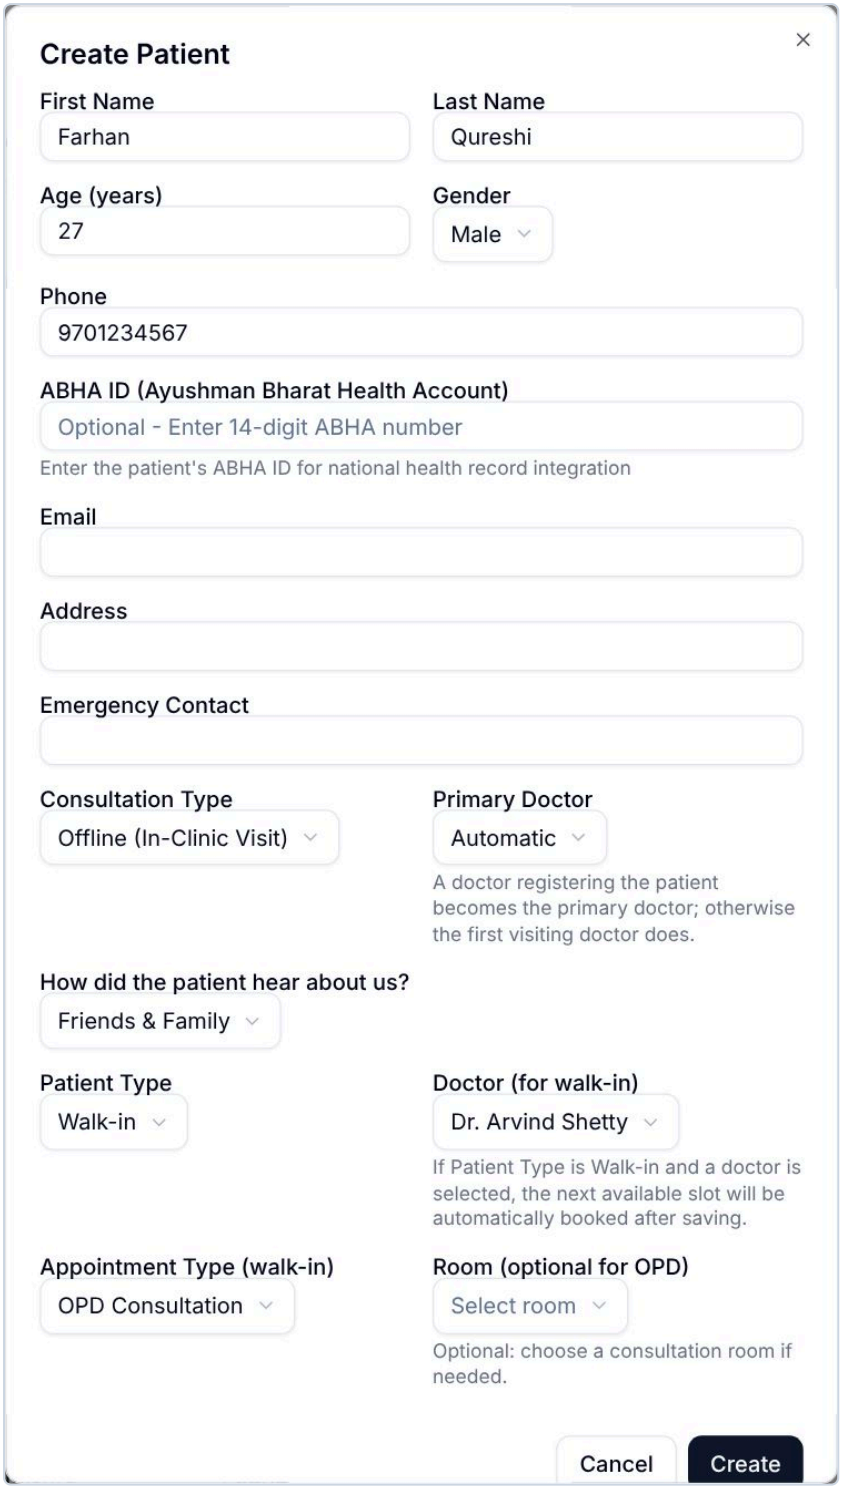

Figure 3.9. A walk-in for Dr. Arvind Shetty.

Figure 3.10. The message confirms the booking in the Confirmed calendar.

TIP

If the doctor has no free slot in the next 7 days, the message says *No slots available*. The patient is still registered. Book them from the Appointments page.

If a doctor allows more than one patient per slot and the slot is already taken, the app asks whether to overbook it. See the Appointments chapter.

3.8 Change a patient's details

WHO USES THIS Reception, doctors

Update the record when a patient changes their phone number, moves house, or gives details they did not have before.

1. Find the patient in the list.
2. Click **More** on their row, then **Edit**. The **Edit Patient** window opens with their details.
3. Change what you need.
4. Click **Save Changes**.

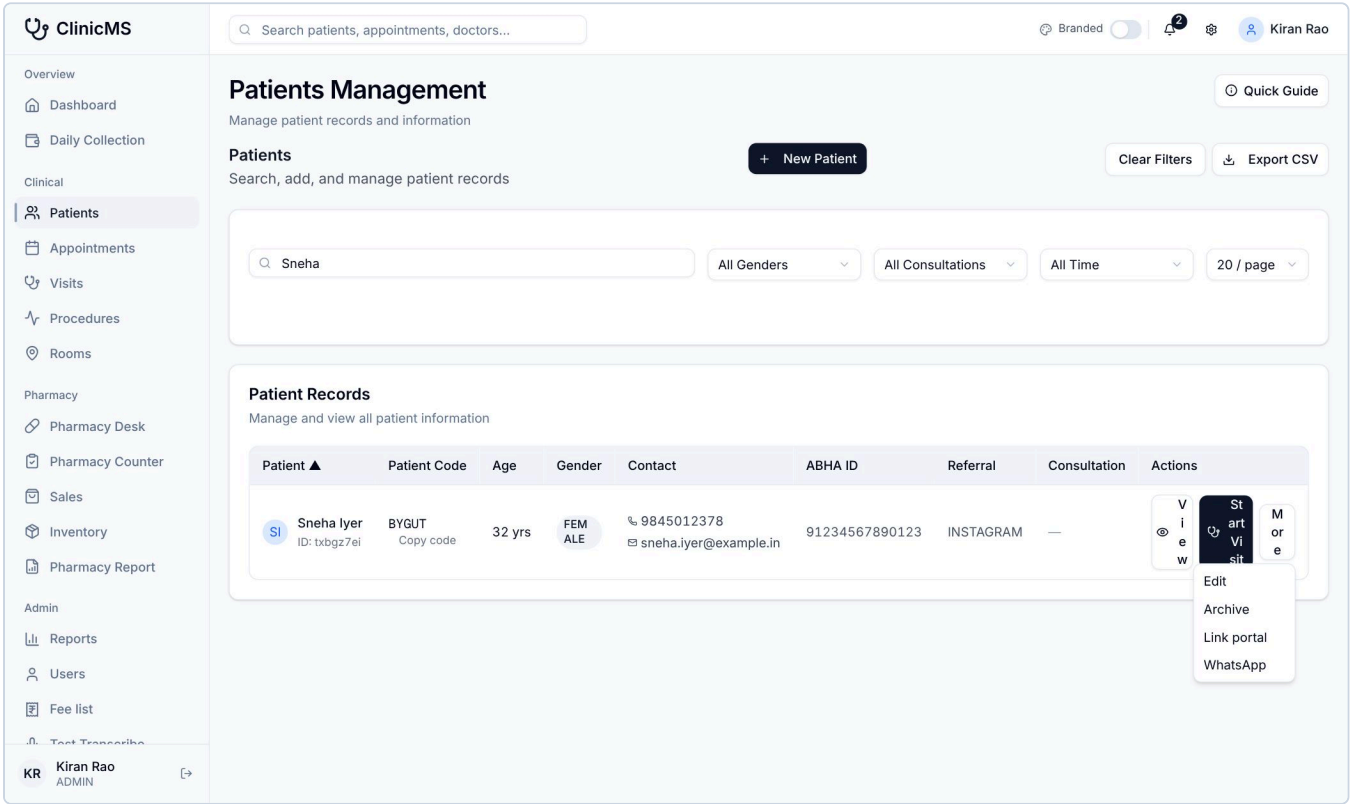

Figure 3.11. The More menu on a patient's row.

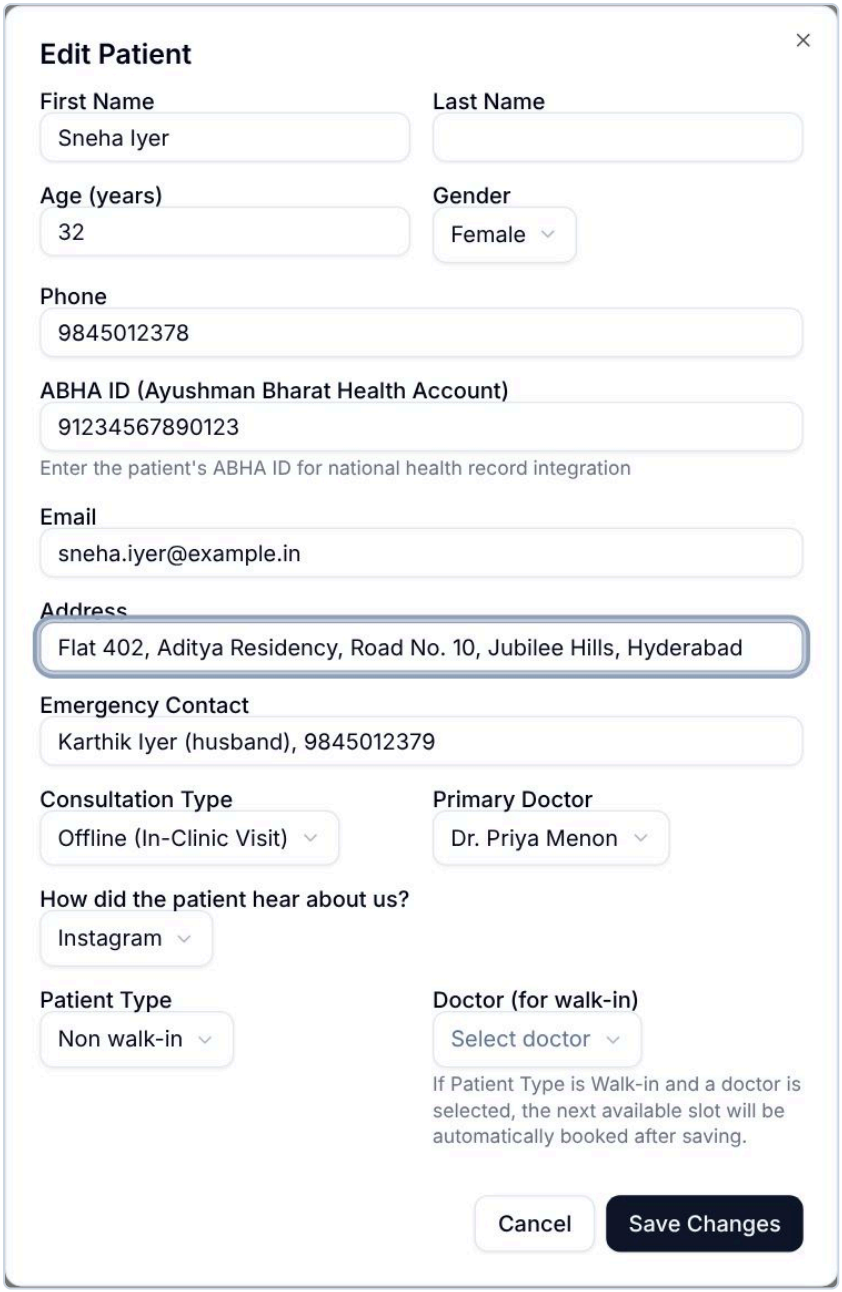

Figure 3.12. The Edit Patient window with a new address.

> **TIP**
> The Edit Patient window shows the patient's whole name in **First Name** and leaves **Last Name** empty. Leave it that way: the name is saved as it reads.

3.9 Archive a patient

WHO USES THIS Reception, admins

Archive a record that was created by mistake, for example a duplicate. An archived patient no longer appears in the list or in searches. Their visits, prescriptions and bills are kept.

1. Click **More** on the patient's row, then **Archive**.
2. The row disappears and a message says *Patient archived*.

3. If you archived the wrong patient, click **Undo** in the message straight away. The patient comes back.

Figure 3.13. The message after archiving, with its Undo button.

> **TAKE CARE**
> The Undo button only stays while the message is on screen. After that, ask your clinic admin to restore the patient.

3.10 Link a patient to the patient portal

WHO USES THIS Reception, admins

If the patient has an account on the clinic's patient portal, link it to their record so they can see their own information there. The portal account must already exist.

1. Click **More** on the patient's row, then **Link portal**.
2. Check the **Email**. It starts with the email on the patient's record. Change it to the email of their portal account if it is different.
3. Click **Link**. A message says *Portal user linked*, and a **Portal Linked** badge appears under the name.
4. To remove the link, click **More**, then **Unlink portal**, then **Confirm** in the message.

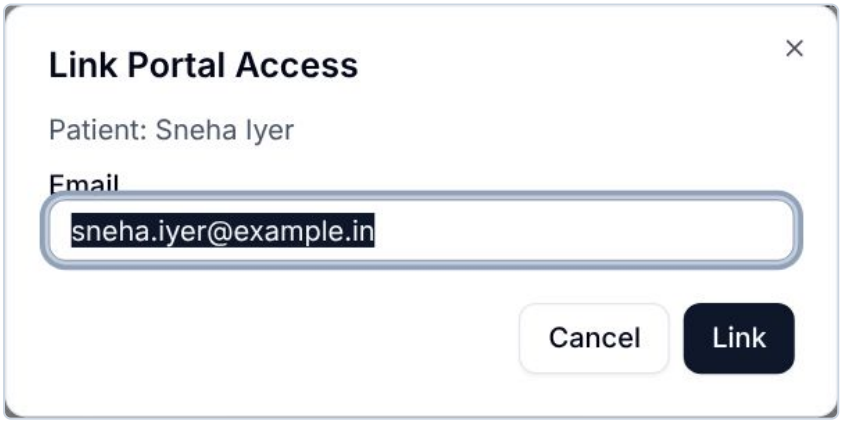

Figure 3.14. The Link Portal Access window.

3.11 Send a WhatsApp reminder

WHO USES THIS Reception

More then **WhatsApp** sends the patient a reminder of their next appointment on WhatsApp. A message says *Reminder sent*. If the patient has no upcoming appointment, or the clinic's WhatsApp account is not connected, a red message says the reminder failed.

3.12 Open a patient's page

WHO USES THIS Doctors, reception, nurses

Click a patient's row, or **View**, to open their page. The top of the page sums up the patient. Below it, a row of steps shows where their latest visit has got to, and three tabs hold the details.

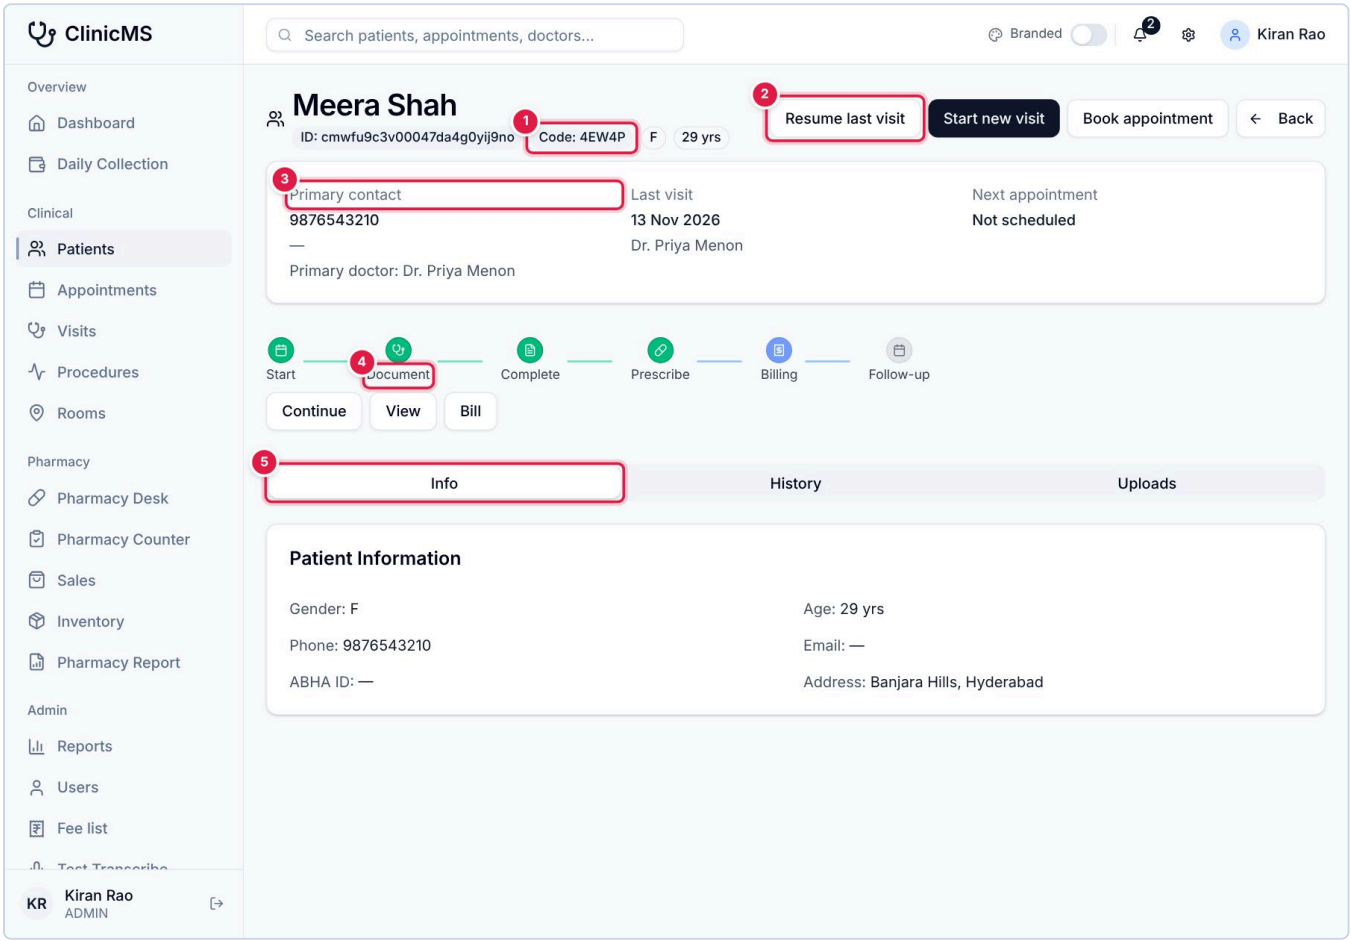

Figure 3.15. Meera Shah's page.

MARKER	WHAT IT SHOWS
1. Badges	The internal ID, the patient code, the ABHA number if there is one, gender and age.
2. Buttons	**Resume last visit** reopens the latest visit. **Start new visit** opens a new visit on the Visits page. **Book appointment** opens Appointments with this patient already chosen. **Back** returns to the list.
3. Summary	**Primary contact**: phone, email and primary doctor. **Last visit**: date and doctor. **Next appointment**: date and time, or *Not scheduled*, and how the patient was referred.
4. Progress steps	Where the latest visit has got to. See the next section.
5. Tabs	**Info**, **History** and **Uploads**.

3.13 Follow a patient's progress

WHO USES THIS Doctors, reception

The six circles under the summary follow the patient's latest visit from start to follow-up. Green means done, a pulsing blue circle means this is the next thing to do, and grey means not reached yet. The buttons under the circles take you straight to the next task.

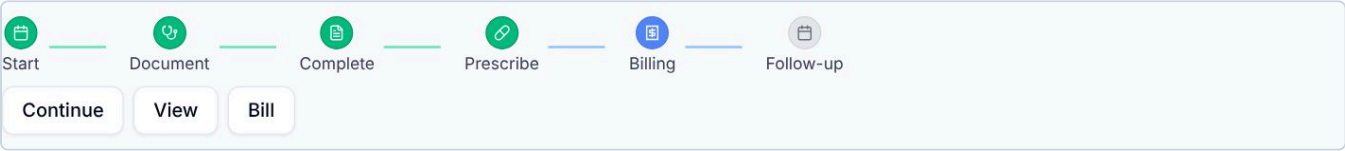

Figure 3.16. Meera Shah's progress: visit, documentation, prescription and bill are done.

STEP OR BUTTON	MEANING
Start	Done when the patient has a visit. Blue when they have an upcoming appointment but no visit yet.
Document	Blue while a visit from the last 24 hours has no prescription yet. Green once the visit is documented.
Complete	Green when the latest visit is finished.
Prescribe	Green when the latest visit has a prescription, blue when it still needs one.
Billing	Green when the patient has a recent bill, blue when a prescription is waiting to be billed.
Follow-up	Green when a follow-up has been set on the latest visit.
Continue, Start Visit or Book	**Continue** reopens the latest visit. **Start Visit** appears when an appointment is waiting. **Book** appears when the patient has no visit and no appointment.
View or Prescribe	Opens the latest visit's prescription, or the visit to write one.

Invoices or Bill	Opens the patient's bills, or a new bill for the latest visit.

3.14 Check a patient's details

WHO USES THIS Everyone who opens a patient

The **Info** tab lists the patient's gender, age, phone, email, ABHA ID and address. To change any of them, go back to the list and use **More**, then **Edit**.

Figure 3.17. The Info tab.

3.15 Read a patient's history

WHO USES THIS Doctors, nurses

The **History** tab lists every visit and appointment, newest first, grouped by date. Each card shows the visit date, the doctor, the visit status, the chief complaint, the diagnosis and the number of medicines prescribed.

1. Click the **History** tab.
2. To narrow the list, choose a doctor in the **All doctors** list, or set a from and to date. **Clear filters** shows everything again.
3. Click a date bar to hide or show the records for that day.
4. On a card, click **Show details** to read the history, medicines and photos from that visit. **Full details** and **Compact view** switch between the full record and a short one.
5. Click **Resume session** to open the visit on the Visits page.
6. Click **Refresh** to load any changes made since you opened the page.

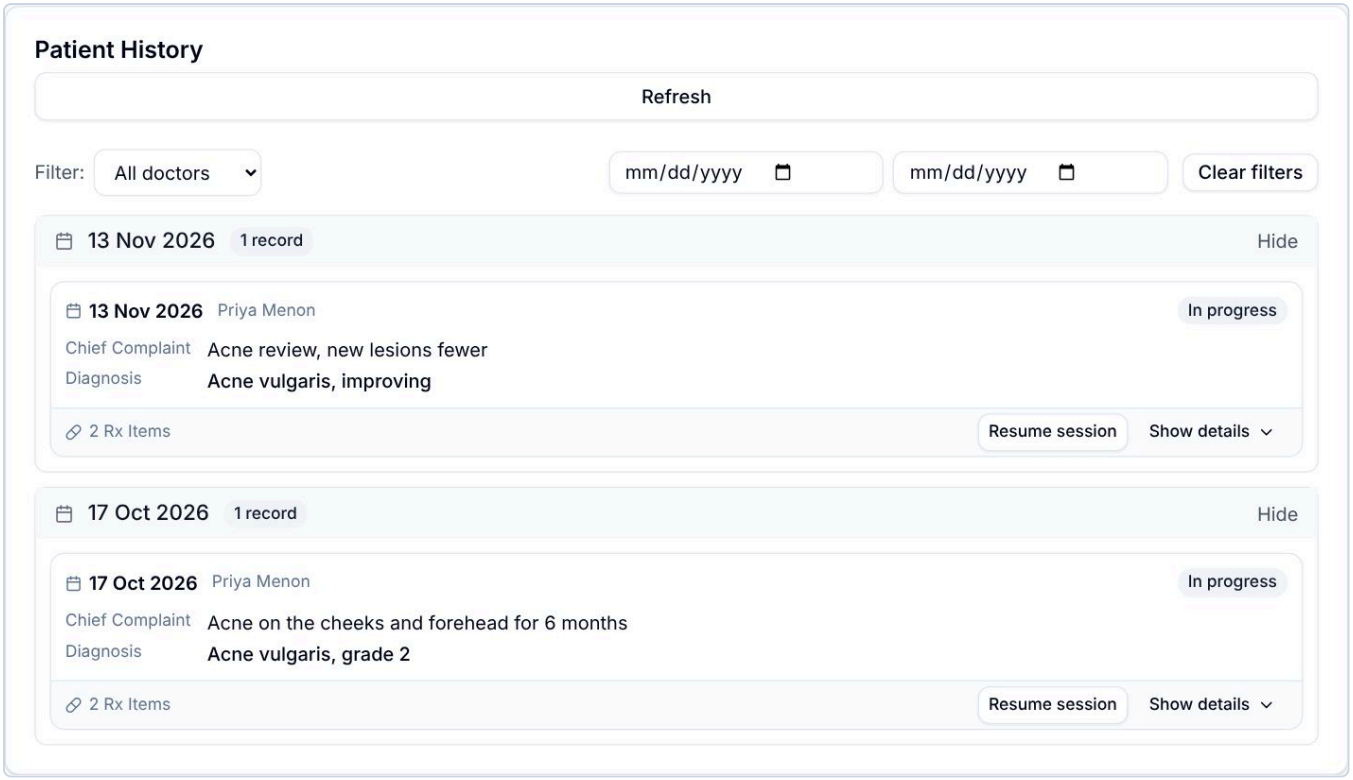

Figure 3.18. Meera Shah's History tab, with two visits.

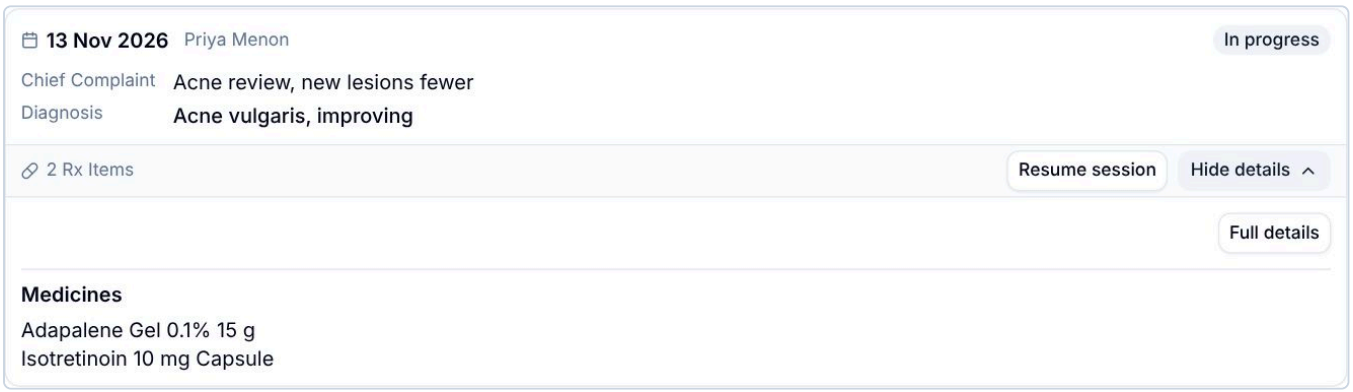

Figure 3.19. One visit opened with Show details.

3.16 Add before and after photos

WHO USES THIS Doctors, nurses

Photos let you compare a patient's skin or hair over time. The **Uploads** tab holds photos for the patient. Each photo is tagged with the position it shows, so the same view can be compared between visits.

1. Click the **Uploads** tab.
2. Click **Choose Files** (or **Upload**) and pick one or more pictures. On a phone or tablet, **Take Photo** (or **Camera**) opens the camera.

3. The **Tag photo positions** window opens. For each picture, choose the position: Front, Left, Right, Back, Close-up or Other. **Infer positions** fills them in the usual order. **Grid** shows all pictures at once and **Single** shows one at a time.
4. Click **Upload**. The photos appear in the viewer.
5. Use **Prev** and **Next** to move between photos, or click a thumbnail. When there are photos from more than one visit, **Compare: Off** switches to a side-by-side view of the same position from two visits.

Figure 3.20. Tagging two photos before they are uploaded.

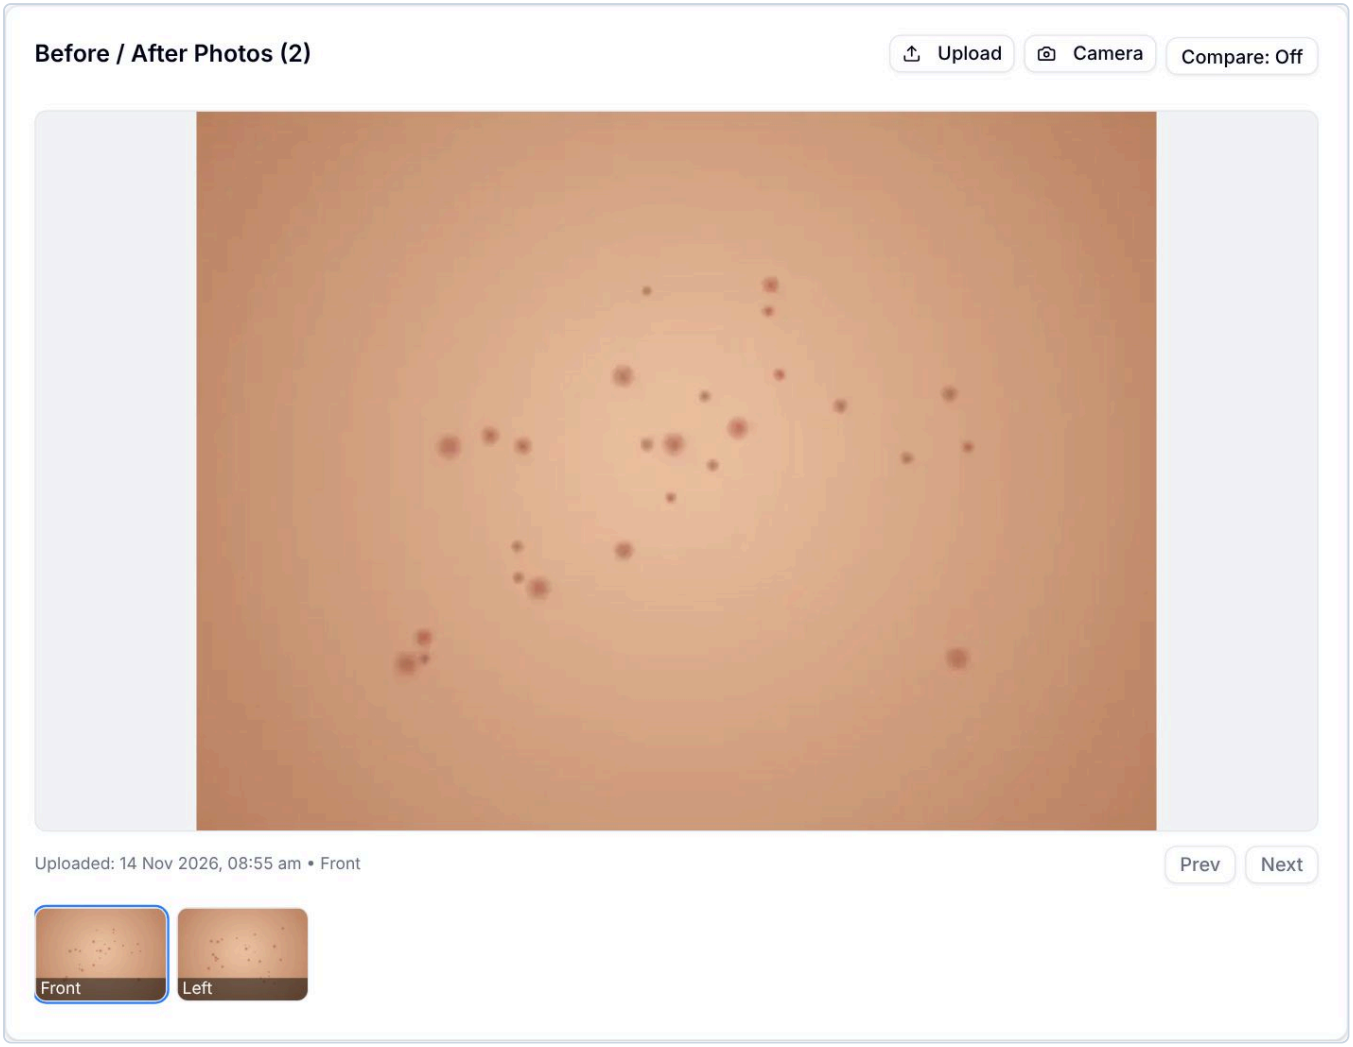

Figure 3.21. The Uploads tab after the upload.

3.17 Quick Guide

WHO USES THIS Everyone who uses Patients

The **Quick Guide** button at the top right of the Patients page opens a short summary of the page. Where it differs from the screen, follow the screen: the button is called **New Patient**, only the first name and phone are required, and age is typed in years rather than a date of birth.

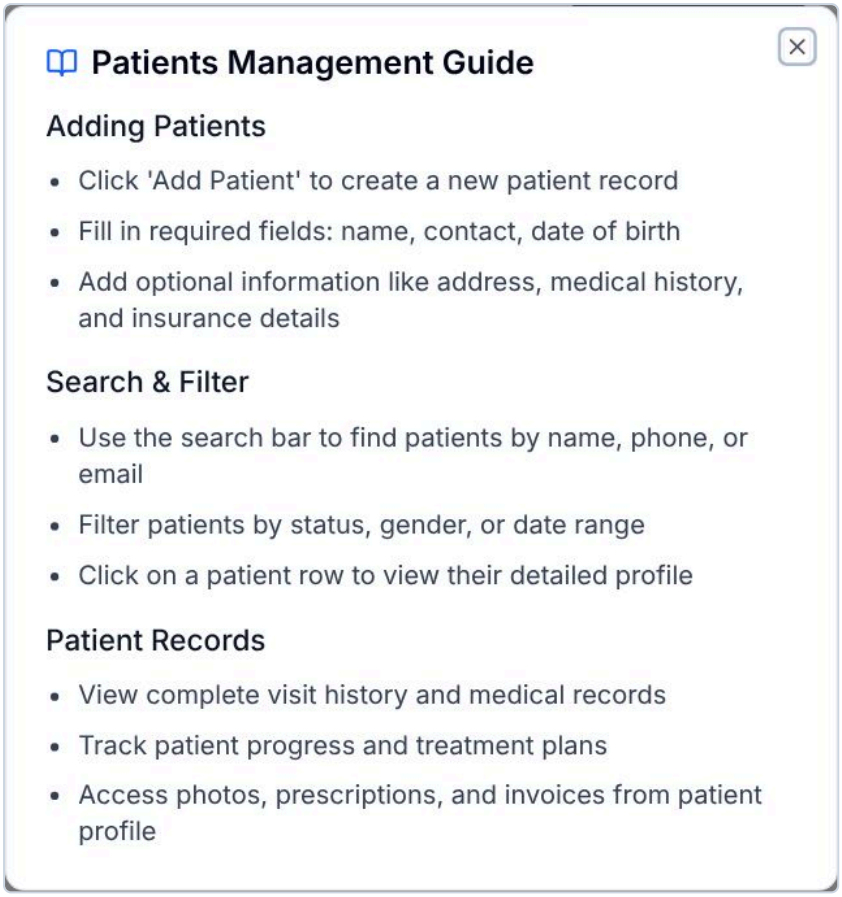

Figure 3.22. The Patients Management Guide.

CHAPTER 4

Appointments

The Appointments page is each doctor's diary for the day. Reception books patients into it, calls them to confirm, and moves or cancels bookings. Doctors use it to see who is next and to start the visit. The front desk can also bill a consultation straight from the diary.

4.1 Open a doctor's day

WHO USES THIS Reception, doctors, nurses, admins

Open **Appointments** from the menu. Choose the doctor and the date at the top. The page opens on today, and remembers the doctor you chose last time on this computer.

The **Calendar** tab is the day view used for booking. The **Slots** tab shows the same day with a few different controls (see *Use the Slots tab* below).

1. Choose the doctor in **Doctor**.
2. Choose the day in **Date**.
3. Read the day in the two columns under the legend.

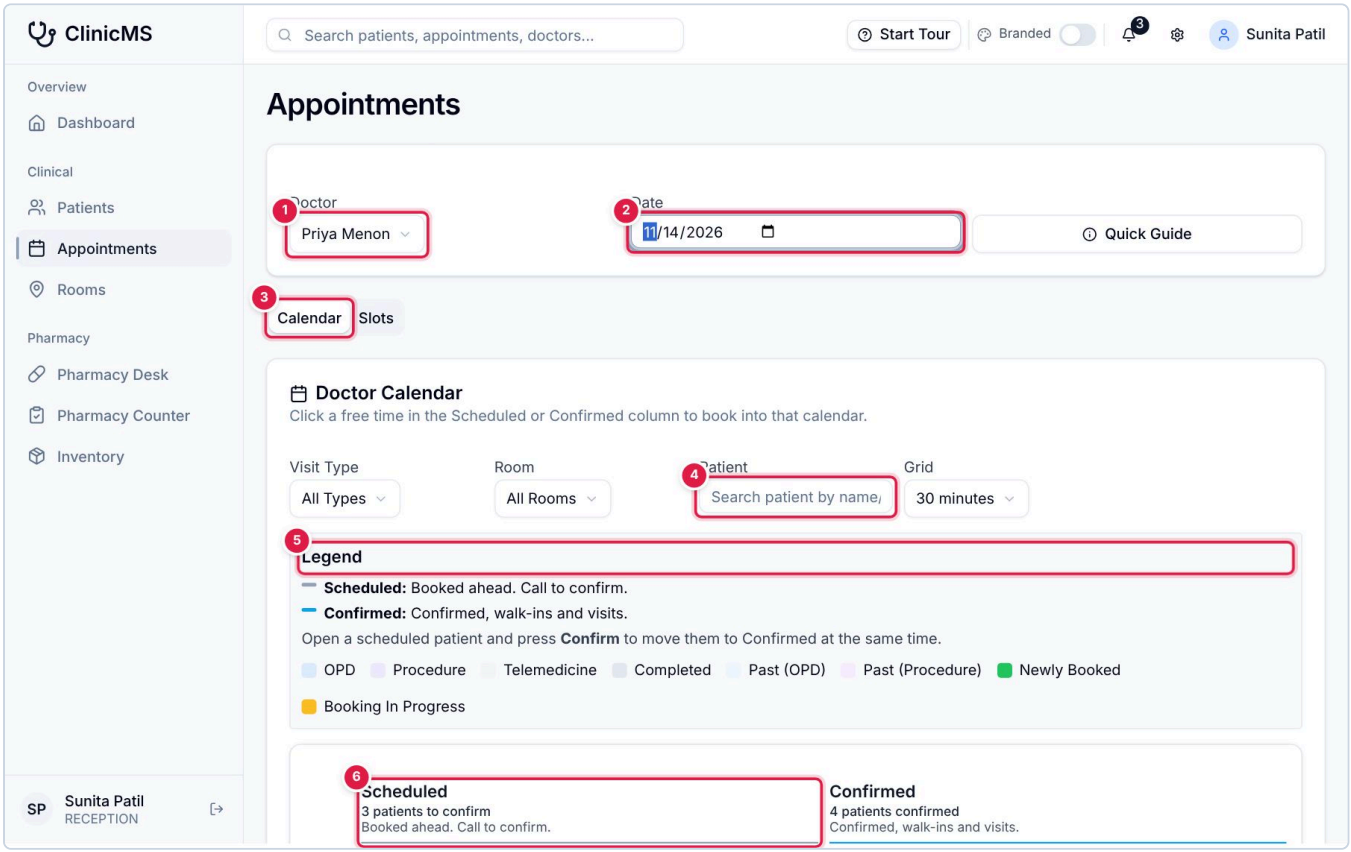

Figure 4.1. The Appointments page for Dr. Priya Menon, today.

MARKER	WHAT IT IS
1. Doctor	Whose diary you see.
2. Date	The day you see. Bookings, moves and bills all apply to this day.
3. Calendar and Slots	Two views of the same day.
4. Filters and patient search	Visit Type, Room, Patient and Grid. The patient you choose here is the one you book.
5. Legend	What the colours mean.
6. Scheduled and Confirmed	The two columns of the day, side by side on one time scale.

4.2 Understand the Scheduled and Confirmed columns

WHO USES THIS Reception, doctors

Each doctor's day has two calendars. **Scheduled** (left, grey line) holds patients booked ahead who have not yet confirmed. Reception calls them the day before. **Confirmed** (right, blue line) is the doctor's real day: confirmed patients, walk-ins and patients who are being seen or have been seen.

Under each column title, a line counts its patients, for example *3 patients to confirm* or *2 patients confirmed*. The time runs down the left. A red line across both columns marks the current time on today's page. Times that have passed are greyed and cannot be booked.

Each column has its own places. A patient in Scheduled at 11:00 does not stop you booking another patient into Confirmed at 11:00.

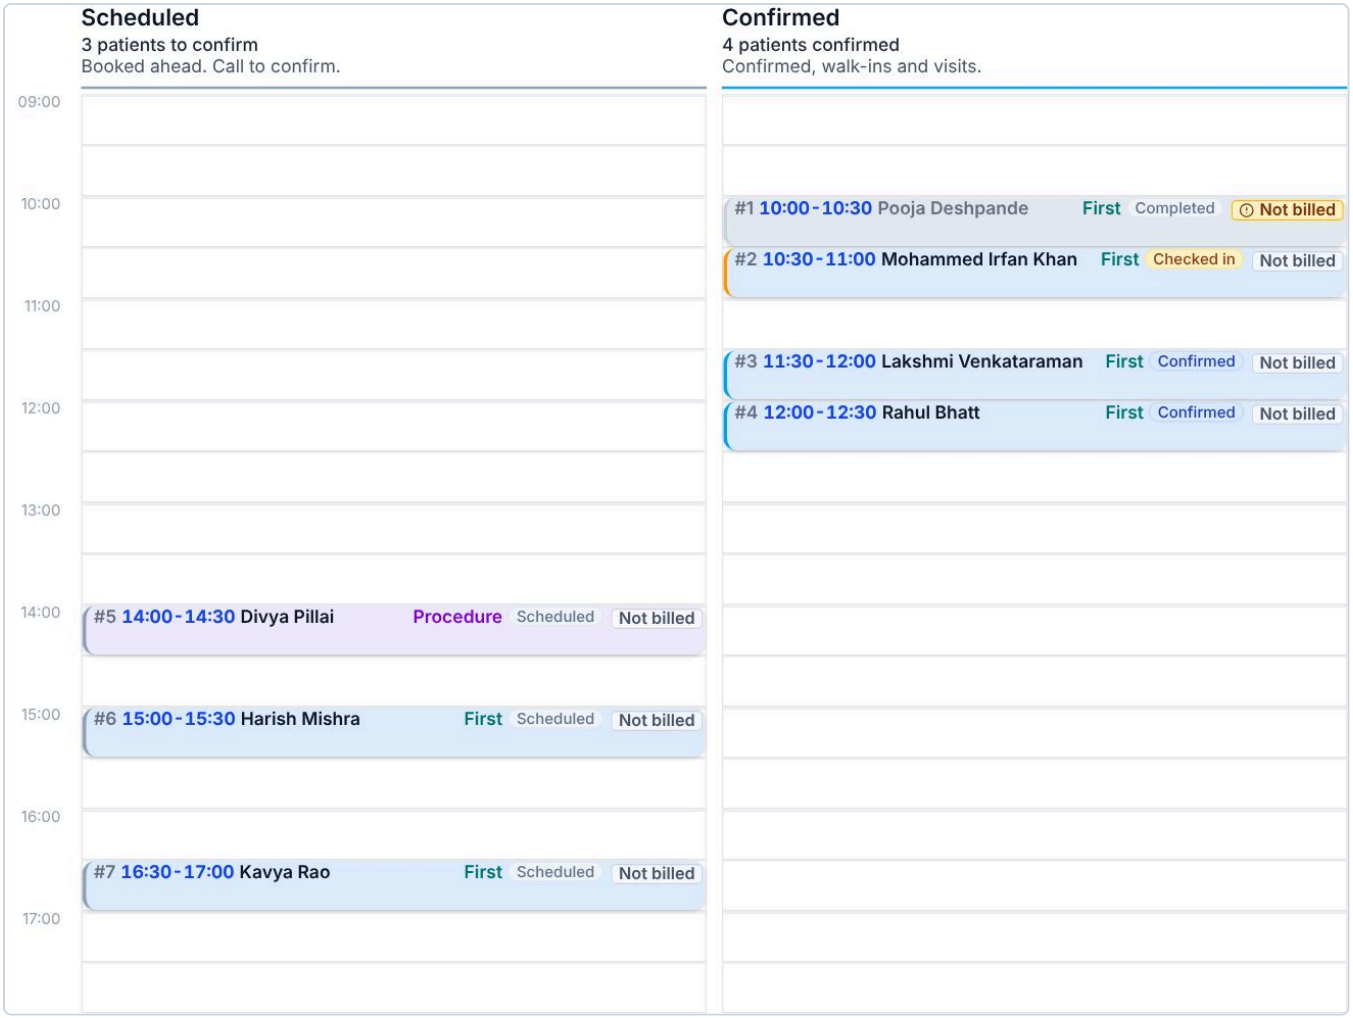

Figure 4.2. Today's two columns for Dr. Priya Menon.

4.3 Read an appointment block

WHO USES THIS Reception, doctors

Each booking is a coloured block that starts at its start time and is as tall as it is long. From left to right, a block shows:

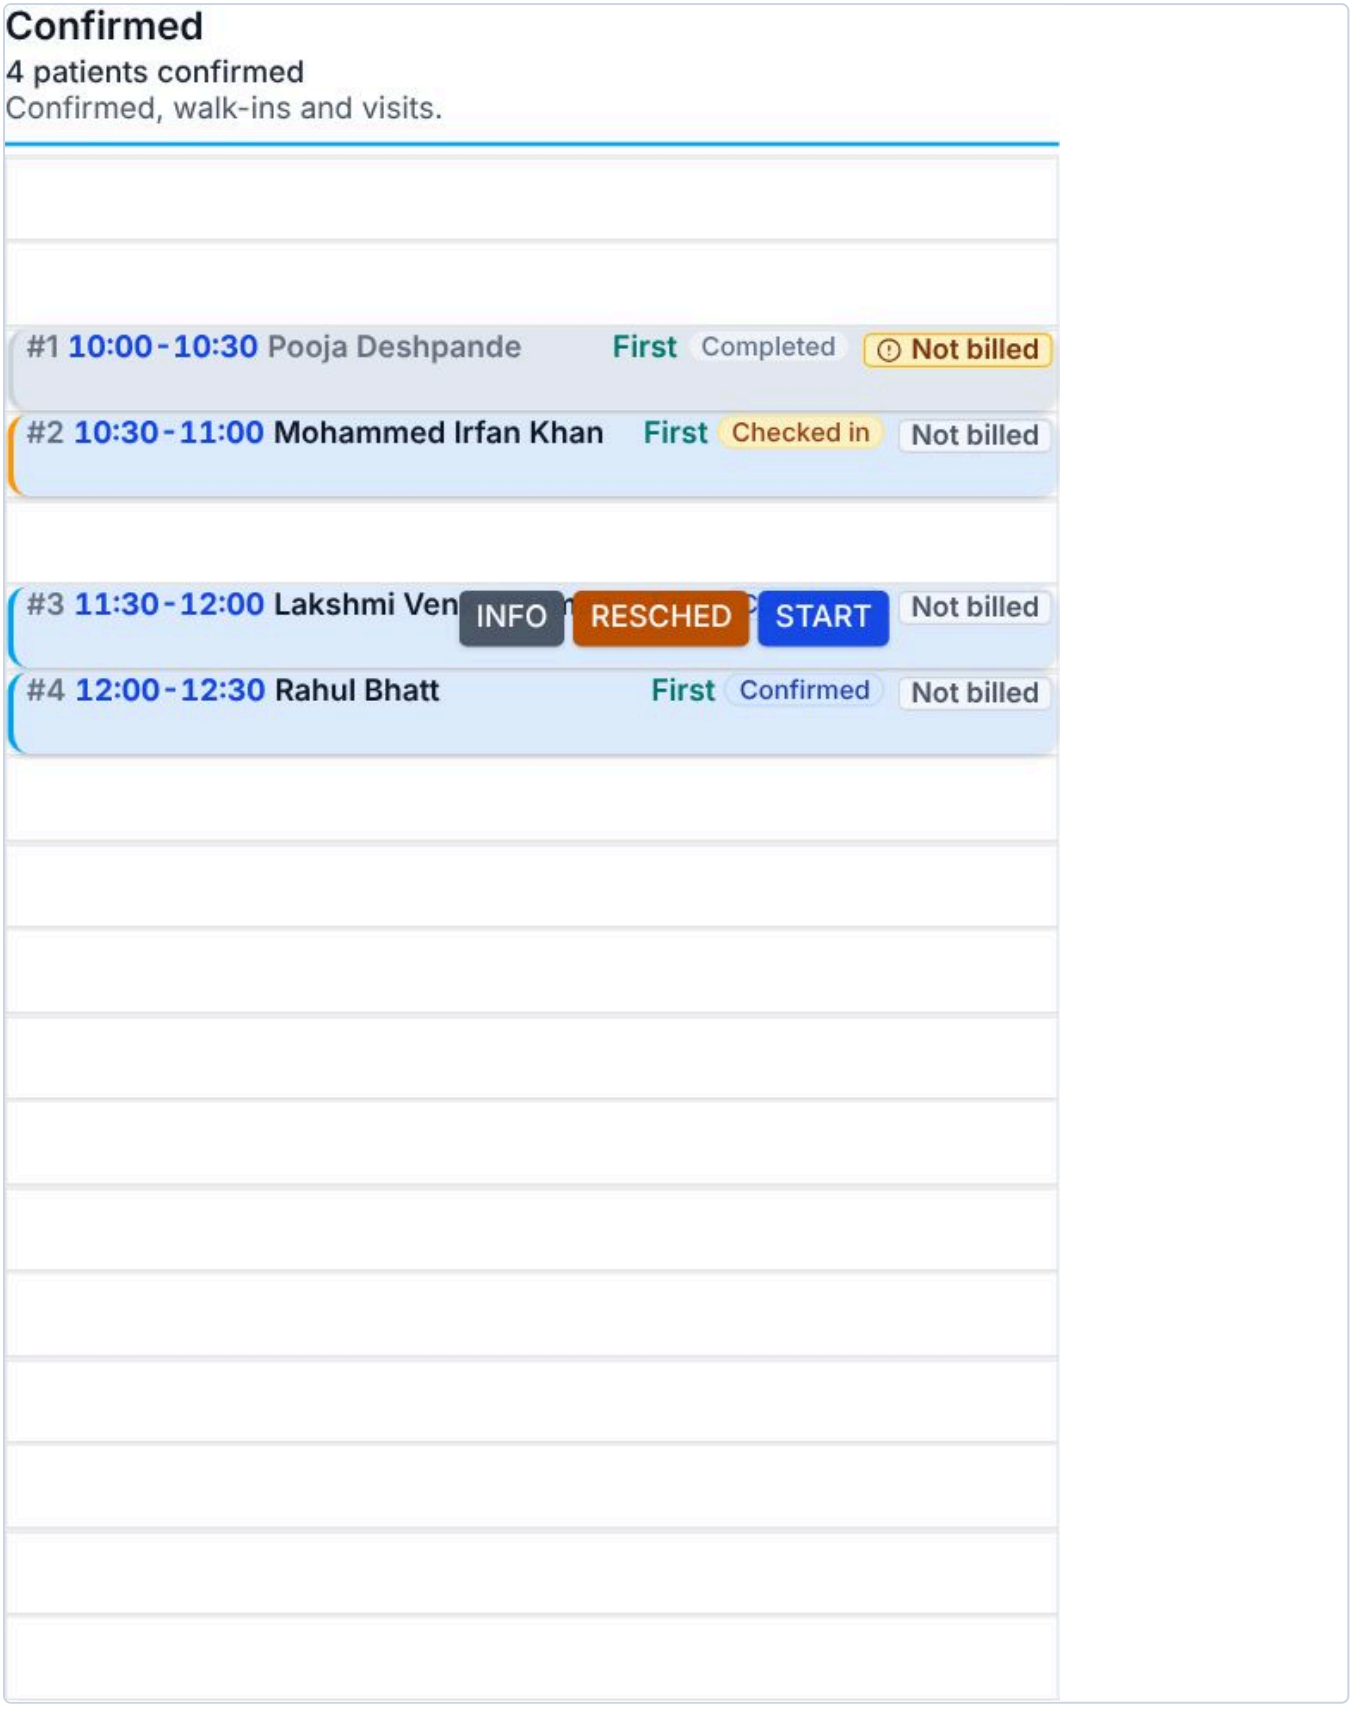

Figure 4.3. Holding the mouse over a block shows INFO, RESCHED and START.

ON THE BLOCK	MEANING
#3	The token number: the order in which the patient was booked for the day. Call patients by it at the desk.
10:30-11:00	The time, when the block is wide enough.
Name	The patient. A line through the name means a no-show or cancelled appointment.
First, Review or Procedure	The bill type. **First** (first consultation) for a patient's first visit, **Review** for a returning patient, **Procedure** for procedures. It decides which fee the bill uses.
Status	A coloured dot, or the status in words on a wide screen. See the next section.
Procedure name, type, age, sex, room	Shown when there is room on the block, for example *(Chemical peel)*, 52y, F, Laser Suite.
Bill chip	At the right edge: **Not billed**, an amount **due**, or an amount and **Paid**. See *Bill a consultation from the calendar*.
INFO, RESCHED, START	Appear when you hold the mouse over the block. **INFO** opens the details. **RESCHED** starts moving the booking (only for Scheduled and Confirmed bookings). **START** opens the visit; it reads **CONT** when a visit is already open.

> **TIP**
> The details also appear as a small tip when you rest the mouse on a block: token, name, time and status.

4.4 Know the statuses and colours

WHO USES THIS Reception, doctors

The thin bar on the left edge of a block, and the status dot, show where the appointment is in the day. The block's fill shows the visit type.

Figure 4.4. The legend above the calendar.

STATUS OR COLOUR	MEANING
Scheduled (grey)	Booked ahead, not yet confirmed. Shown in the Scheduled column.
Confirmed (blue)	The patient has confirmed, or was booked straight into Confirmed.
Checked in (amber)	The patient is at the clinic and waiting. The Appointments page has no button to set this status.
In progress (green)	The doctor has started the visit from this appointment.
Completed (light grey, faded)	The visit is finished. The block turns light grey.
No-show (red, name crossed out)	The patient did not come. The Appointments page has no button to set this status; it appears on reports.
Cancelled	Cancelled appointments are removed from the calendar.
OPD fill (light blue)	A consultation.
Procedure fill (light purple)	A procedure.
Telemedicine fill (light grey)	A video consultation.
Past (OPD), Past (Procedure)	A paler fill once the time has passed.
Newly Booked (green ring)	The booking you just made, for a few seconds.
Booking In Progress (amber)	The time you are booking while the booking is being saved.

4.5 Filter the day

WHO USES THIS Reception, doctors

Filters hide blocks you do not need. They do not change any booking. A blue **Filters Active** bar reminds you that some blocks are hidden.

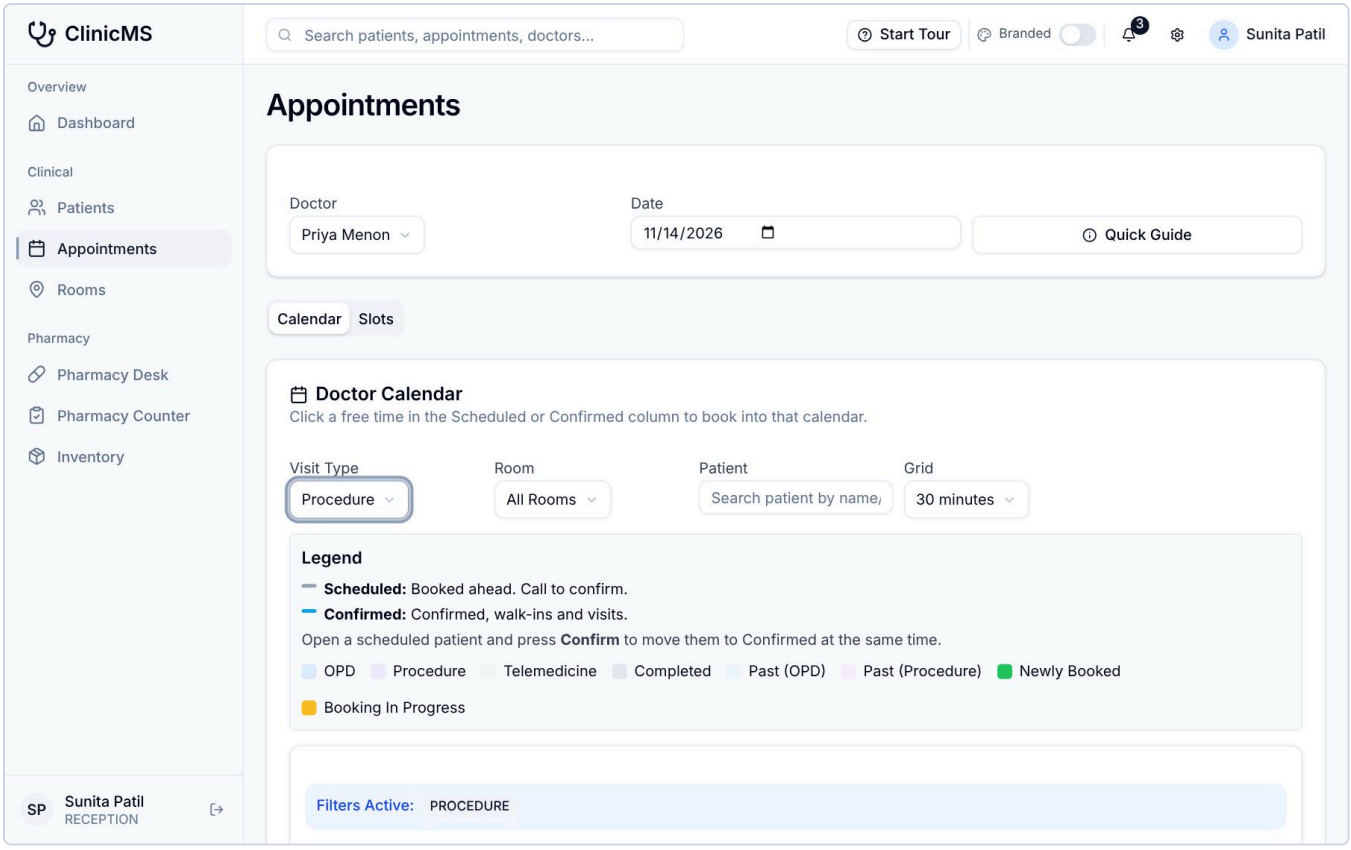

Figure 4.5. Only procedures, with the Filters Active bar.

FILTER	WHAT IT DOES
Visit Type	All Types, OPD Consultation, Procedure or Telemedicine.
Room	Shows only appointments in one room.
Patient	Search for the patient you want to book. See the next section.
Grid	How far apart the time lines are: 10, 15, 20, 30, 45 or 60 minutes. With a larger grid, clicking a line still finds the first free 15 minutes inside it.

4.6 Book an appointment for a registered patient

WHO USES THIS Reception

Book into **Scheduled** when the patient books ahead and you will call to confirm. Book into **Confirmed** for a walk-in or a patient who has already confirmed. You cannot book a time that has already passed.

1. Choose the doctor and the date.
2. Type the patient's name or phone number in **Patient**.
3. Click the patient in the list under the box. A **Selected** badge shows their name and phone.
4. Click a free time in the **Scheduled** or **Confirmed** column. The **Book Appointment** window opens.

5. Check the patient, date and time. Change the **Duration** if the visit needs longer than the time you clicked.
6. Choose the **Appointment Type**: OPD Consultation, Procedure or Telemedicine.
7. Optionally click a room card to put the patient in that room. Cards say **Available** or **Occupied** at that time.
8. Click **Confirm Booking**. A green message says *Appointment Successfully Booked!* and the new block appears with a green ring.

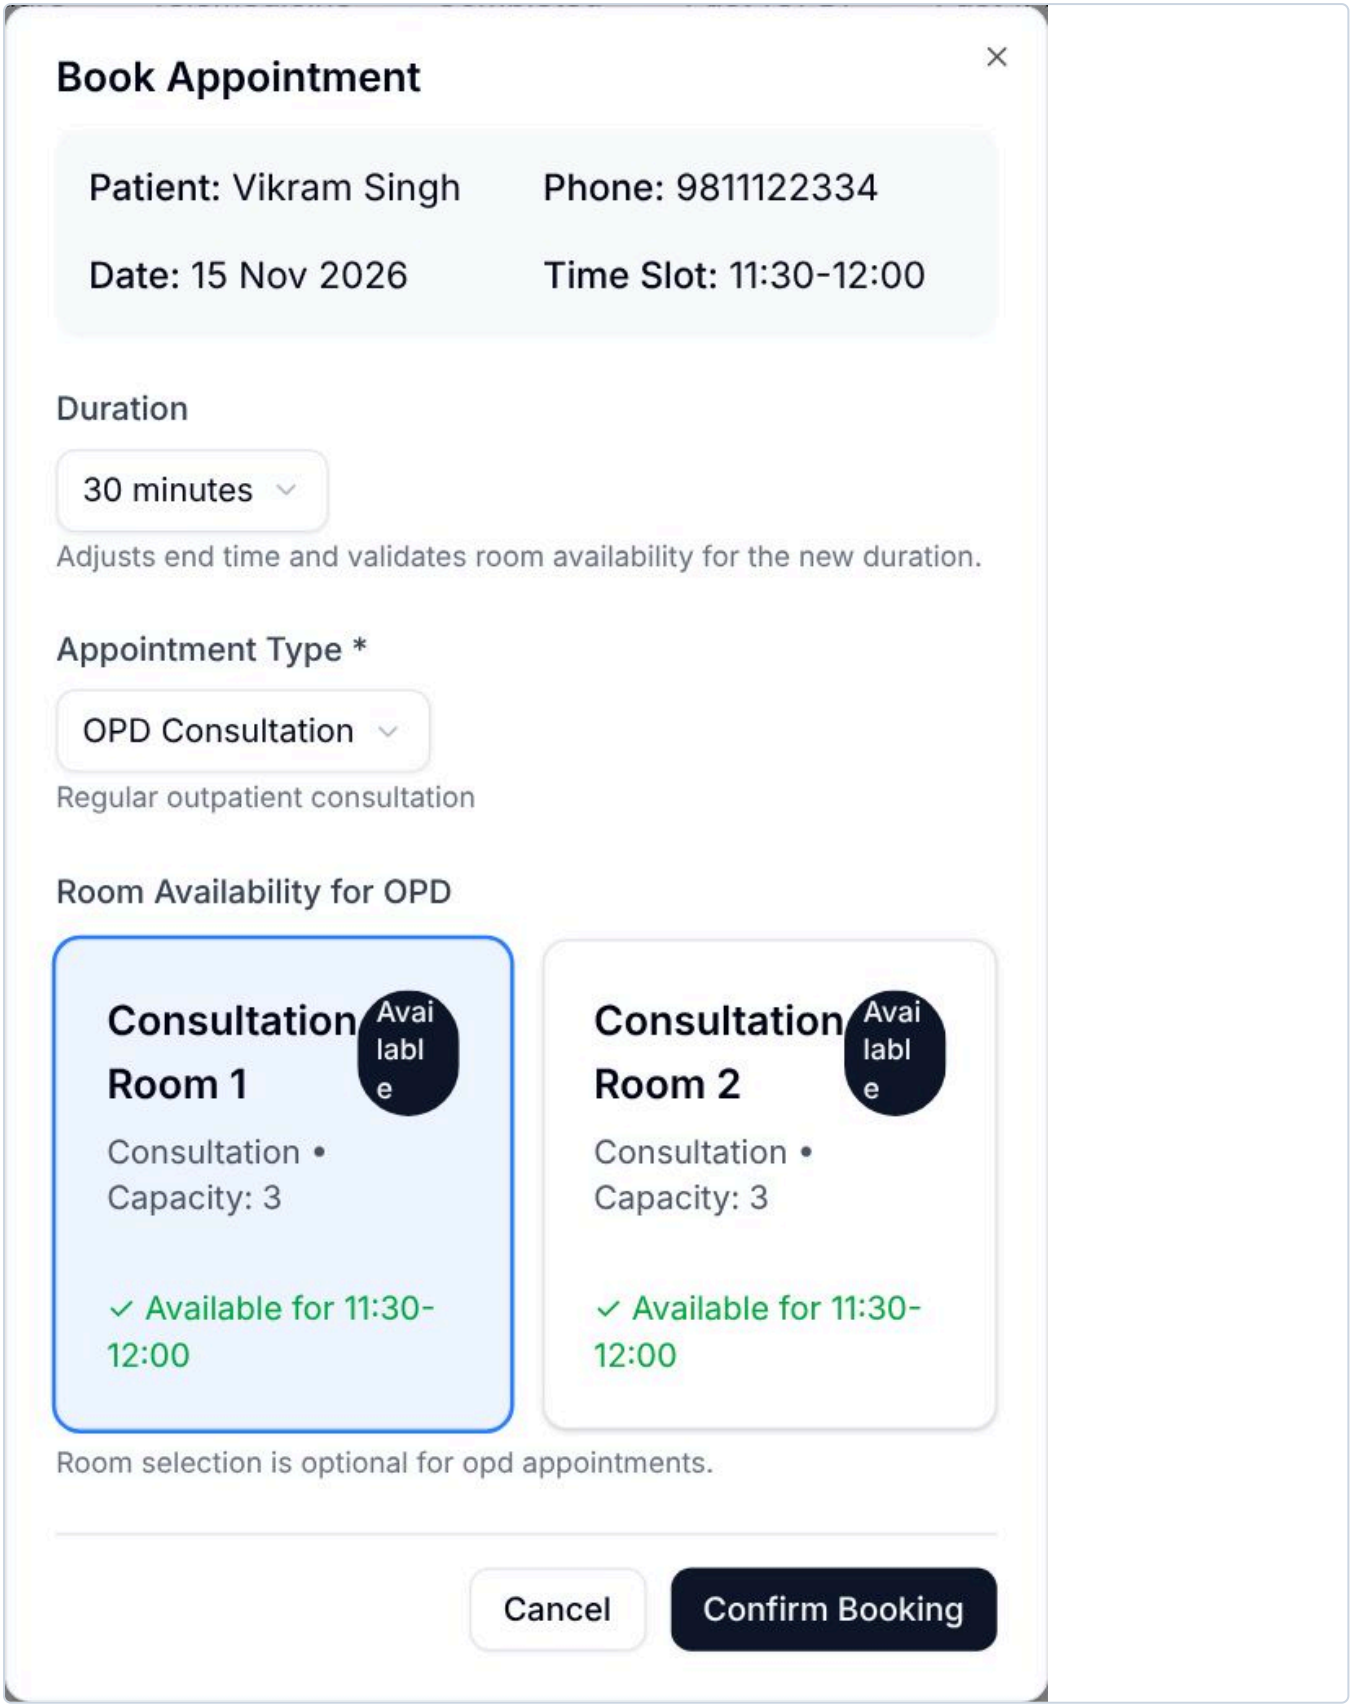

Figure 4.6. Booking Vikram Singh into the Scheduled column for tomorrow at 11:30.

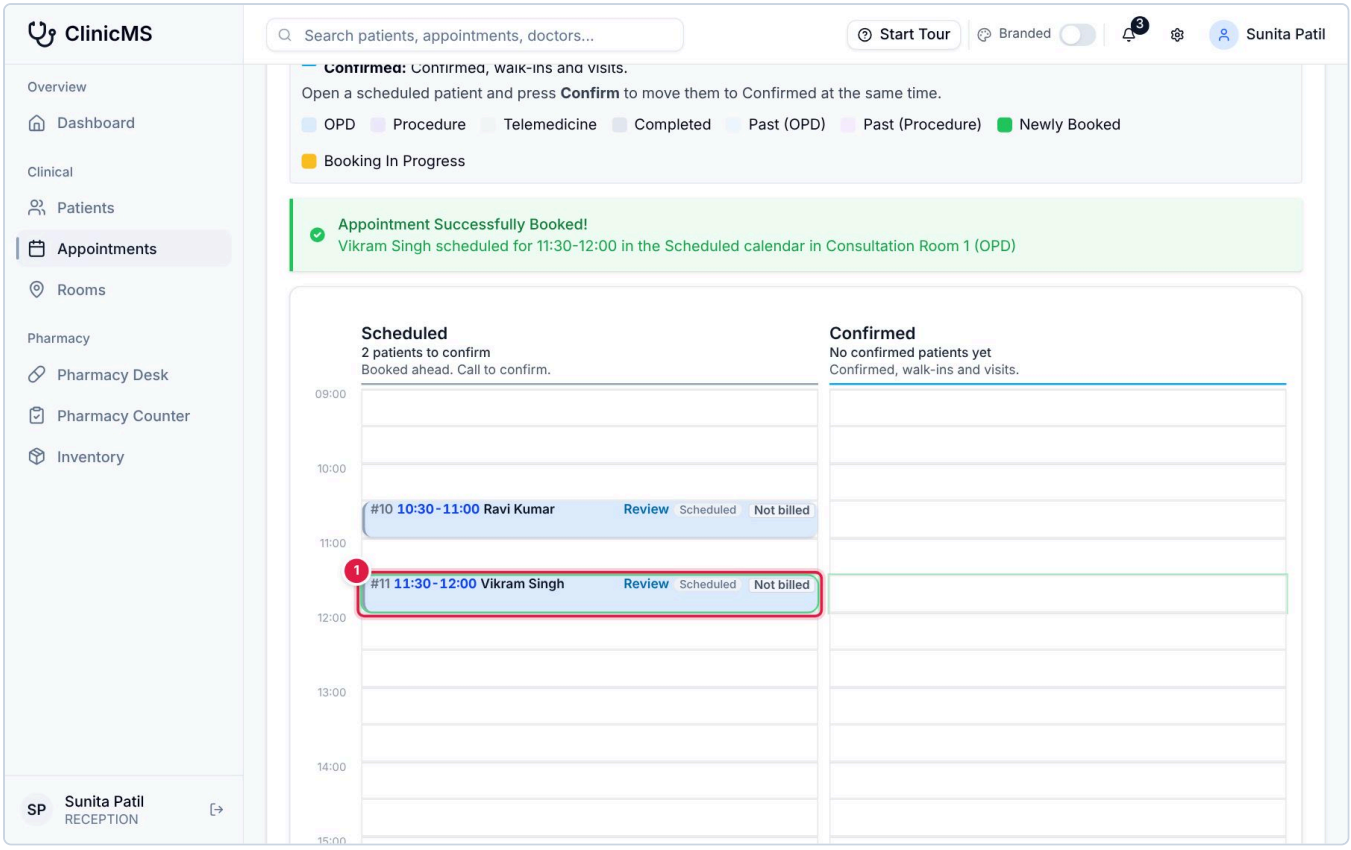

Figure 4.7. The booking message, and Vikram Singh's new block at 11:30.

IN THE WINDOW	WHAT TO DO
Duration	15, 20, 30, 45, 60 or 90 minutes. The end time and the room check change to match.
Appointment Type	**OPD Consultation**: a normal visit. **Procedure**: needs a procedure room and lets you type the procedure name. **Telemedicine**: a video consultation.
Room Availability	Rooms that suit the appointment type. An **Occupied** card names the patient and doctor already in it. A room is optional except for procedures.

> **TIP**
> If the time is outside the doctor's working hours, an amber warning appears. You can still book.
>
> If the doctor is on leave or the time is blocked, a red bar says *Not bookable* and the time cannot be booked.
>
> Drag down across several free times to book a longer appointment in one go.

4.7 Book a patient who is not registered yet

WHO USES THIS Reception

When a caller is new to the clinic, register them from the Appointments page without leaving it.

1. Type the patient's full name in **Patient**.

2. When there is no match, the **Add New Patient** window opens with the name filled in. (You can also click **+ Add … as a new patient**.)
3. Fill in **Gender** and **Phone**, which are required, and the age. Email, ABHA ID and consultation type are optional.
4. Click **Create Patient**. The new patient is selected for booking.
5. Click a free time and book as usual.

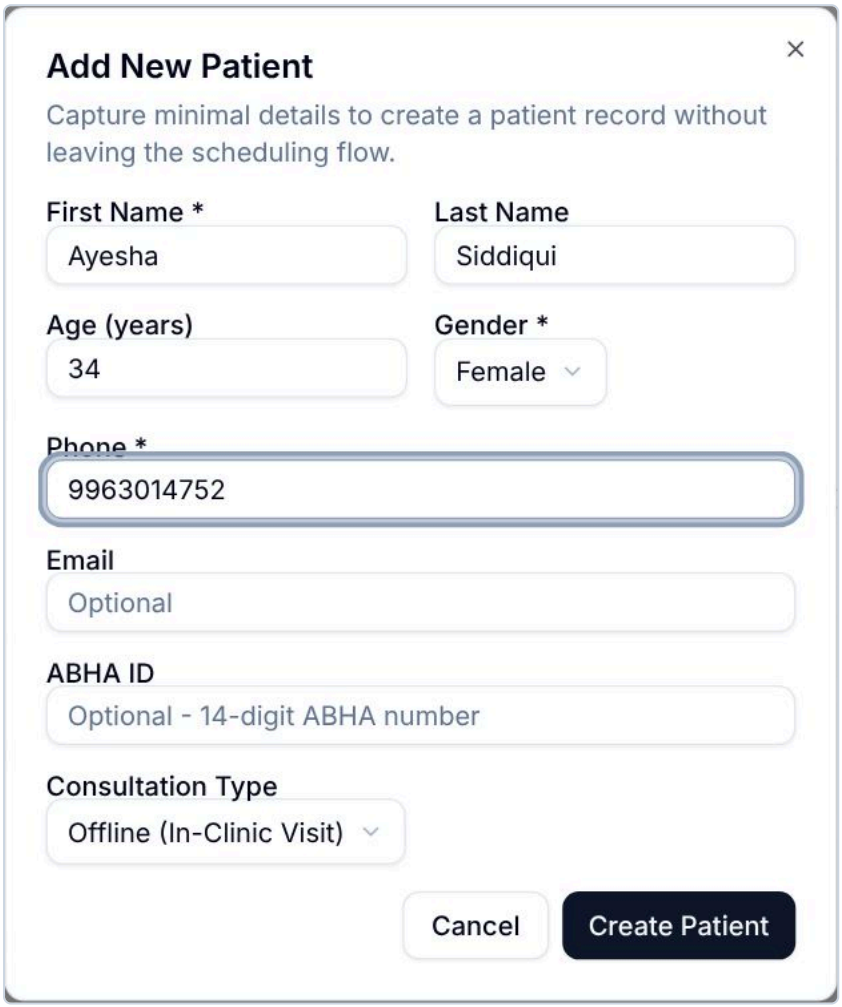

Figure 4.8. The Add New Patient window, opened from the patient search.

4.8 Book a procedure

WHO USES THIS Reception

A procedure needs a procedure room, so that two patients are not booked into the Laser Suite at once. The procedure name you type is shown on the calendar beside the patient's name.

1. Select the patient and click a free time.
2. Set **Appointment Type** to **Procedure**.
3. Type the **Procedure Name**, for example *Chemical peel*.
4. Set the **Duration**.

5. Click an **Available** procedure room. It turns blue. **Confirm Booking** stays greyed until you pick a room.
6. Click **Confirm Booking**.

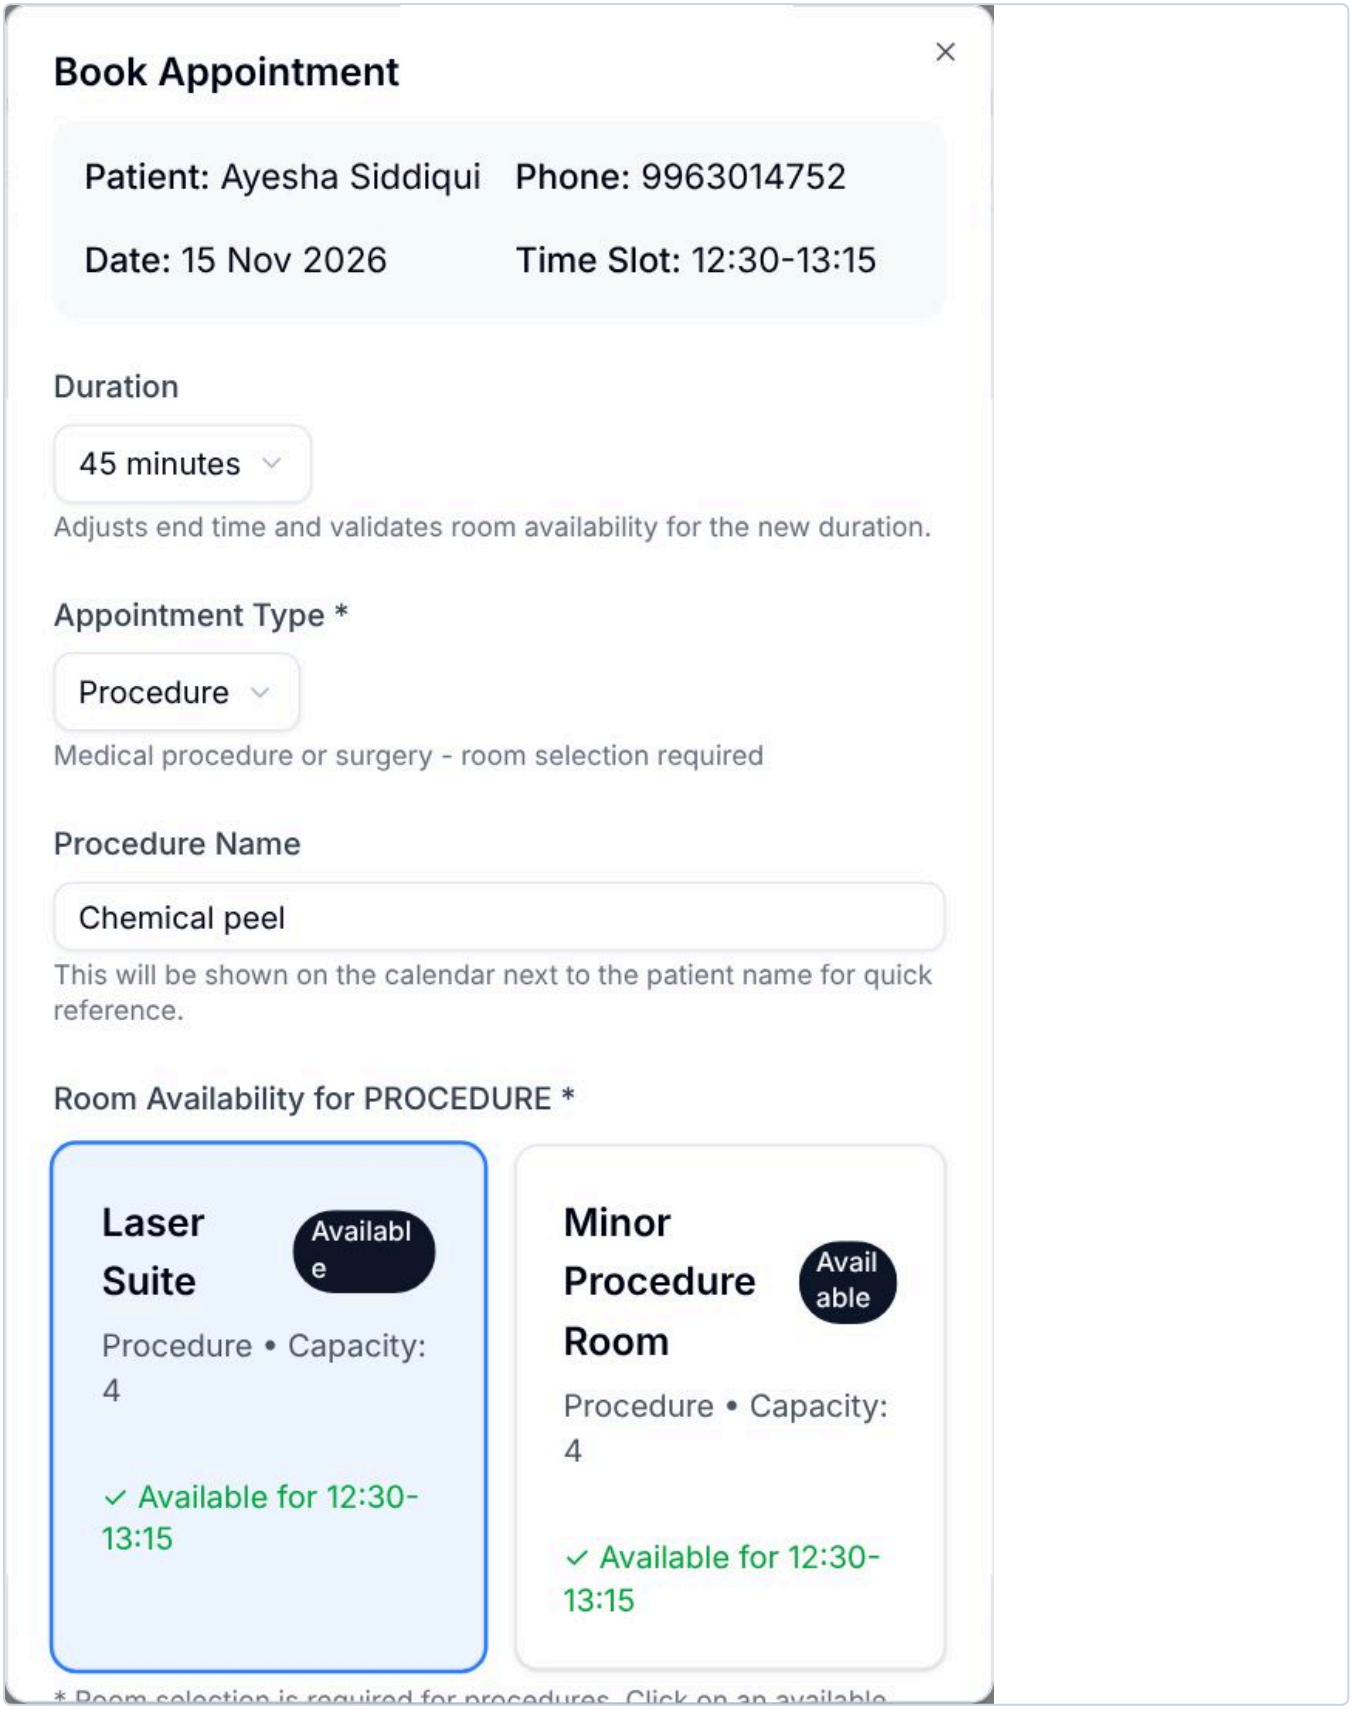

Figure 4.9. Booking a 45-minute chemical peel in the Laser Suite.

4.9 See an appointment's details

WHO USES THIS Reception, doctors

Click a block, or **INFO** on it, to open **Appointment Details**. The buttons at the bottom are where you confirm, move, cancel or start the appointment.

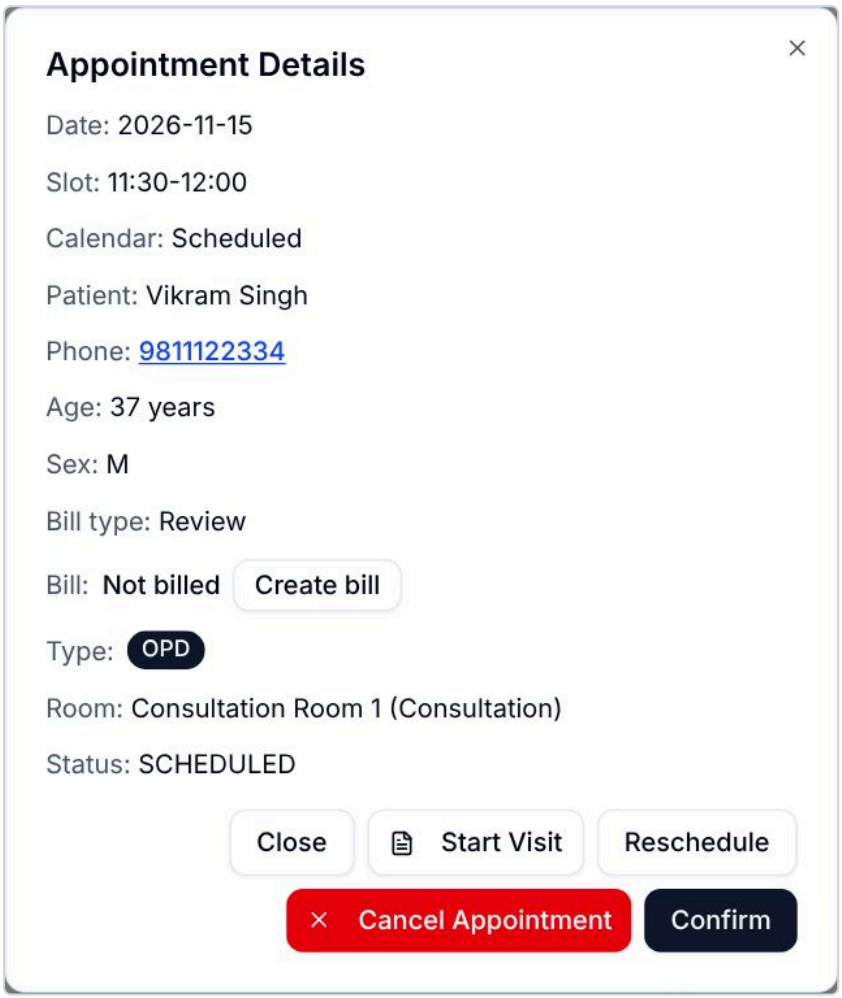

Figure 4.10. Appointment Details for a Scheduled appointment.

IN THE WINDOW	MEANING
Date, Slot, Calendar	When the appointment is and which column it is in.
Patient, Phone, Email, Age, Sex	Who it is. Click the phone number to call from a phone.
Bill type and Bill	The bill type and the bill's state, with **Create bill**, **Open bill** or **View bill**.
Type, Procedure, Room, Status	OPD, PROCEDURE or TELEMED, the procedure name, the room and the status.
Close	Closes the window.
Start Visit	Opens the Visits page for this patient and appointment.

Reschedule	Starts moving the appointment. Only for Scheduled and Confirmed appointments.
Cancel Appointment	Cancels it, after a check.
Confirm or Move to Scheduled	**Confirm** moves a Scheduled appointment to Confirmed at the same time. **Move to Scheduled** does the opposite for a Confirmed one.

4.10 Confirm an appointment after the call

WHO USES THIS Reception

Call each patient in the Scheduled column the day before. When they confirm, move them to Confirmed so the doctor's real day is up to date.

1. Click the patient's block in **Scheduled**.
2. Click **Confirm**.
3. A message says *Appointment confirmed*. The block moves to the **Confirmed** column at the same time.
4. To undo, open the block in Confirmed and click **Move to Scheduled**.

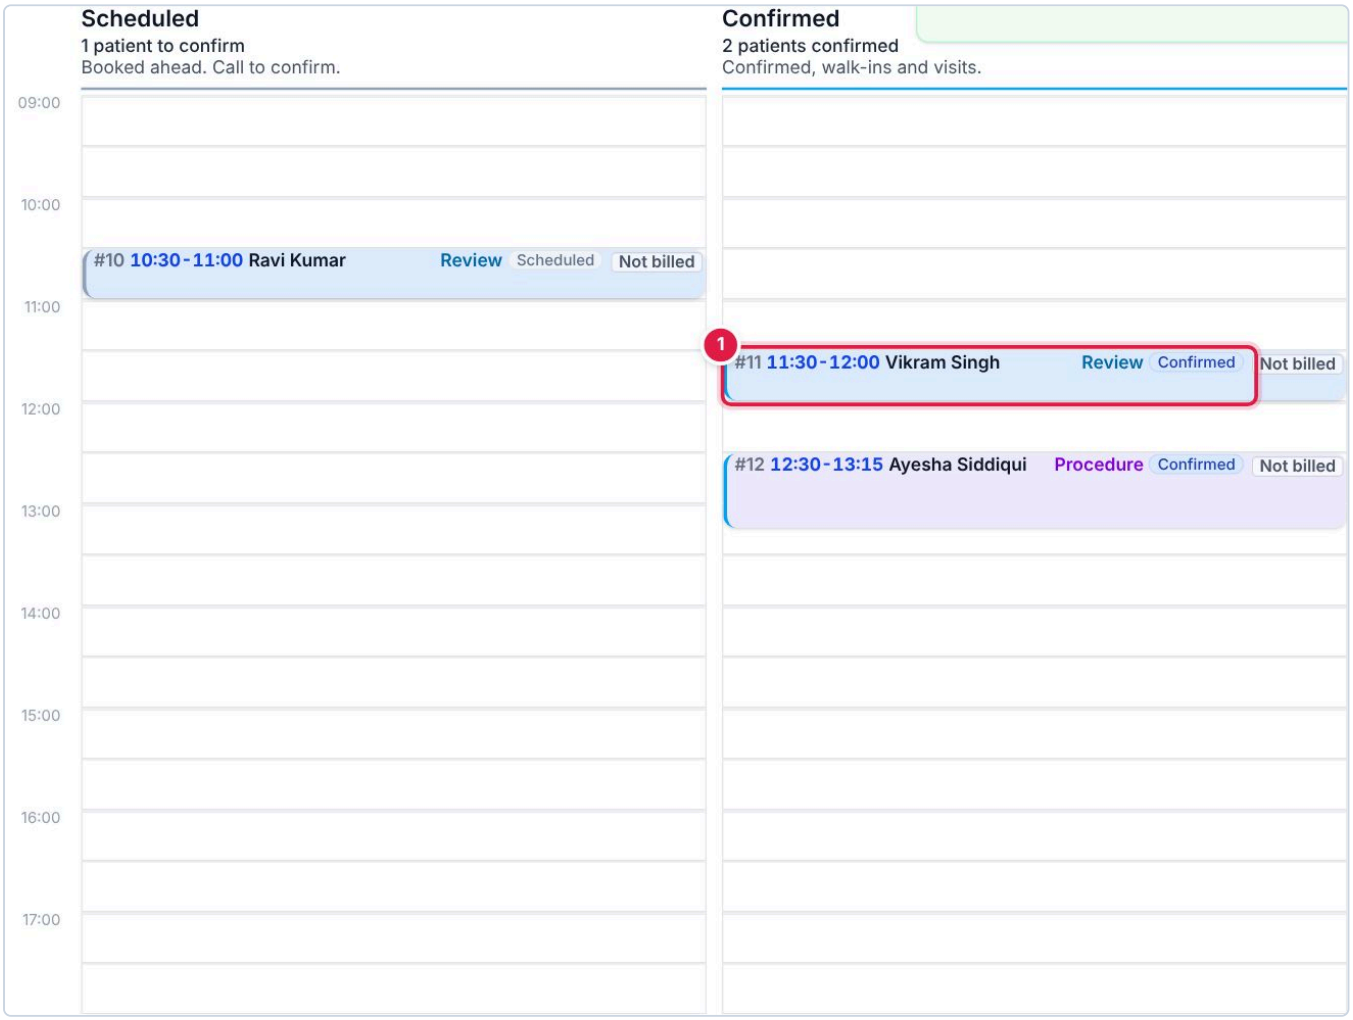

Figure 4.11. Vikram Singh confirmed: his block is now in the Confirmed column.

> **TIP**
> If the same time is already full in Confirmed, the app asks you to pick another free time in Confirmed instead, with an amber bar that says *Moving … to Confirmed*.

4.11 Reschedule an appointment

WHO USES THIS Reception

Move an appointment when the patient asks for another time. The patient, doctor, visit type and room stay the same.

1. Hold the mouse over the block and click **RESCHED**, or open the block and click **Reschedule**.
2. An amber bar says *Rescheduling* and the patient's name.
3. To move to another day, change the **Date** first. The bar stays.
4. Click a free time in either column. Clicking in the other column also moves the patient to that calendar.
5. A message says *Appointment rescheduled*. Click **Cancel** on the amber bar to stop without moving.

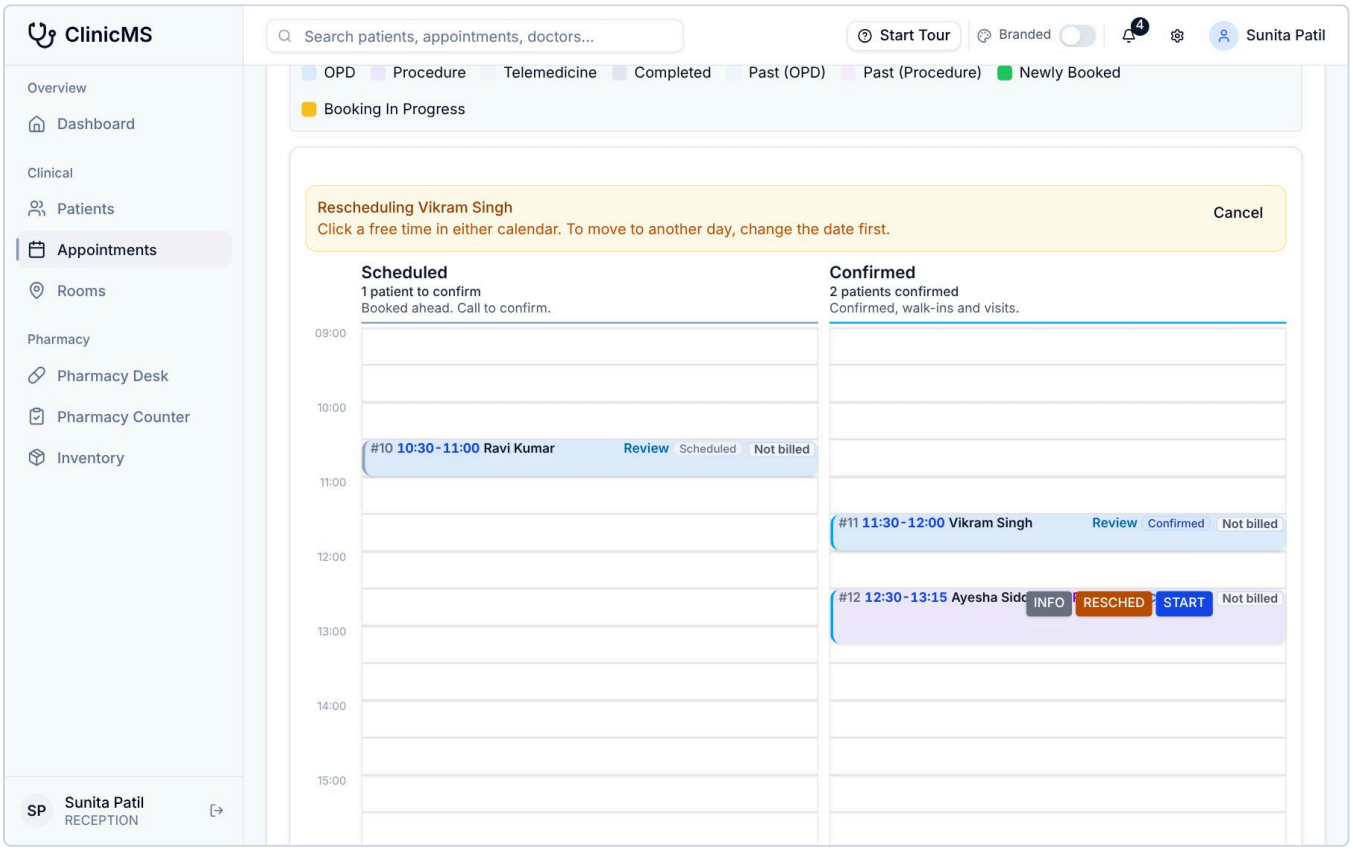

Figure 4.12. Rescheduling Vikram Singh: the amber bar and the free times to click.

4.12 Cancel an appointment

WHO USES THIS Reception

Cancel when the patient will not come. The time becomes free for someone else, and the block disappears from the calendar.

1. Click the block.
2. Click **Cancel Appointment**.
3. Check the patient, date, time and type in the window.
4. Click **Yes, Cancel Appointment**, or **Keep Appointment** to go back.

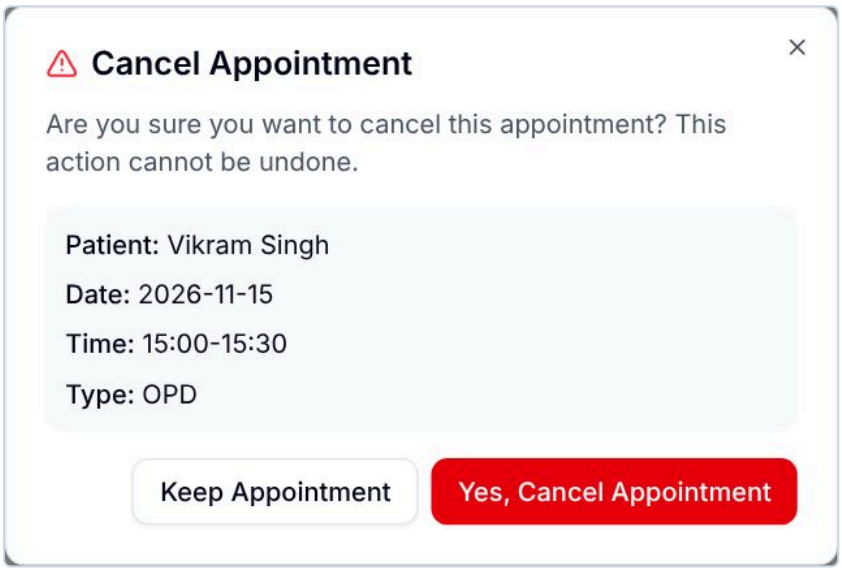

Figure 4.13. The check before cancelling.

> TAKE CARE
> A cancelled appointment cannot be brought back. Book a new one if the patient changes their mind.

4.13 Start a visit from an appointment

WHO USES THIS Doctors

When the patient is in the room, start the visit from their appointment, so the visit, the prescription and the bill are all linked to it.

Hold the mouse over the block and click **START**, or open the block and click **Start Visit**. The Visits page opens with the patient. The appointment's status changes to **In progress**. When the doctor completes the visit, it changes to **Completed** and the block turns grey. If a visit is already open for the appointment, the button reads **CONT** and reopens it.

The Visits chapter explains how to write up the visit.

4.14 Bill a consultation from the calendar

WHO USES THIS Reception (doctors see the bill state only)

The chip at the right of each block shows the bill for that appointment. The front desk can create the consultation or procedure bill and take the payment without leaving the calendar.

1. Click the chip on the block, or **Create bill** in the appointment's details. The **Bill for** window opens.
2. Check the **Bill line**. It starts as *First consultation*, *Review consultation* or *Procedure:* and the procedure name.
3. Check the **Fee**. It comes from the clinic's fee list for the bill type, and the line under it says so, for example *From fee list: Procedure ₹2,500*. You can change it for this bill. **Use ₹2,500** puts the list fee back.
4. Type what the patient pays now in **Paid now**. Leave 0 to bill now and collect later.
5. Choose the payment mode: Cash, UPI, Card, Net banking / NEFT or Cheque. For net banking or a cheque, you can type the bank reference or cheque number.
6. Click **Create bill and record** the amount (or **Create bill** when nothing is paid now).

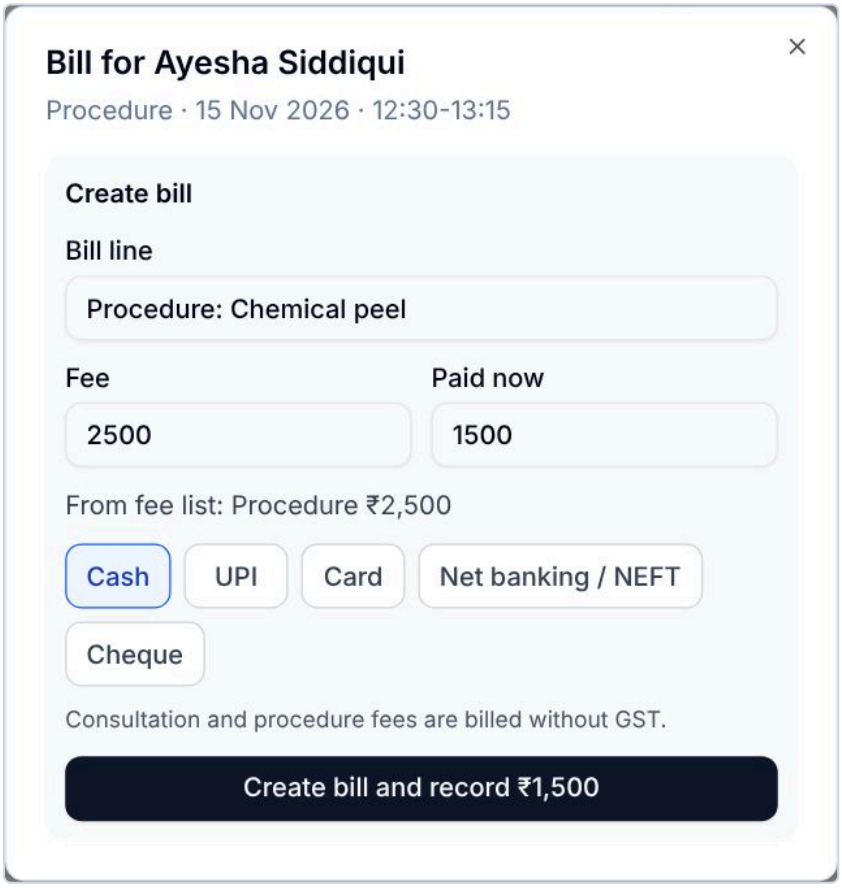

Figure 4.14. Creating the procedure bill, with ₹1,500 paid now in cash.

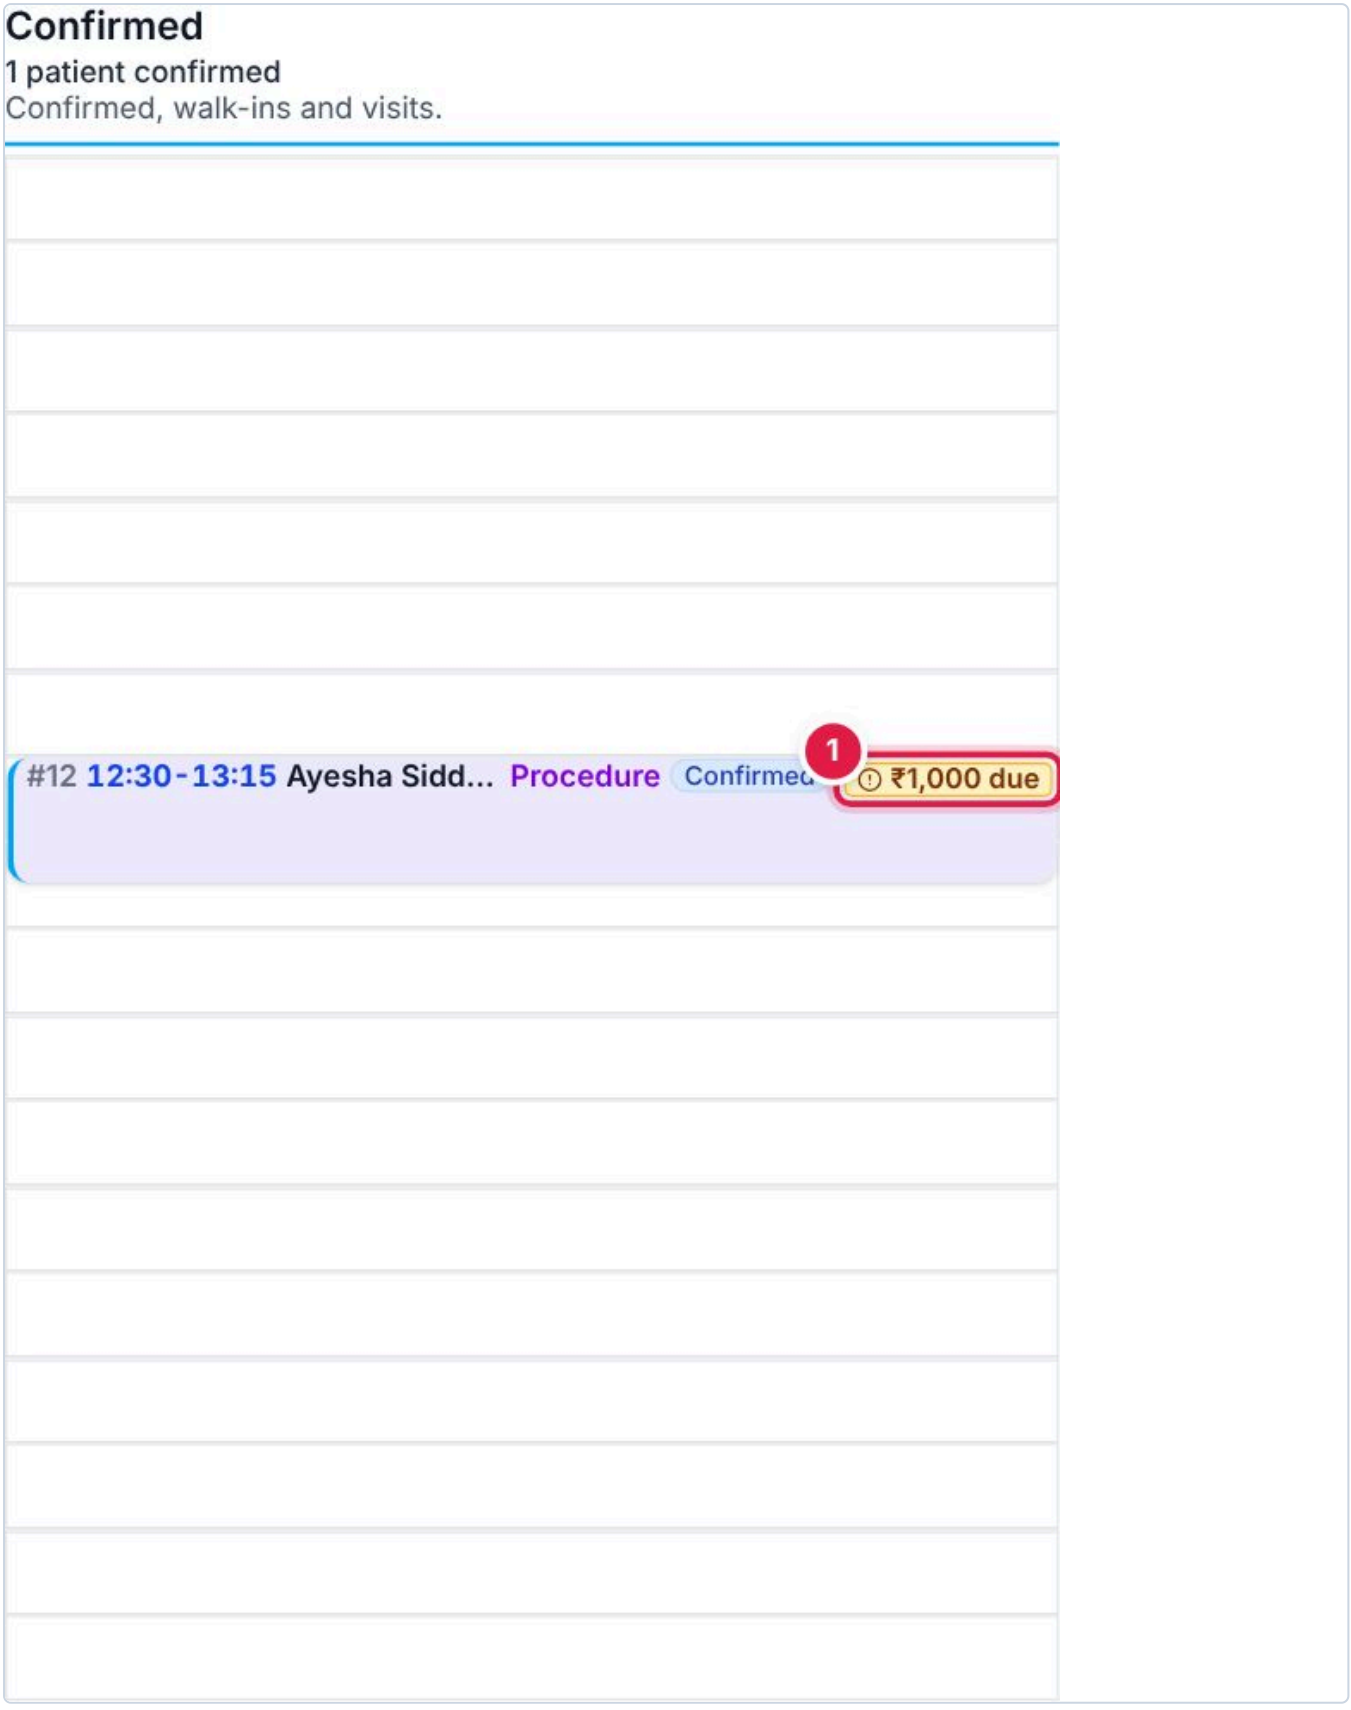

Figure 4.15. The block now shows ₹1,000 due.

CHIP	MEANING
Not billed (grey)	No bill yet.
Not billed (amber, with !)	The visit is finished and there is still no bill. Bill it.
₹1,000 due (amber)	A bill exists and this much is unpaid.
₹2,500 · Paid (green)	The bill is fully paid. With more than one bill it adds, for example, *2 bills*.

> **TIP**
> Consultation and procedure fees are billed without GST. To change the standard fees, an admin uses the Fee list page (see the Fee list chapter).

> **TAKE CARE**
> Bills and payments recorded here go into the clinic's accounts and the Daily Collection. Check the amount and mode before you save.

4.15 Take the rest of a payment

WHO USES THIS Reception

When a patient pays the balance later, record it on the same bill.

1. Click the amber **due** chip on the block.
2. Under **Record payment**, check **Amount received**. It starts at the amount due.
3. Choose the payment mode.
4. Click **Record** and the amount. The chip turns green and says **Paid**.
5. To add a separate bill to the same appointment, click **Add another bill**.

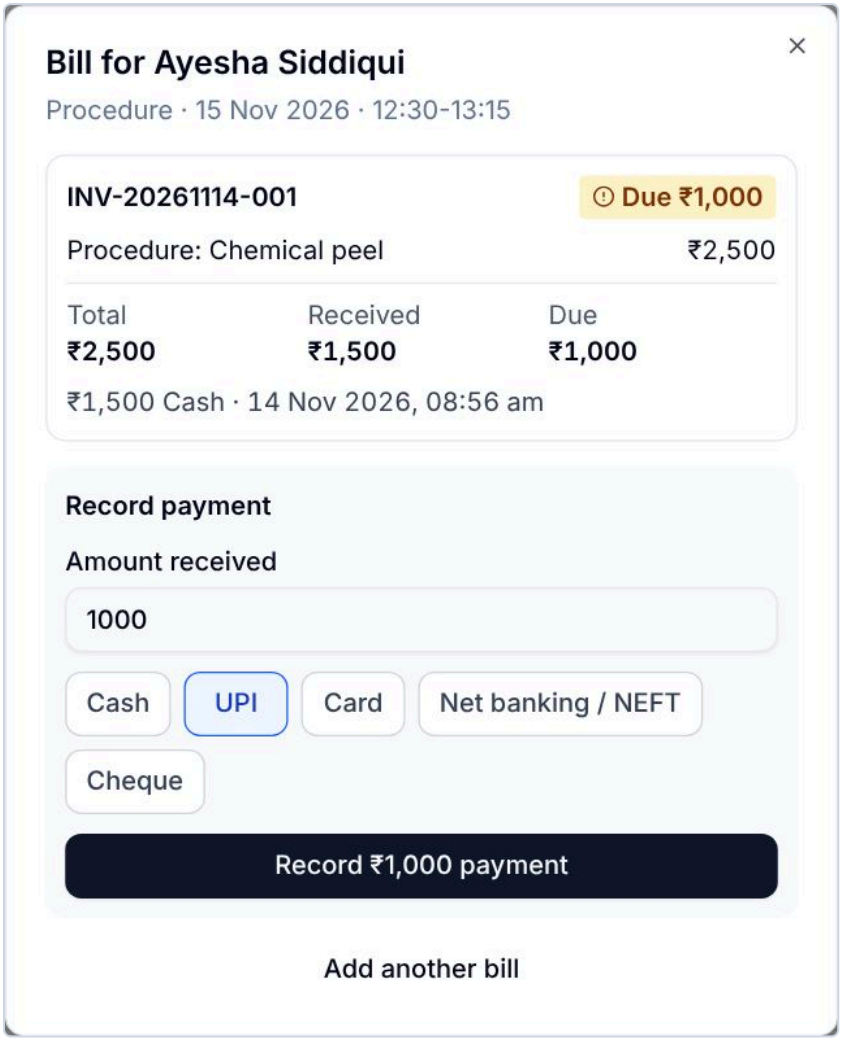

Figure 4.16. The bill with its first payment, and the balance being paid by UPI.

4.16 Overbook a full time

WHO USES THIS Reception

Some doctors see more than one patient in the same slot. An admin sets this as **Patients per slot** in the doctor's availability (see the Users chapter). When the doctor allows it, a booked time shows a small **Overbook 1/2** label: one patient booked, two allowed. Clicking it books a second patient after a check.

1. Select the patient and click the booked time in the column you want.
2. Fill in the **Book Appointment** window and click **Confirm Booking**.
3. The **Overbook this slot?** window says how many patients the time already has. Click **Book anyway**, or **Cancel** to pick another time.
4. The two bookings sit side by side in the column.

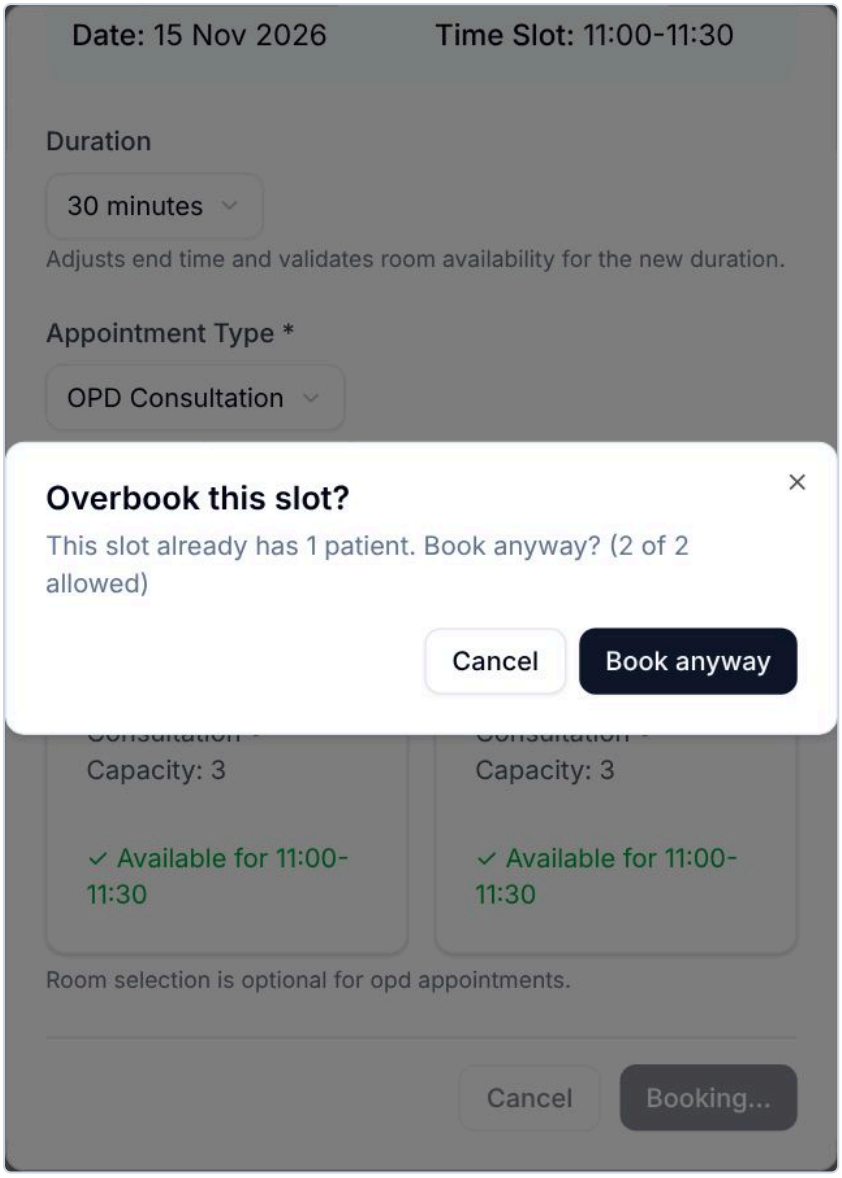

Figure 4.17. The check before a second patient is booked into 11:00.

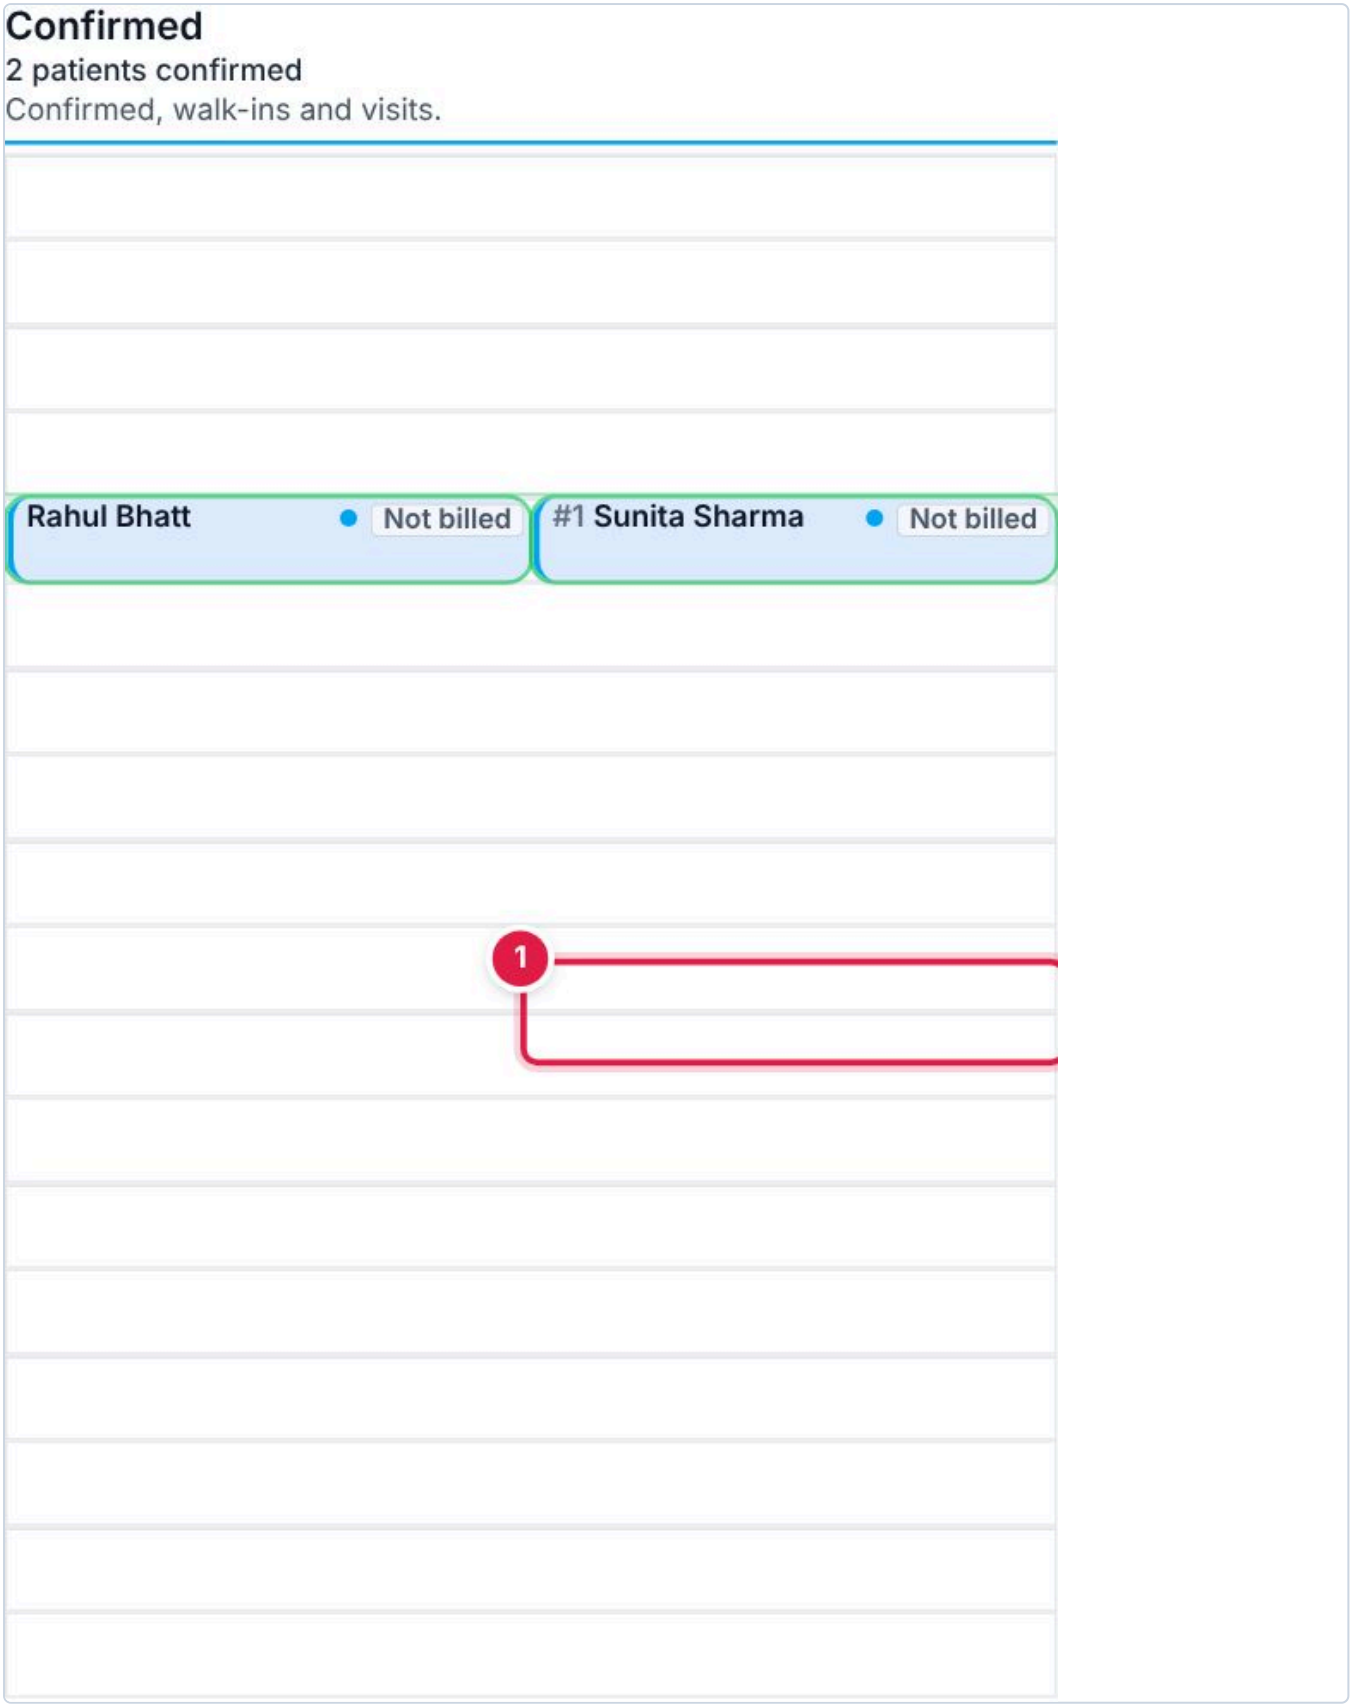

Figure 4.18. Two patients at 11:00 in Dr. Arvind Shetty's Confirmed column.

4.17 Use the Slots tab

WHO USES THIS Reception

The **Slots** tab shows the same two columns. Instead of a grid size it has a **Duration** list (10 to 90 minutes), which sets the length of the times you click. The chosen patient appears in a green **Selected Patient** box with their ID, phone and email, and a **Clear** button. Booking, confirming, moving and cancelling work as on the Calendar tab.

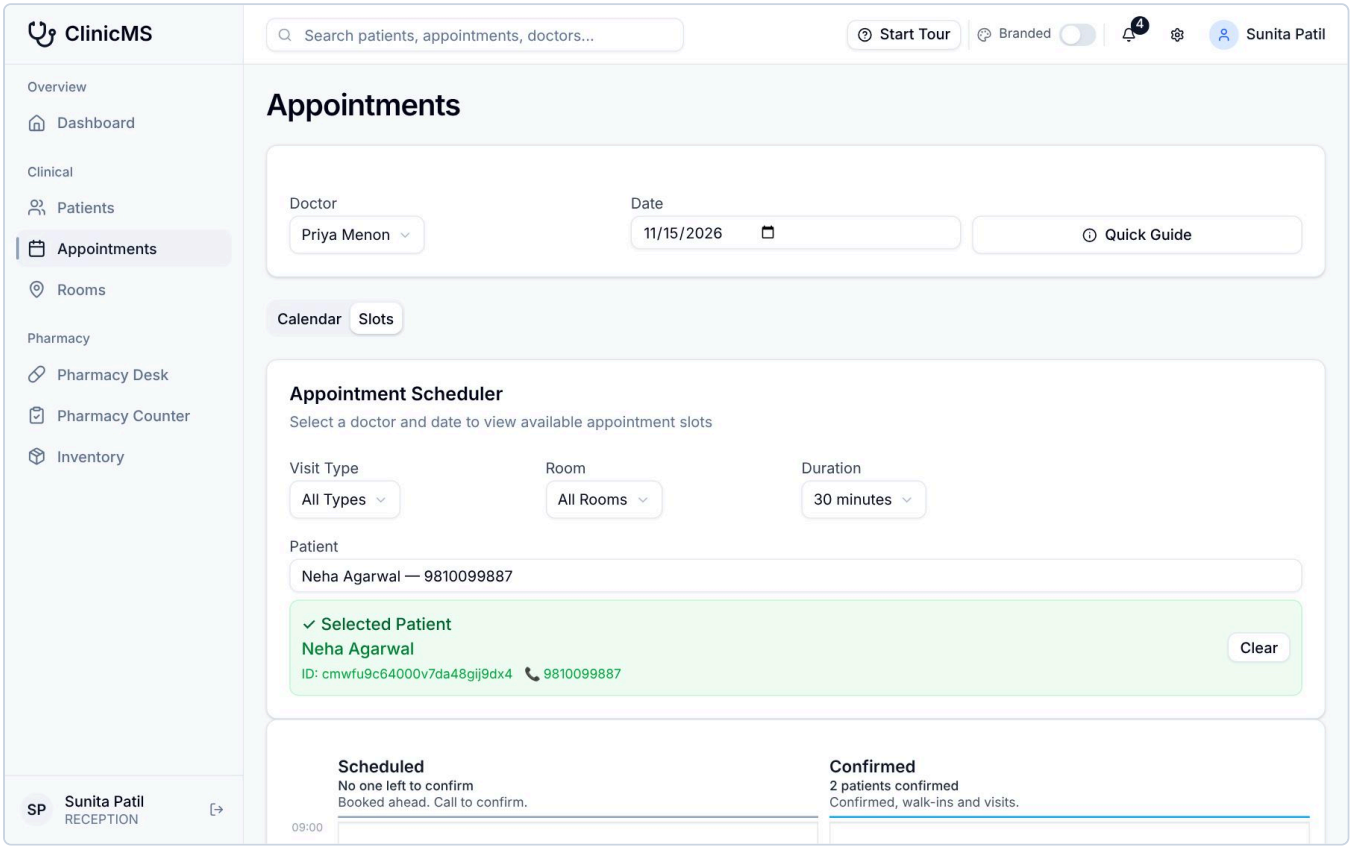

Figure 4.19. The Slots tab with a patient selected.

4.18 The doctor's view

WHO USES THIS Doctors

A doctor sees the same page. Most doctors use it to see who is waiting and to click **START** on the next patient. A doctor can book, confirm and move appointments like reception. The bill chips show the bill state, but only staff allowed to take payments can create a bill or record a payment from them.

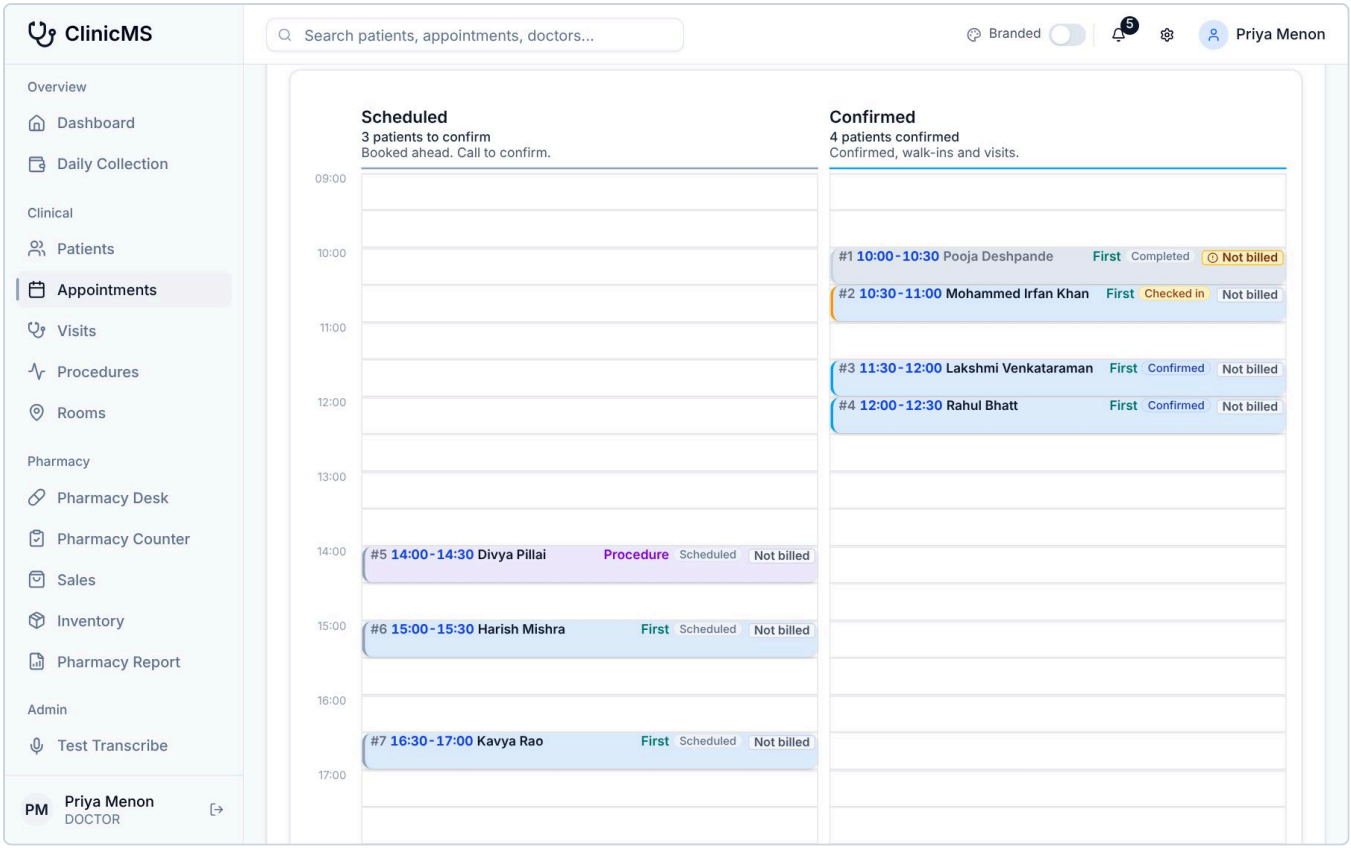

Figure 4.20. Dr. Priya Menon's own day.

4.19 Sync with Google Calendar

WHO USES THIS Doctors

When the clinic has set up Google Calendar, a **Sync with Google Calendar** button appears at the top right of the Doctor Calendar. A doctor clicks it, signs in to Google and allows access. Their appointments are then copied to their Google Calendar, and the button is replaced by **Syncing** with their account and a **Disconnect** button.

A green bar under the title says when the chosen doctor's appointments sync. An amber bar says when they do not, and asks the doctor to connect their own calendar. If the clinic has not set up Google Calendar, none of this appears.

4.20 Quick Guide

WHO USES THIS Everyone who uses Appointments

The **Quick Guide** button beside the date opens a short reminder of how the two columns and booking work.

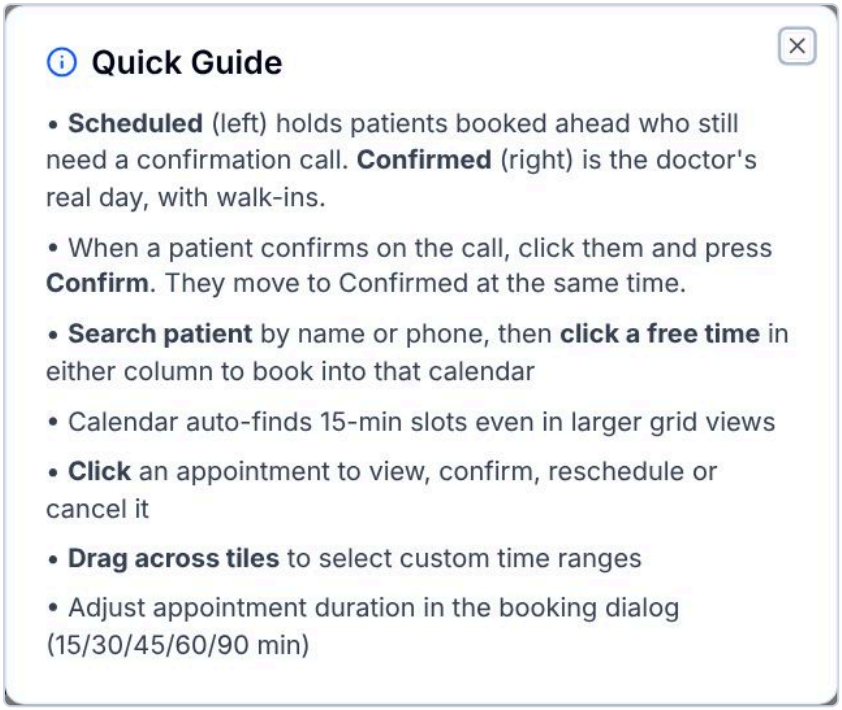

Figure 4.21. The Appointments Quick Guide.

CHAPTER 5

Rooms

The Rooms page shows which consultation and procedure rooms are in use at each time of the day, and holds the list of rooms the clinic has. Reception uses it to see where a patient will be seen. Admins and doctors use it to add rooms and switch rooms on or off.

5.1 See which rooms are in use today

WHO USES THIS Reception, doctors, nurses, admins

Open **Rooms** from the menu. The page opens on the **Calendar View** tab for today. Each column is one active room, and each coloured block is an appointment booked into that room. An appointment only appears here when a room was chosen while booking it (see the Appointments chapter).

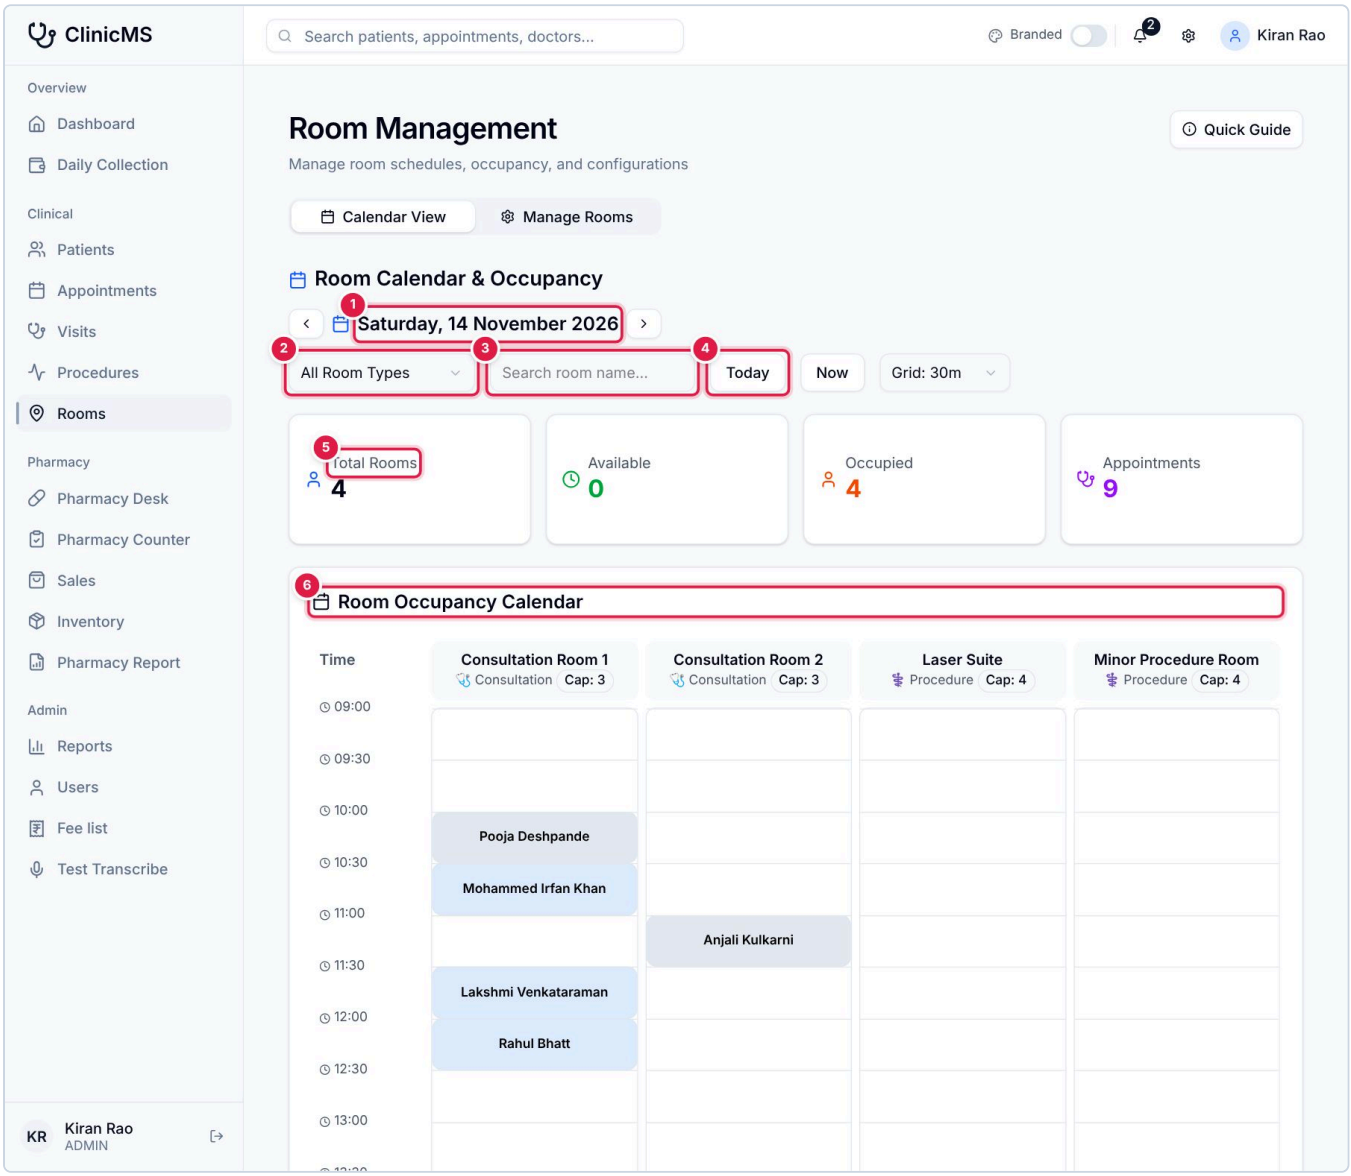

Figure 5.1. The Calendar View for today, with four rooms and their appointments.

PART OF THE SCREEN	WHAT IT DOES
1. Date and arrows	The day you are looking at. The left and right arrows move one day back or forward.
2. Room type	Shows only rooms of one type, for example only **Procedure** rooms. The list offers the types your rooms use.
3. Search room name	Type part of a room name to show only matching rooms.
4. Today, Now and Grid	**Today** returns to today's date. **Now** scrolls the calendar to the current time. **Grid** sets how far apart the time lines are: 10, 15, 20, 30, 45 or 60 minutes.
5. Counters	Four totals for the rooms shown. See the table in the next section.
6. Room Occupancy Calendar	One column per room, with the time down the left from 09:00 to 18:00. Under each room name you see its type and **Cap**, the number of people it holds.

5.2 Read the counters

WHO USES THIS Everyone who opens Rooms

The four boxes above the calendar sum up the day you are looking at.

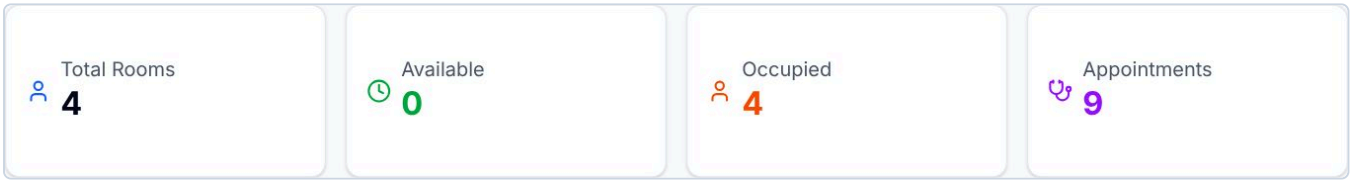

Figure 5.2. The four counters for today.

COUNTER	WHAT IT COUNTS
Total Rooms	How many active rooms are shown, after the room type and search filters.
Available	Rooms shown that have no appointment at all on this day.
Occupied	Rooms shown that have at least one appointment on this day. A room counts as occupied for the whole day, even if it is free right now.
Appointments	The number of appointments booked into any room on this day. This total counts every room, even when the room type or search filter hides some of them.

5.3 Check the details of a booked room

WHO USES THIS Reception, doctors, nurses

Each block starts at the appointment's start time and is as tall as the appointment is long. It shows the patient's name. For a procedure it also shows the procedure name in brackets, for example *Laser hair reduction, session 3*. When two appointments overlap in one room, they sit side by side.

Hold the mouse over a block to see the full details in a card beside it. Move the mouse into the card to keep it open while you read it.

1. Find the room column and the time.
2. Hold the mouse over the block.
3. Read the card: patient name, date and time, phone, doctor, visit type, status, procedure notes and room.

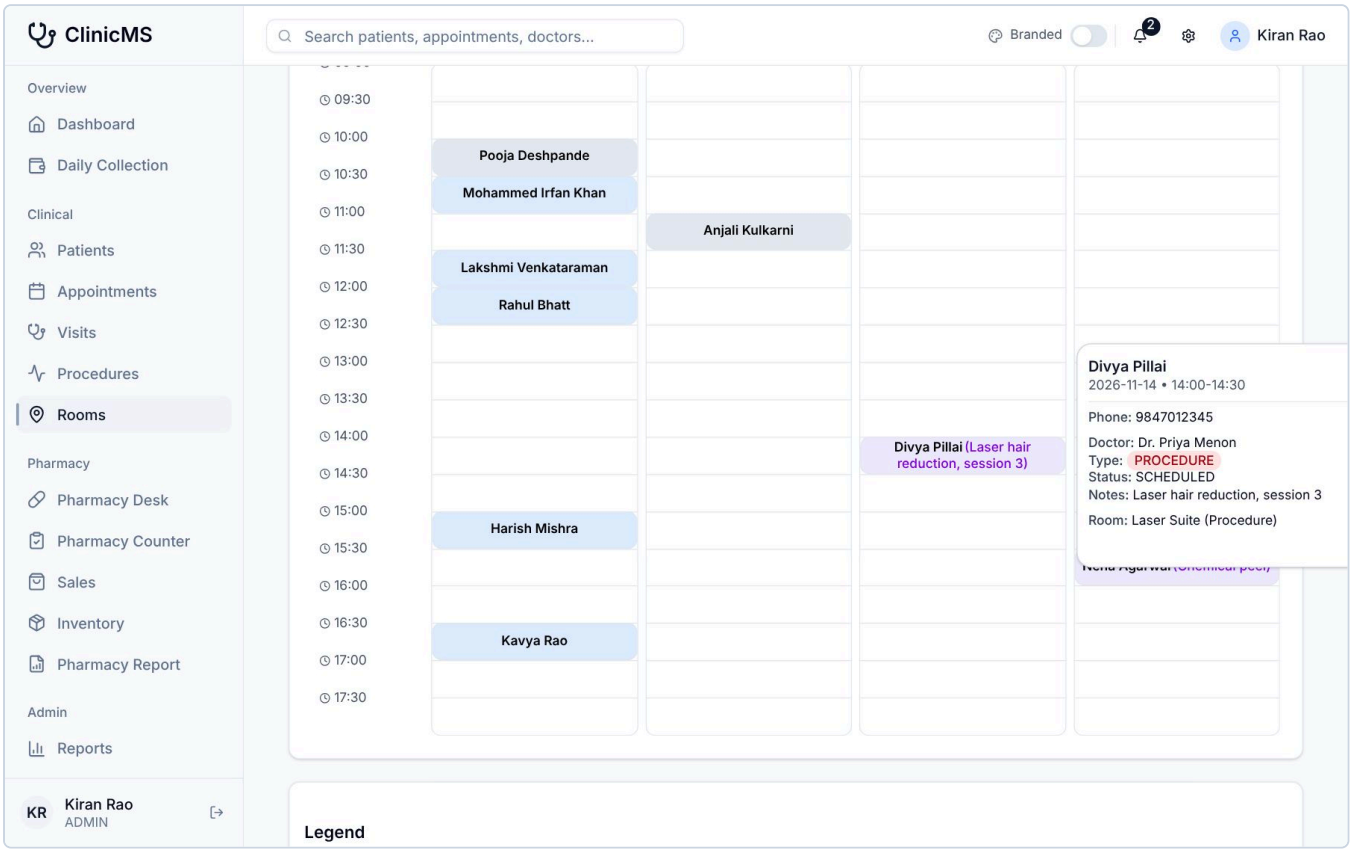

Figure 5.3. Holding the mouse over the Laser Suite booking shows its details.

IN THE CARD	MEANING
Status	The appointment's status, written in capitals, for example SCHEDULED, CONFIRMED, CHECKED_IN or COMPLETED. The Appointments chapter explains each status.
Type	OPD (a consultation), PROCEDURE or TELEMED (a video consultation).
Notes	Shown for procedures: the procedure name typed when booking.

5.4 Understand the colours

WHO USES THIS Everyone who opens Rooms

The colour of a block tells you the kind of appointment and whether it has happened. The legend under the calendar repeats these colours.

Figure 5.4. The legend under the room calendar.

COLOUR	MEANING
Available	A pale green swatch. Empty space in a column means the room is free at that time.
OPD	Blue. A consultation booked into the room.
Procedure	Purple. A procedure booked into the room.
Telemedicine	Grey. A video consultation that was given a room.
Completed	Light grey. The visit for this appointment is finished.
Past (OPD) and Past (Procedure)	A paler blue or purple. The appointment's time has passed today but it is not marked completed.

5.5 Look at another day or one type of room

WHO USES THIS Reception, doctors

Use the arrows to plan tomorrow's procedures, or narrow the calendar to the rooms you care about. The filters only change what you see. They do not change any booking.

1. Click the right arrow beside the date to move to tomorrow. Click the left arrow to go back a day.
2. Open the room type list and choose **Procedure** to show only the procedure rooms.
3. To find one room, type part of its name in **Search room name**.
4. Click **Today** to come back to today, and **Now** to scroll to the current time.
5. Choose a **Grid** size to space the time lines further apart or closer together.

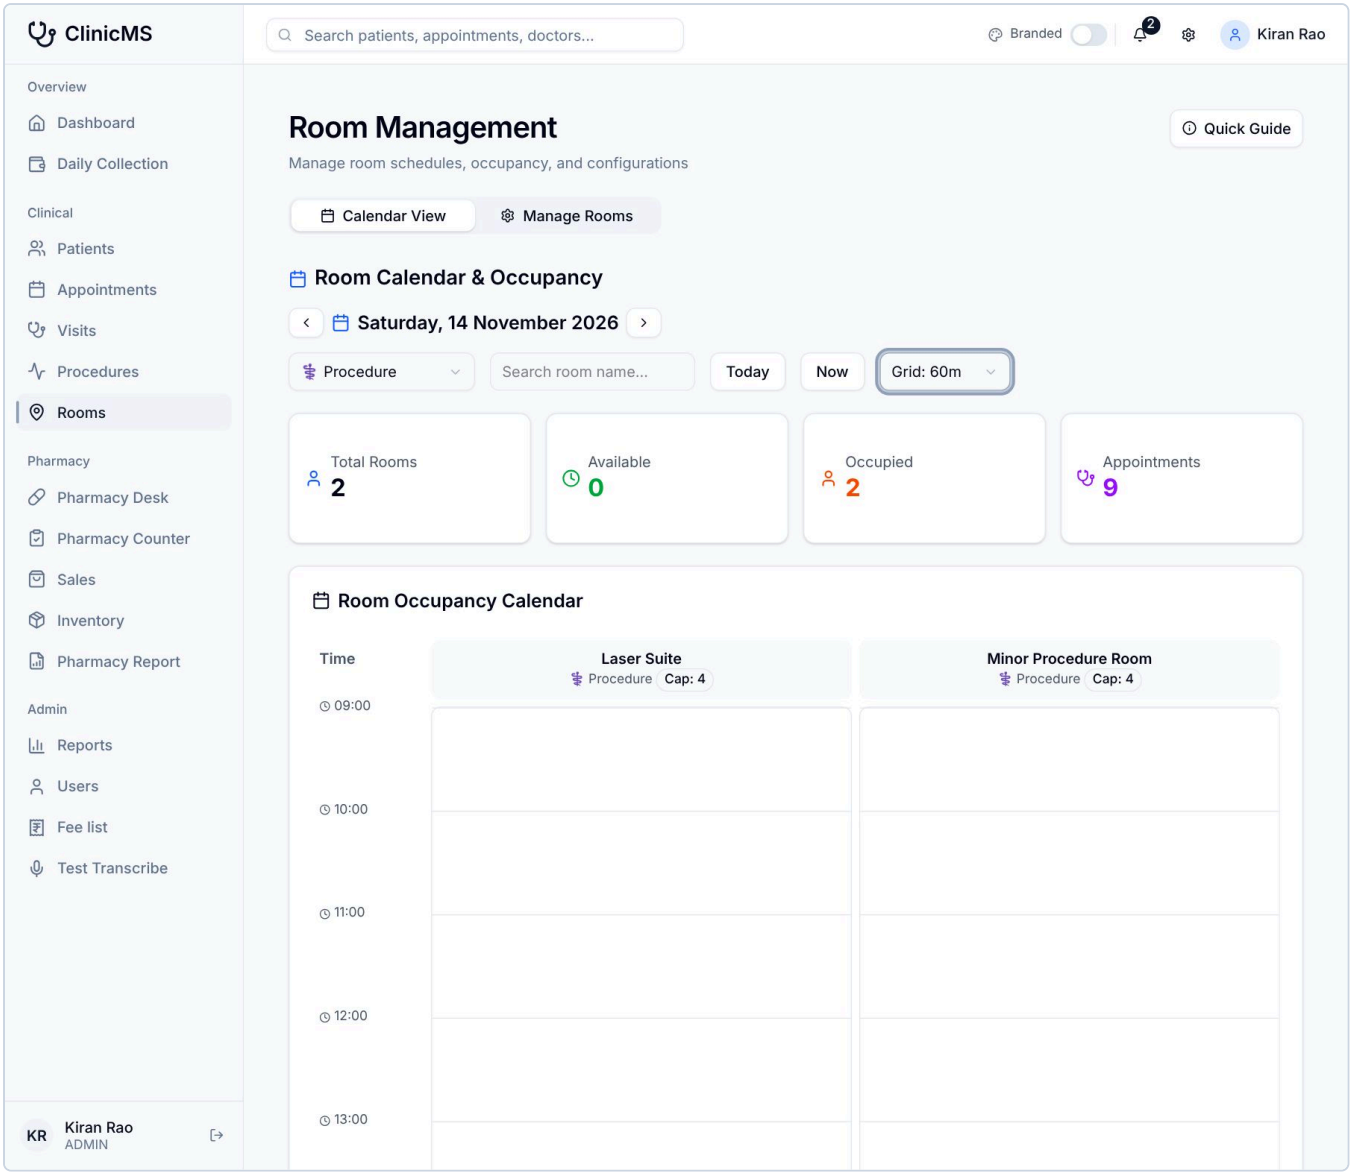

Figure 5.5. Only the procedure rooms, with a 60-minute grid.

5.6 See the list of rooms

WHO USES THIS Admins and doctors (reception and nurses do not see this tab)

Click the **Manage Rooms** tab. It lists the clinic's active rooms with its type, capacity, status and the date it was added. The boxes at the top count the active rooms: all of them, then the consultation, procedure and telemedicine rooms.

Use the search box, the type list and the status list (**All**, **Active**, **Inactive**) to find a room in a long list. The list holds the active rooms, so **Inactive** only finds a room you switched off since you opened the page.

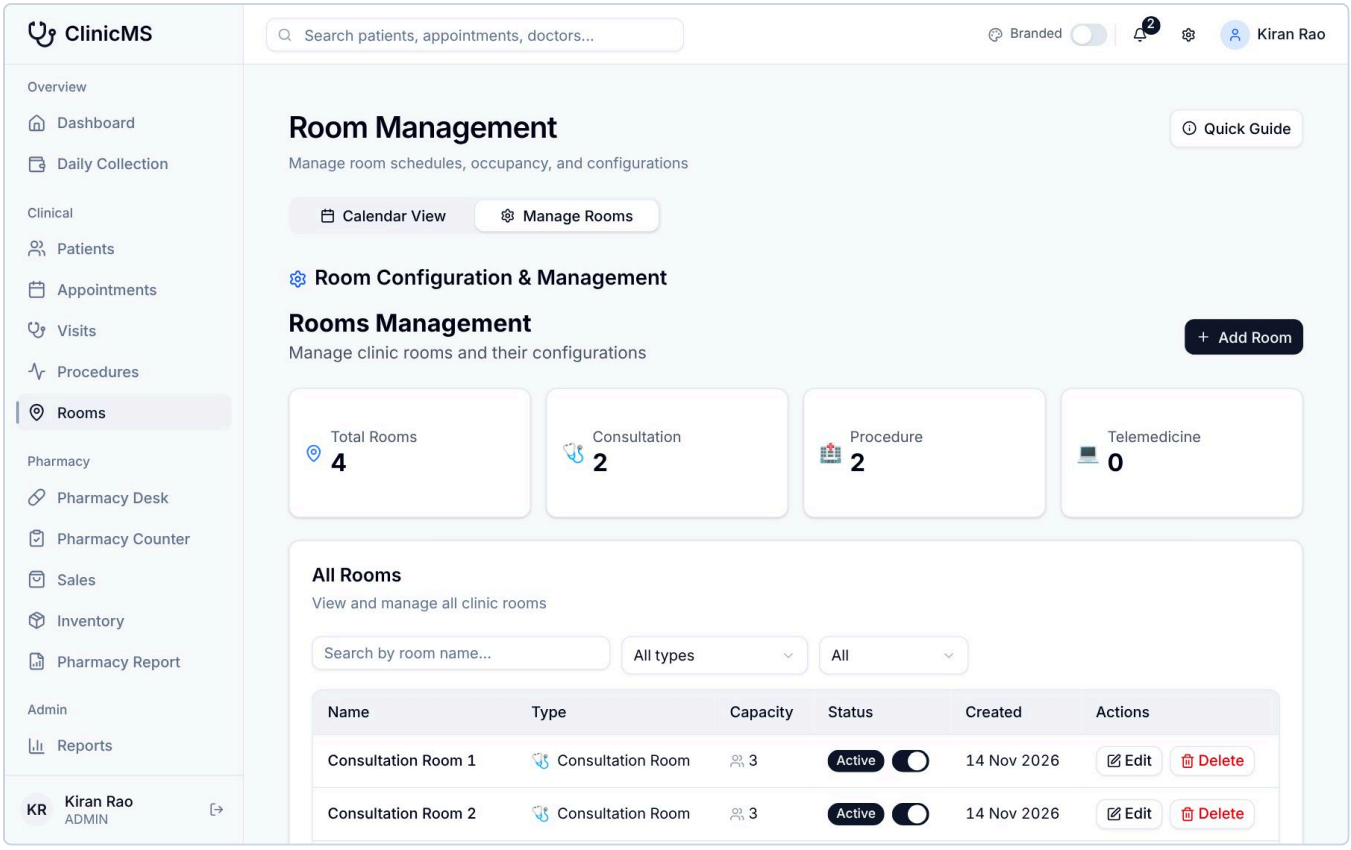

Figure 5.6. Manage Rooms: the counters, filters and the list of rooms.

COLUMN	MEANING
Name	The room's name as it appears when booking and on the room calendar.
Type	What the room is used for. The booking window offers consultation rooms for OPD visits and procedure rooms for procedures.
Capacity	How many people the room holds. It is shown for information and on the room calendar.
Status	**Active** rooms can be booked and appear on the calendar. **Inactive** rooms are hidden from both. The switch beside the badge changes it.
Actions	**Edit** changes the room. **Delete** removes it.

5.7 Add a room

WHO USES THIS Admins and doctors

Add a room when the clinic opens a new consultation or procedure room, so that staff can book patients into it.

1. On **Manage Rooms**, click **Add Room**.
2. Type the **Room Name**, for example *Phototherapy Room*.
3. Choose the **Room Type**. The types are listed in the table below.

4. Type the **Capacity**: the number of people the room holds.
5. Leave **Room is active** ticked if the room can be booked now.
6. Click **Add Room** at the bottom of the window. The new room appears in the list and on the room calendar.

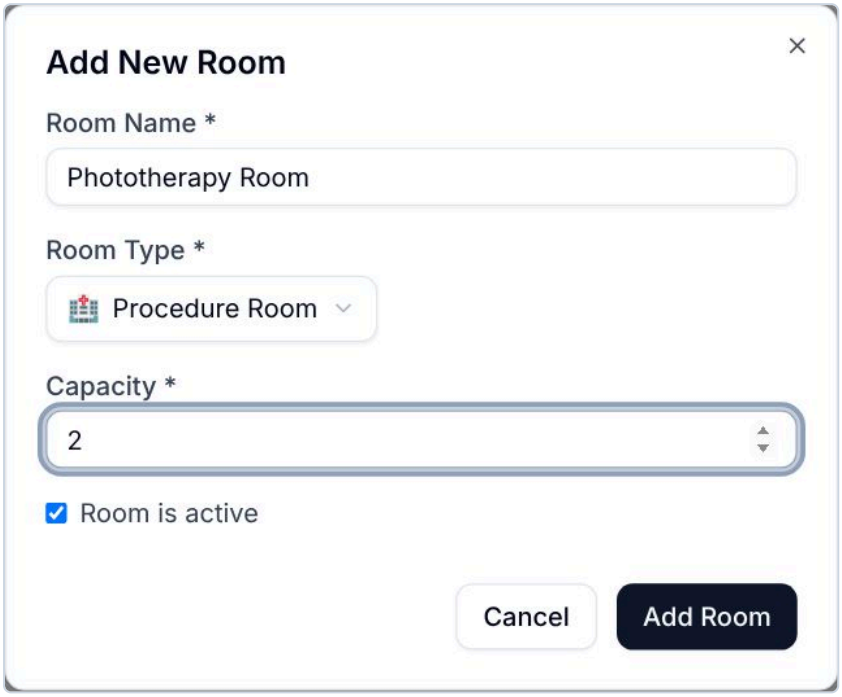

Figure 5.7. The Add New Room window, filled in.

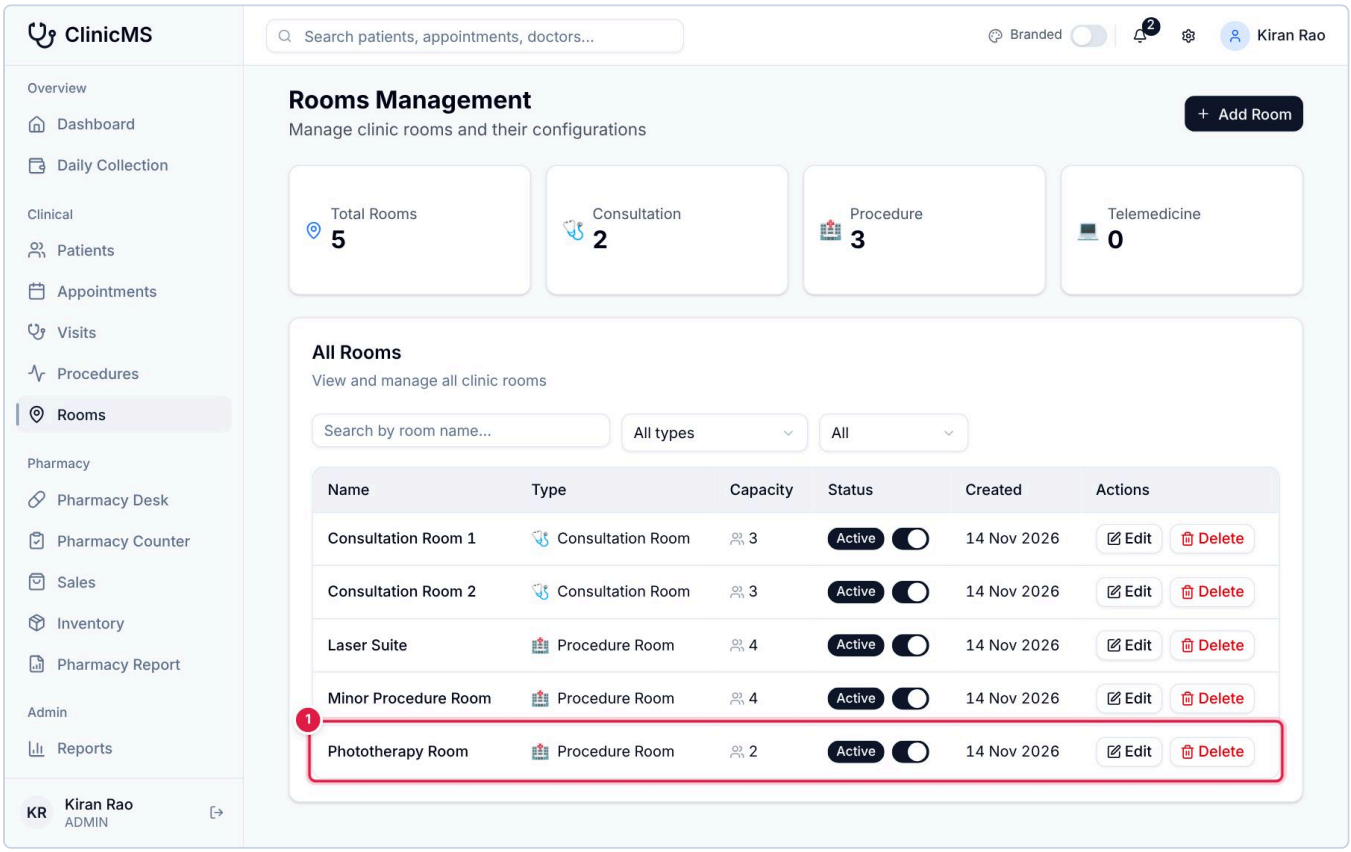

Figure 5.8. The Phototherapy Room is now in the list.

ROOM TYPE	USE IT FOR
Consultation Room	For OPD consultations.
Procedure Room	For procedures such as peels and lasers. A procedure booking needs a room.
Operation Theater	For surgical procedures.
Telemedicine Suite	For video consultations.
Emergency Room, Recovery Room, Waiting Area	Other clinical spaces.
Laboratory, Imaging Room, Pharmacy	Support areas you may want to track.

5.8 Change a room's name, type or capacity

WHO USES THIS Admins and doctors

Edit a room when it is renamed, re-equipped, or holds a different number of people. Appointments already booked into the room stay booked.

1. On **Manage Rooms**, click **Edit** on the room's row.
2. Change the name, type or capacity.
3. Click **Update Room**.

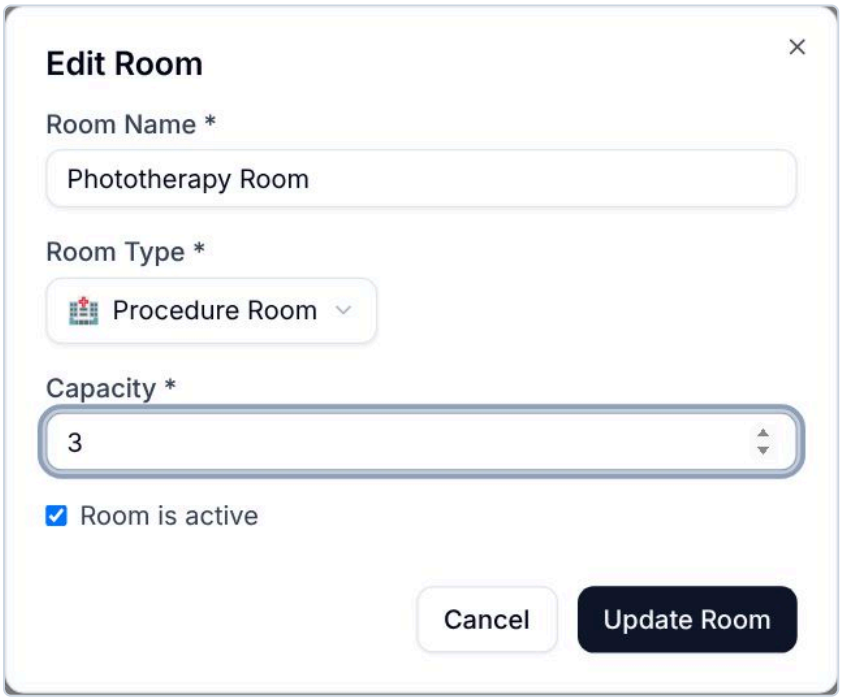

Figure 5.9. Editing the Phototherapy Room to hold three people.

5.9 Switch a room off or on

WHO USES THIS Admins and doctors

Switch a room off while it is under repair or not in use. An inactive room keeps its history but cannot be booked, and it disappears from the room calendar and from the booking window. Switch it on again when it is ready.

1. On **Manage Rooms**, find the room's row.
2. Click the switch beside the **Active** badge. The badge changes to **Inactive** and a message confirms *Room deactivated*.
3. To bring the room back while you are still on the page, click the switch again. The message says *Room activated*.

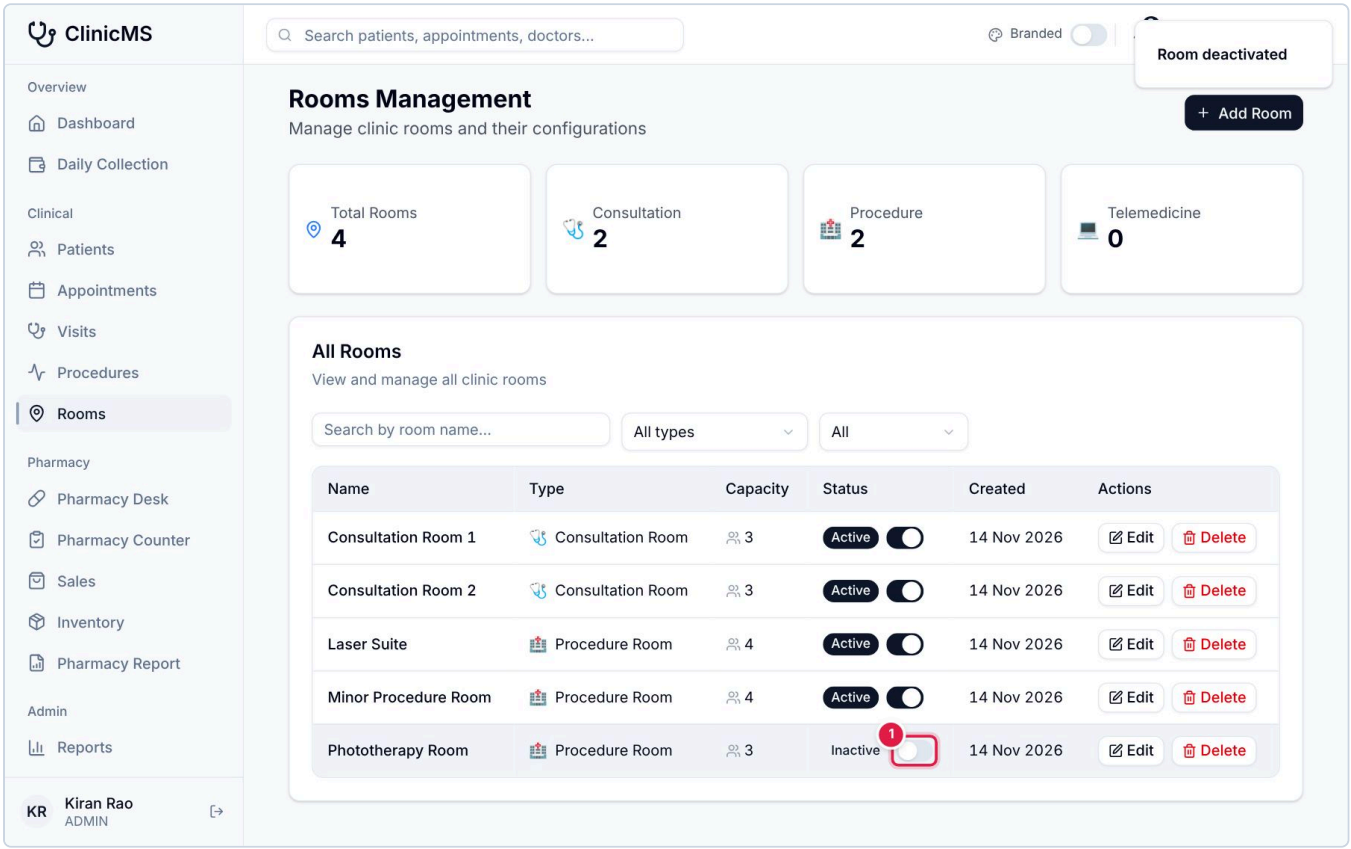

Figure 5.10. The Phototherapy Room switched off. Its badge now says Inactive.

TAKE CARE

The list only shows active rooms when it loads. Once you leave the page or reload it, an inactive room is no longer listed, and you cannot switch it back on from this screen. If you switched a room off by mistake, switch it on again before you leave the page.

5.10 Delete a room

WHO USES THIS Admins and doctors

Delete a room only when the clinic no longer has it. If you might use it again, switch it off instead.

1. On **Manage Rooms**, click **Delete** on the room's row.
2. The browser asks *Are you sure you want to delete* the room. Click **OK** to delete it, or **Cancel** to keep it.
3. A message confirms *Room deleted* and the row disappears.

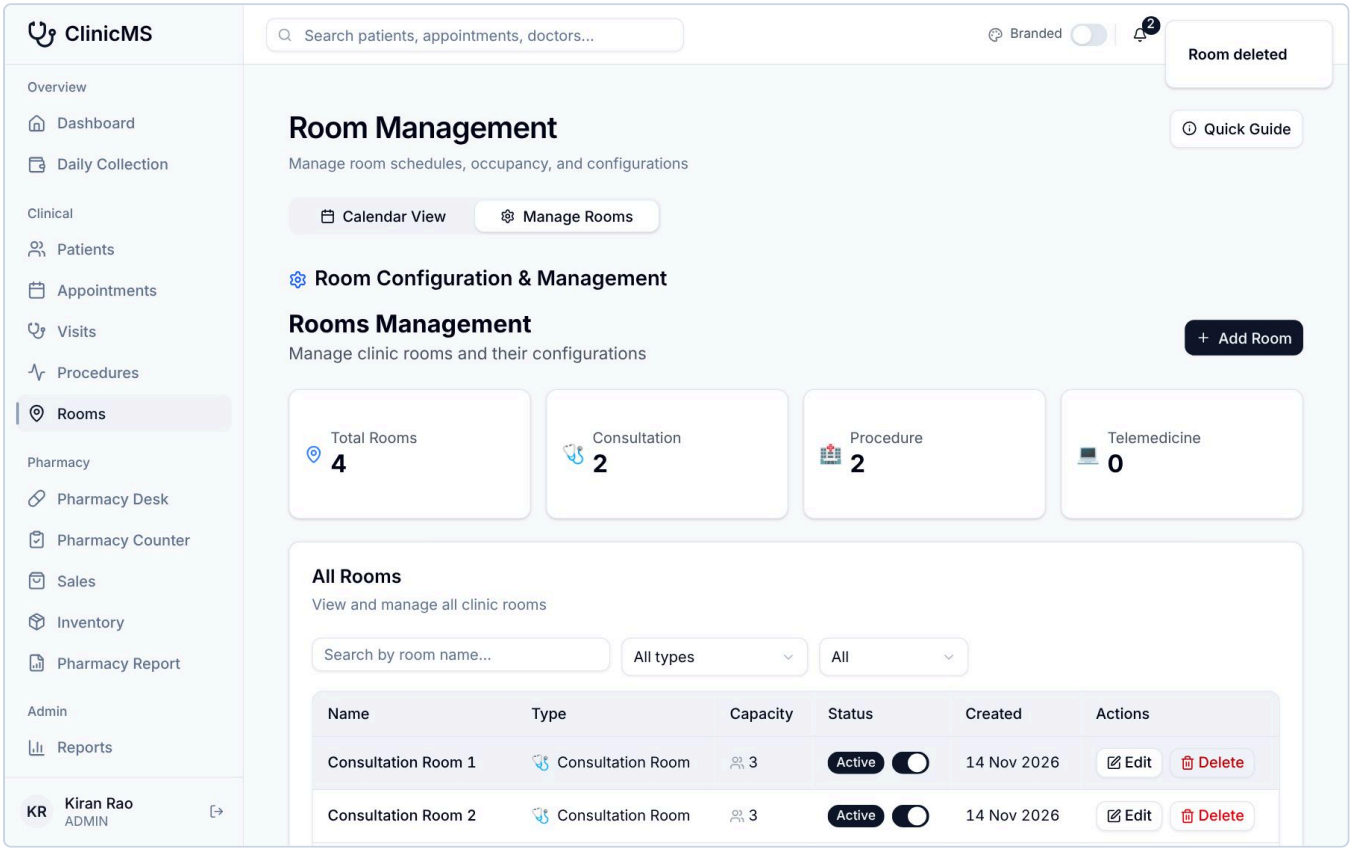

Figure 5.11. After deleting the Phototherapy Room, the list is back to four rooms.

> **TAKE CARE**
> Deleting a room cannot be undone.

5.11 Quick Guide

WHO USES THIS Everyone who opens Rooms

The **Quick Guide** button at the top right of the page opens a short summary of the Rooms page. Some of its points describe plans for later versions, such as room amenities, maintenance schedules and reassigning a room from the calendar. Those are not on the screen yet. This chapter describes what the page does today.

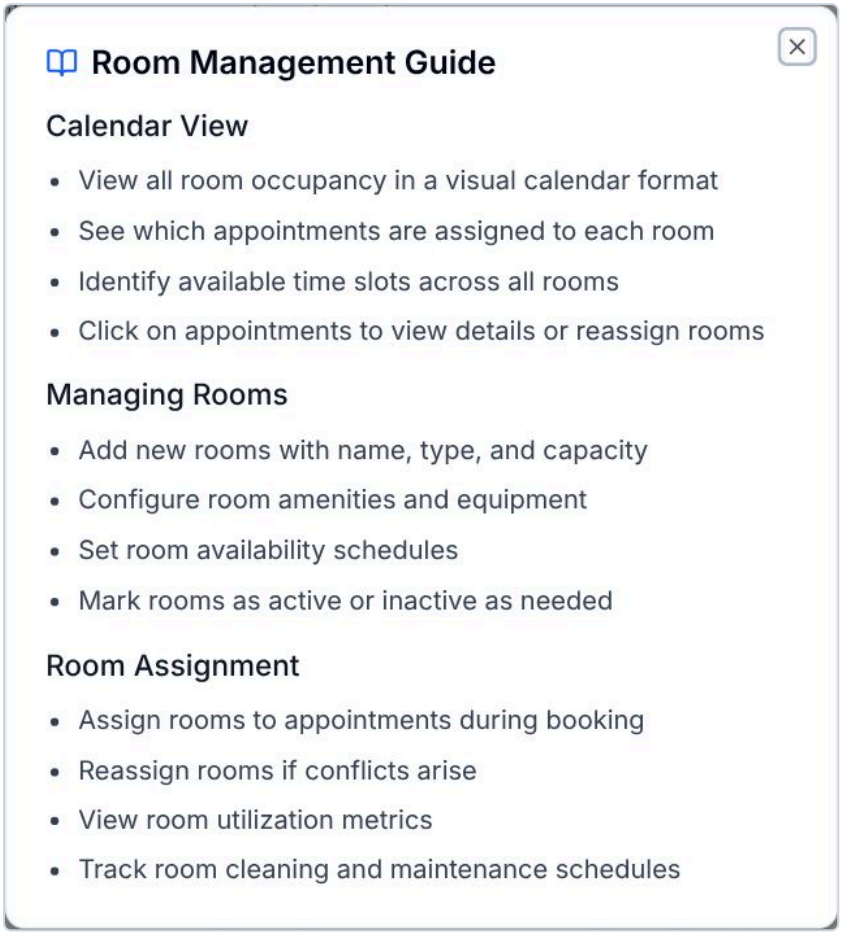

Figure 5.12. The Room Management Quick Guide.

CHAPTER 6

Visits

A visit is the clinical record of one consultation: vitals, photos, lab results, the prescription and the notes the doctor writes. The Visits page is where doctors document a consultation from start to finish, and where nurses record vitals and photos before the doctor sees the patient. This chapter covers starting, filling, saving and completing a visit. Writing and printing the prescription has its own chapter.

6.1 Open the Visits page

WHO USES THIS Doctors, nurses, admins, owners

Open **Visits** from the Clinical part of the menu. The first screen has three boxes. **Your Role & Permissions** shows the role you are signed in with and what it lets you record. **Start New Visit** is where you choose the patient and doctor. **Available Features** lists the parts of the visit your role can fill in.

Most visits are opened from somewhere else: the **Start Visit** button on an appointment, a patient's page, or a link on the Dashboard. All of them land on the visit form described below.

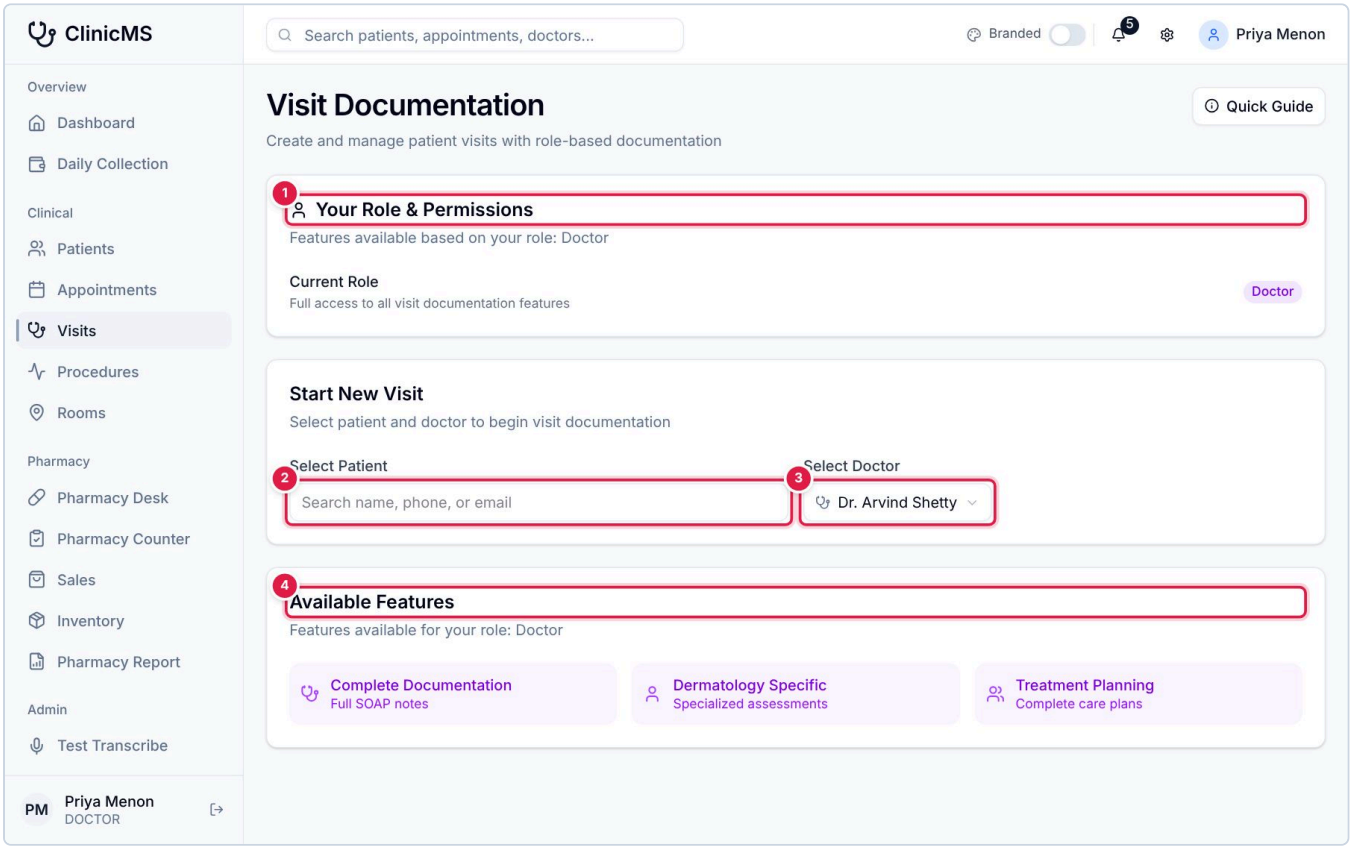

Figure 6.1. The Visits page for a doctor.

ON SCREEN	WHAT IT IS
1. Your Role & Permissions	Your role and a one-line summary. A purple **Doctor** badge means full access to every part of the visit.
2. Select Patient	Search by name, phone or email.
3. Select Doctor	The consulting doctor.
4. Available Features	What your role can record. For a doctor: complete documentation, dermatology assessments and treatment planning.

6.2 Start a new visit

WHO USES THIS Doctors and nurses

Use this when the patient has no appointment in the system, for example a walk-in, or when you want to document a visit straight away.

1. Click in **Select Patient** and type part of the patient's name, phone number or email. Matching patients appear in a list. Use the arrow keys and Enter, or click the patient.
2. Check **Select Doctor**. The box starts with the first doctor in the clinic's list, which may not be you. Click it and choose the consulting doctor.
3. Two tabs appear below. **Ready to Start** shows the patient and doctor you chose. Click **Start Visit Documentation**.

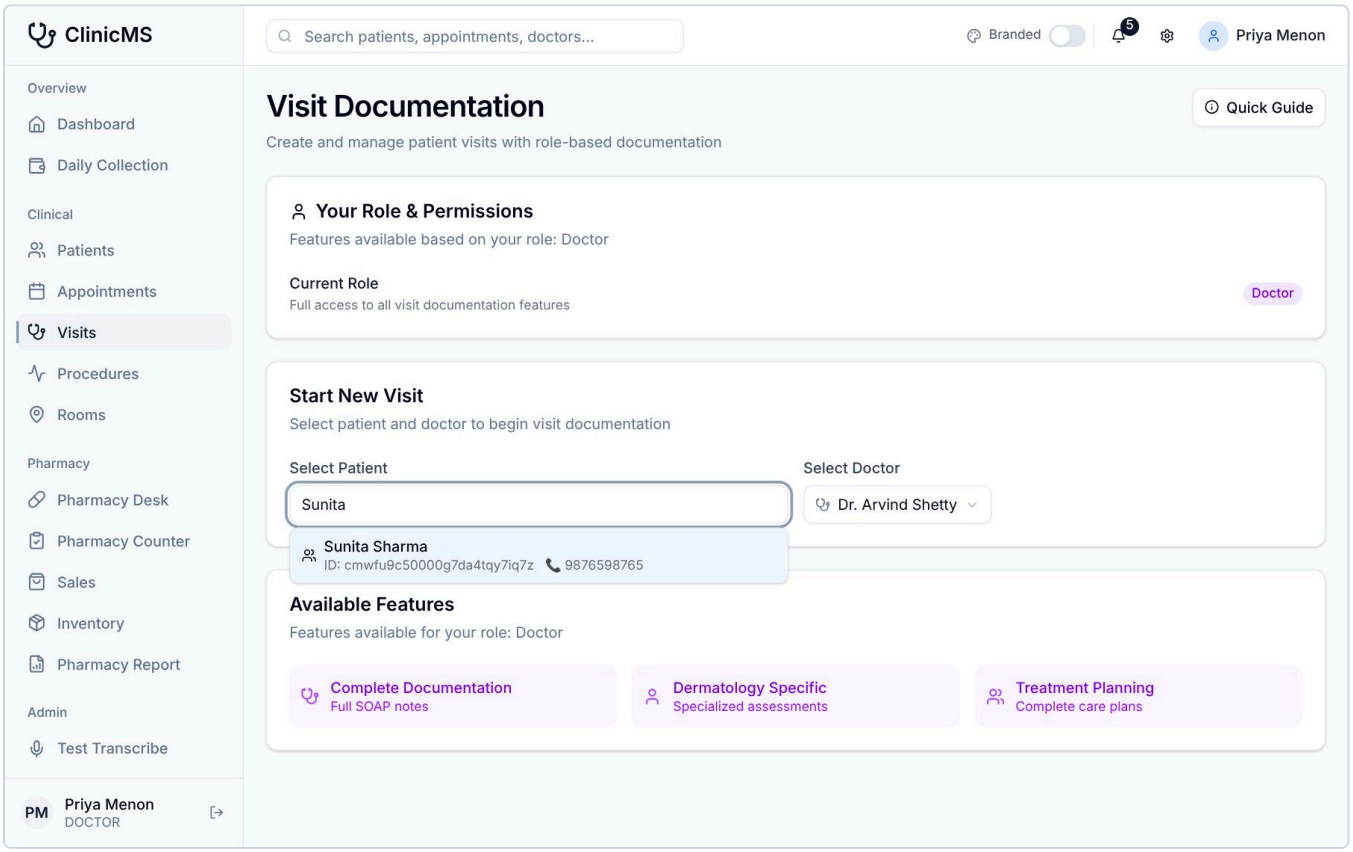

Figure 6.2. Typing part of a name lists the matching patients.

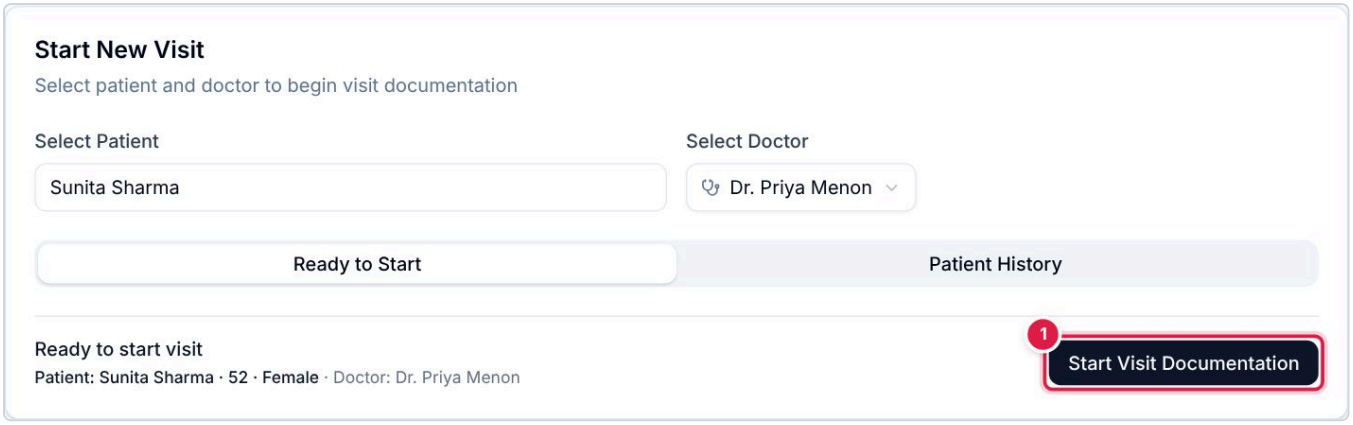

Figure 6.3. Patient and doctor chosen. Click Start Visit Documentation.

> **TIP**
> If you have not chosen a doctor, the Ready to Start tab says *Please select a doctor to start the visit*.

6.3 Check the patient's history before you start

WHO USES THIS Doctors and nurses

After choosing a patient, click the **Patient History** tab next to Ready to Start. It lists the patient's earlier visits and appointments, newest first. The newest is highlighted and labelled **Most recent record**.

Each card shows the date, the doctor, the visit status, the chief complaint and the diagnosis, and counts of photos and prescription items. Click **Show details** to see everything recorded, and **Full details** or **Compact view** to switch between the full record and a short summary. **Resume session** opens that visit for editing. **View Prescription** (inside the details) shows the medicines given at that visit, with a **Print** button. **Refresh** reloads the list.

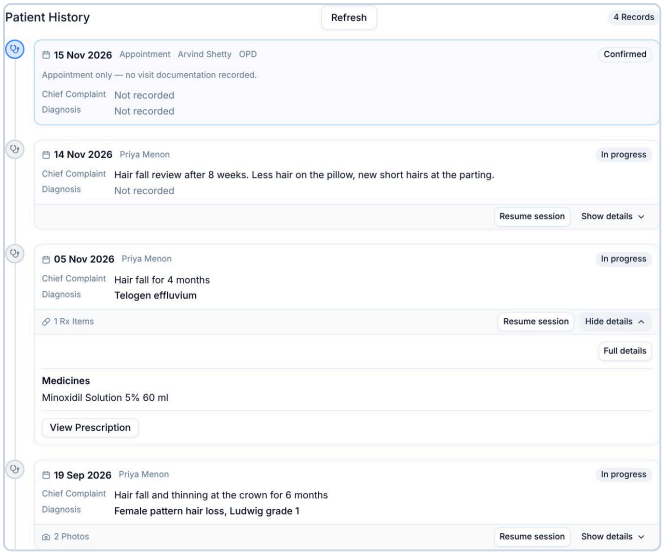

Figure 6.4. The Patient History tab on the start screen, with the most recent visit opened.

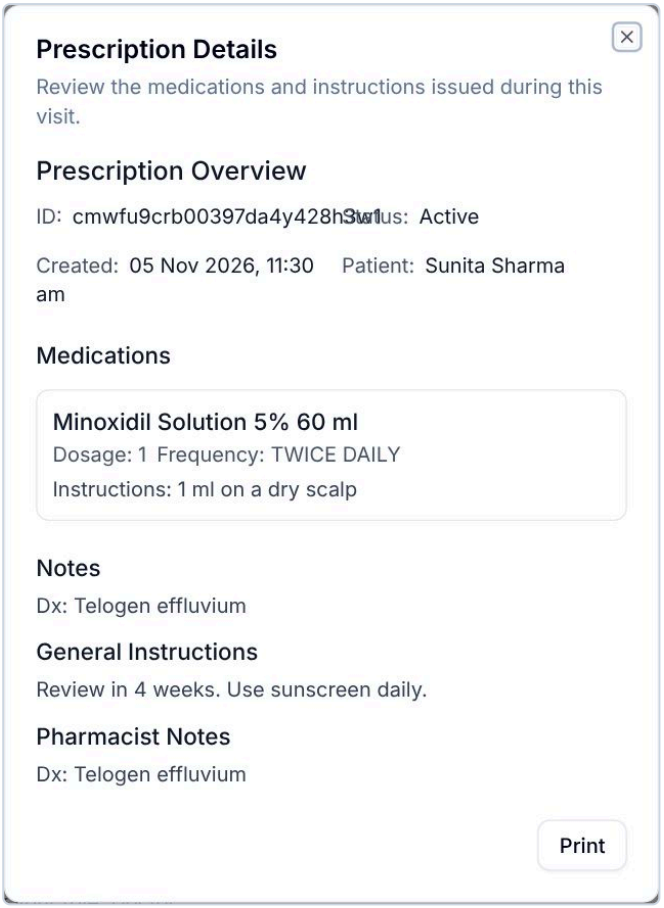

Figure 6.5. View Prescription shows what was prescribed at an earlier visit.

ON THE SCREEN	WHAT IT MEANS
DRAFT / IN PROGRESS / COMPLETED	The visit's status. Draft means it has not been saved yet. In progress means it is saved but the doctor has not completed it.
Appointment	A card labelled Appointment is a booking with no visit documentation yet.
Photos / Rx Items	How many photos and prescription items the visit has.

6.4 Open a visit from an appointment

WHO USES THIS Doctors

When the patient has an appointment, start the visit from the appointment instead: click **Start Visit** on the appointment in the calendar (see the Appointments chapter). The visit opens with the patient, doctor and appointment already filled in.

A visit opened this way shows a blue **From Appointment** badge next to the page title and **Linked to Appointment** in the visit header. The line under the title adds the appointment's time slot and type. A **Back to Calendar** button returns to the calendar.

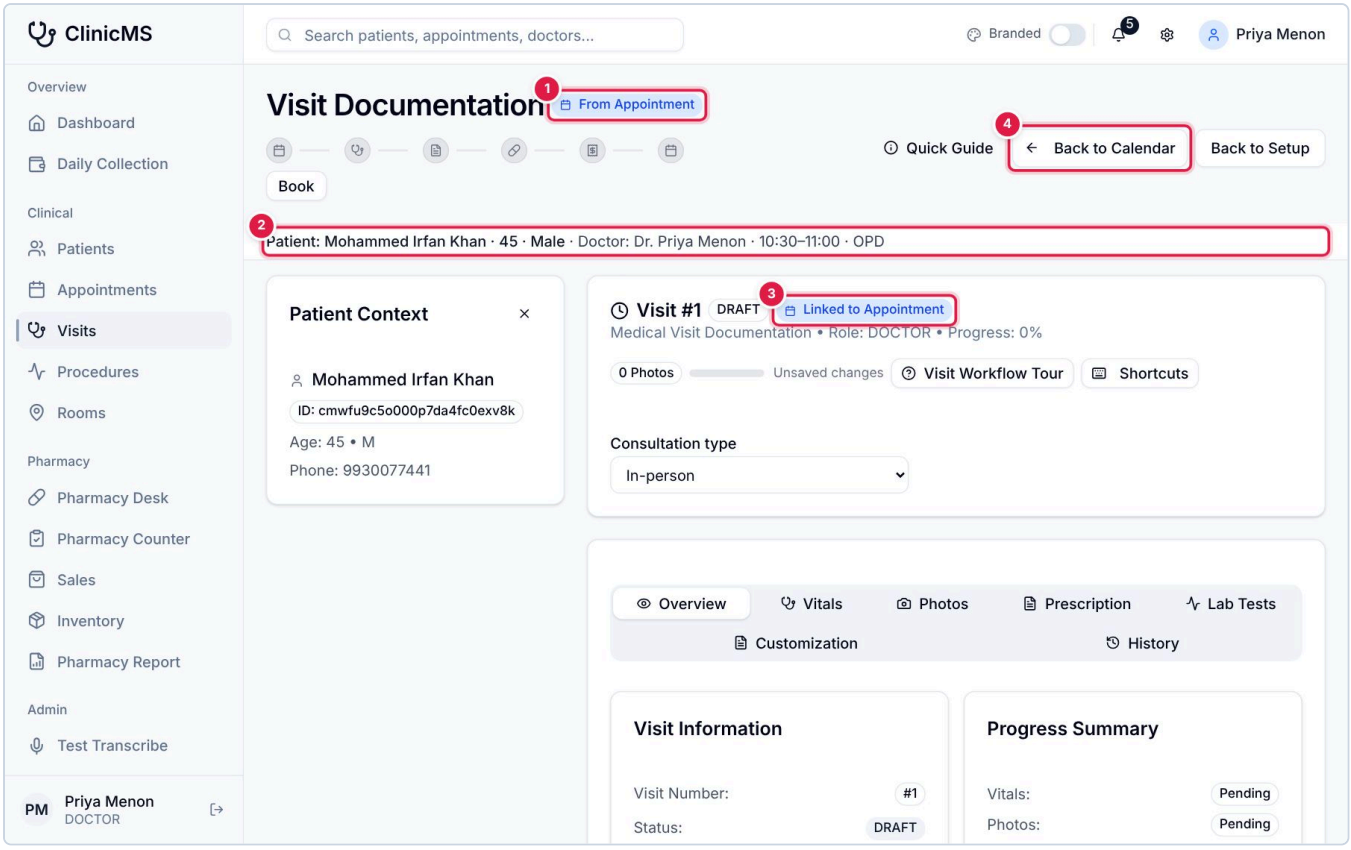

Figure 6.6. A visit opened from a checked-in appointment.

ON THE SCREEN	WHAT IT MEANS
1. From Appointment	This visit belongs to an appointment.
2. Patient line	Patient name, age and sex, the doctor, the appointment time and type. It stays at the top while you scroll.
3. Linked to Appointment	Saving this visit records it against the appointment.
4. Back to Calendar	Returns to the page you came from.

6.5 The parts of the visit form

WHO USES THIS Doctors and nurses

Every visit, new or resumed, opens on the same form. The line at the top shows who the visit is for. The small row of coloured steps under the title tracks the patient's progress (start, document, prescribe and so on) with **Continue**, **View** and **Bill** shortcuts. **Back to Setup** returns to the start screen.

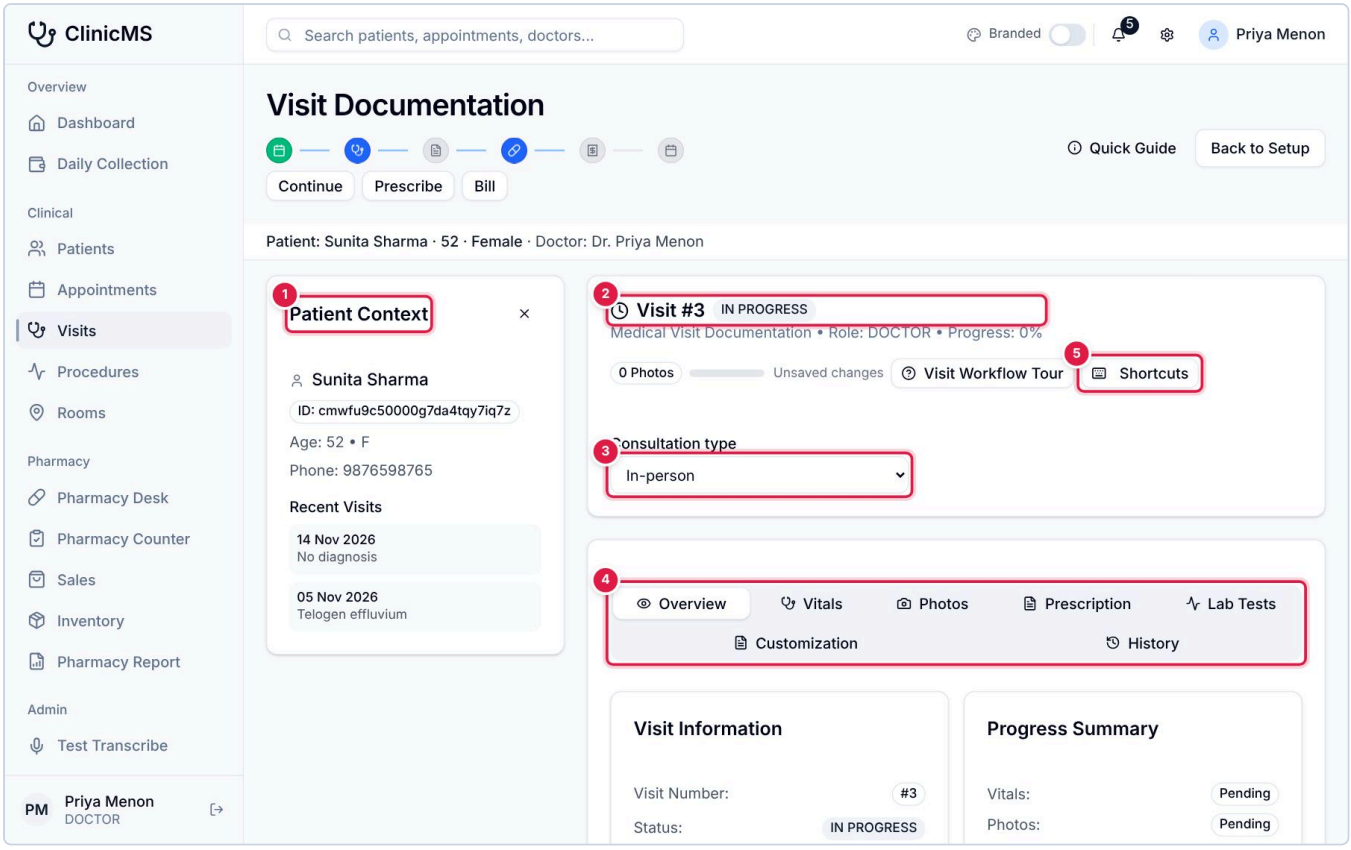

Figure 6.7. A visit being documented. The tabs across the middle hold each part of the record.

ON THE SCREEN	WHAT IT MEANS
1. Patient Context	Name, patient ID, age, sex and phone, with red **ALLERGIES** and blue **Medical History** boxes when recorded, and the two most recent visits with their diagnoses. Click the **X** to hide it, and **Show Patient Context** to bring it back.
2. Visit header	The visit number for this patient, the status (IN PROGRESS or COMPLETED), your role, the progress percentage, the photo count and the save status.
3. Consultation type	**In-person** or **Tele-video**. See the next section.
4. Tabs	Overview, Vitals, Photos, Prescription, Lab Tests, Customization and History. Nurses see fewer tabs. A green dot on a tab means that part is complete.
5. Shortcuts	Lists the keyboard shortcuts. **Visit Workflow Tour** next to it walks you through the form.

The **Overview** tab sums up the visit. **Visit Information** shows the visit number, status and who is recording. **Progress Summary** marks each part Complete or Pending and shows the overall progress. **Quick Actions** jump to **Record Vitals** or **Capture Photos** for staff who do those first.

6.6 Tele-video consultations

WHO USES THIS Doctors

If you see the patient by video, change **Consultation type** to **Tele-video** before saving. A box appears: tick **Patient consented to tele-video consultation** once the patient has agreed. The consent is recorded with your name and the time of saving.

Until consent is ticked, the visit cannot be saved and automatic saving pauses. The prescription of a tele-video visit carries a tele-video label and disclaimer (see the Prescriptions chapter).

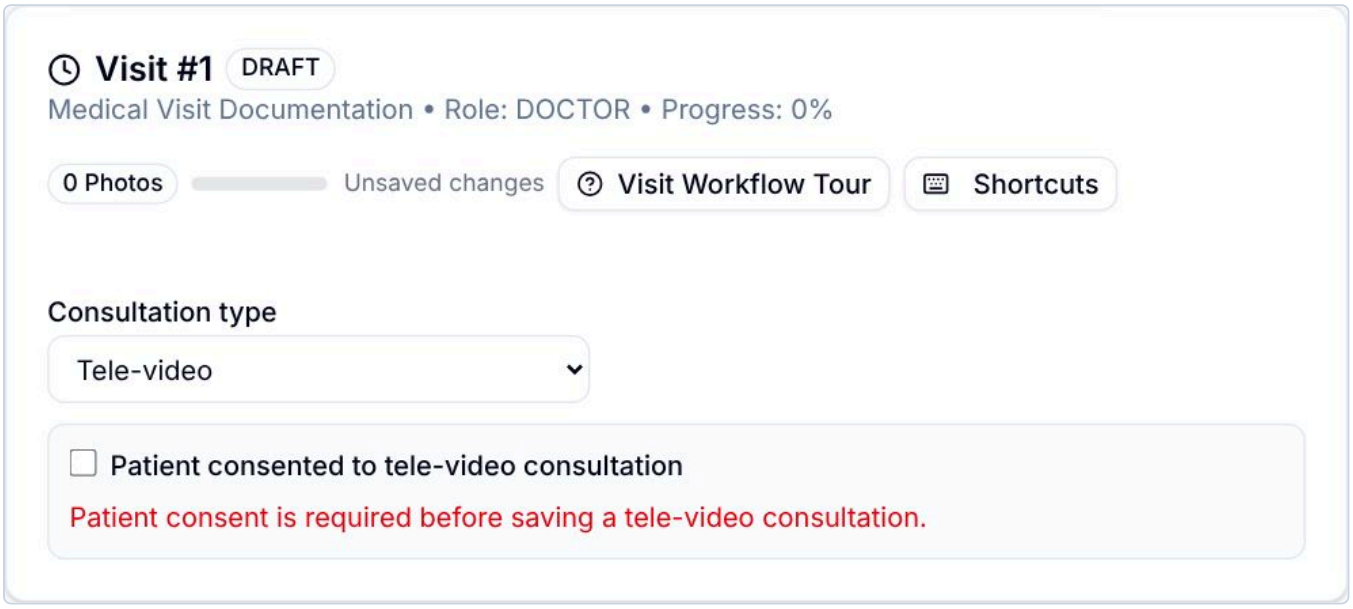

Figure 6.8. Tele-video chosen, waiting for the consent tick.

6.7 Record vitals

WHO USES THIS Doctors and nurses

Nurses usually take vitals before the patient goes in to the doctor. The values are shared with the vitals on the Prescription tab and print on the prescription.

1. Click the **Vitals** tab.
2. Type the readings. **BMI** fills itself in from height and weight.
3. Click **Mark Vitals Complete**. The visit is saved and the Vitals tab gets a green dot.

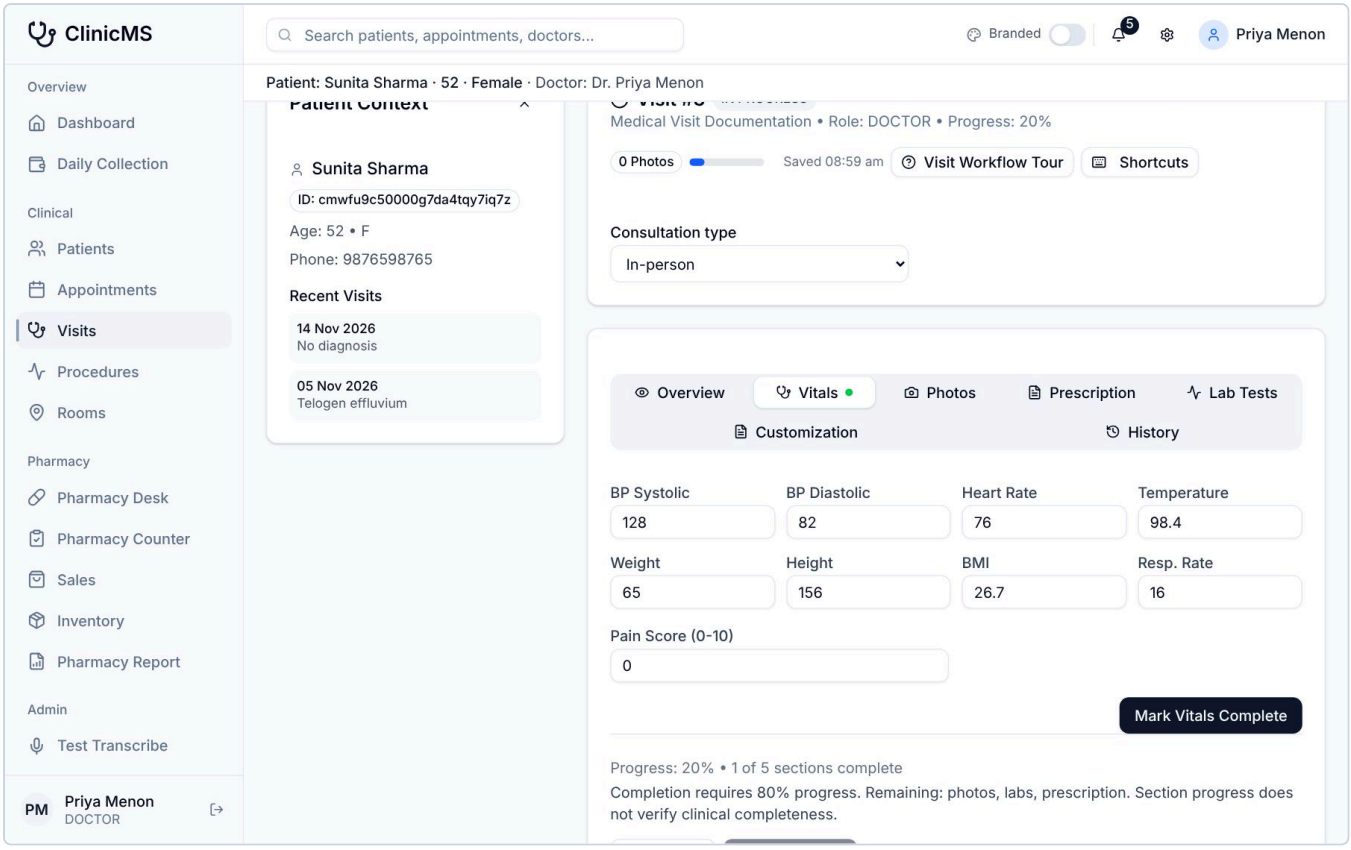

Figure 6.9. Vitals for a review visit, saved.

ON THE SCREEN	WHAT IT MEANS
BP Systolic / Diastolic	Blood pressure in mmHg.
Heart Rate	Beats per minute.
Temperature	In °F.
Weight / Height	In kg and cm.
Resp. Rate	Breaths per minute.
Pain Score (0-10)	How much pain the patient reports.

6.8 Add photos

WHO USES THIS Doctors and nurses

Photos are the best way to show progress in skin and hair treatment. Take them in the same positions at every visit so they can be compared side by side.

Click **Upload** (or **Choose Files** on an empty visit) to pick photos from the computer. On a phone or tablet, **Camera** (or **Take Photo**) opens the camera. Files up to 25 MB are accepted.

1. Click the **Photos** tab.
2. Click **Upload** and choose one or more photos.

3. In **Tag photo positions**, choose the position of each photo: Front, Left, Right, Back, Close-up or Other. **Infer positions** fills them in the usual order. **Grid** shows all photos at once. **Single** shows one large photo at a time with **Prev** and **Next**.
4. Click **Upload**. The button counts the batches as they go. A message confirms *Photos uploaded*.

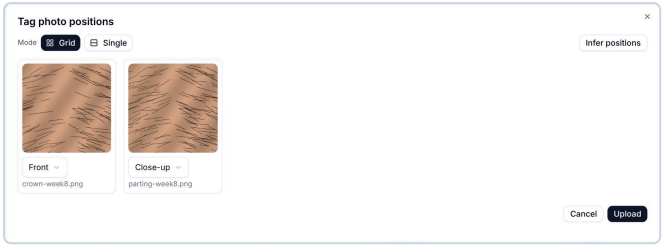

Figure 6.10. Tag photo positions before uploading.

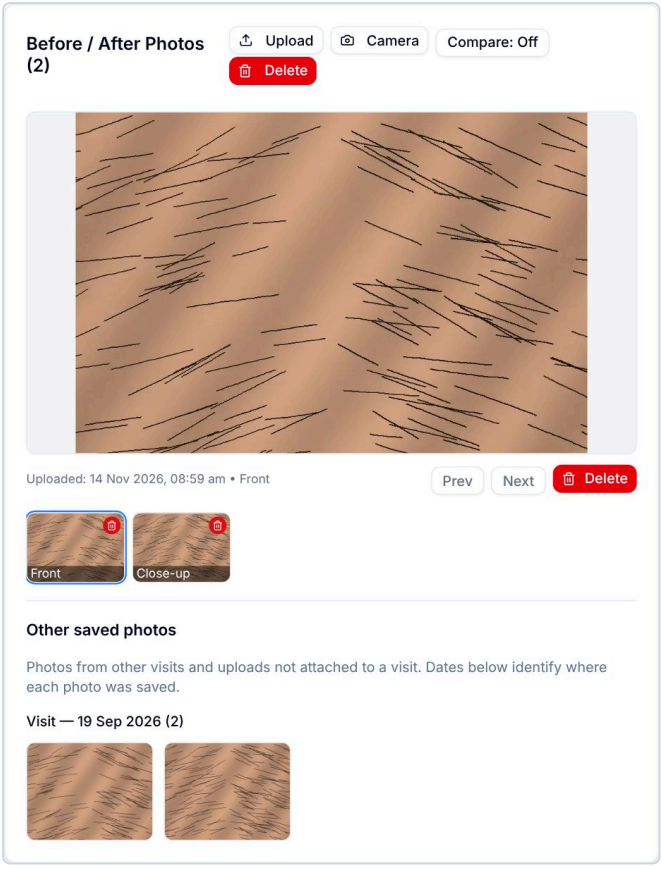

Figure 6.11. The visit's photos with their positions, and photos saved at other visits below.

ON THE SCREEN	WHAT IT MEANS
Large picture	The selected photo, with the upload time and position underneath. **Prev** and **Next** step through the photos.
Thumbnails	Click one to show it large. The small red bin on a thumbnail deletes that photo.
Delete	Deletes the photo shown large. Deleted photos cannot be brought back.
Other saved photos	Photos from the patient's other visits, and uploads that were never attached to a visit, grouped by date. Click one to open it full size.

> **TIP**
> If you upload photos before the visit has been saved, the app saves the visit first so the photos have somewhere to go.

6.9 Compare before and after

WHO USES THIS Doctors

Click **Compare: Off** to switch to **Compare: On**. Choose an earlier visit in **Compare against**. The earlier photo appears on the left and today's on the right, matched by position. **Prev** and **Next** move between positions that both visits have. If the positions do not match, the screen says *No positions to compare*.

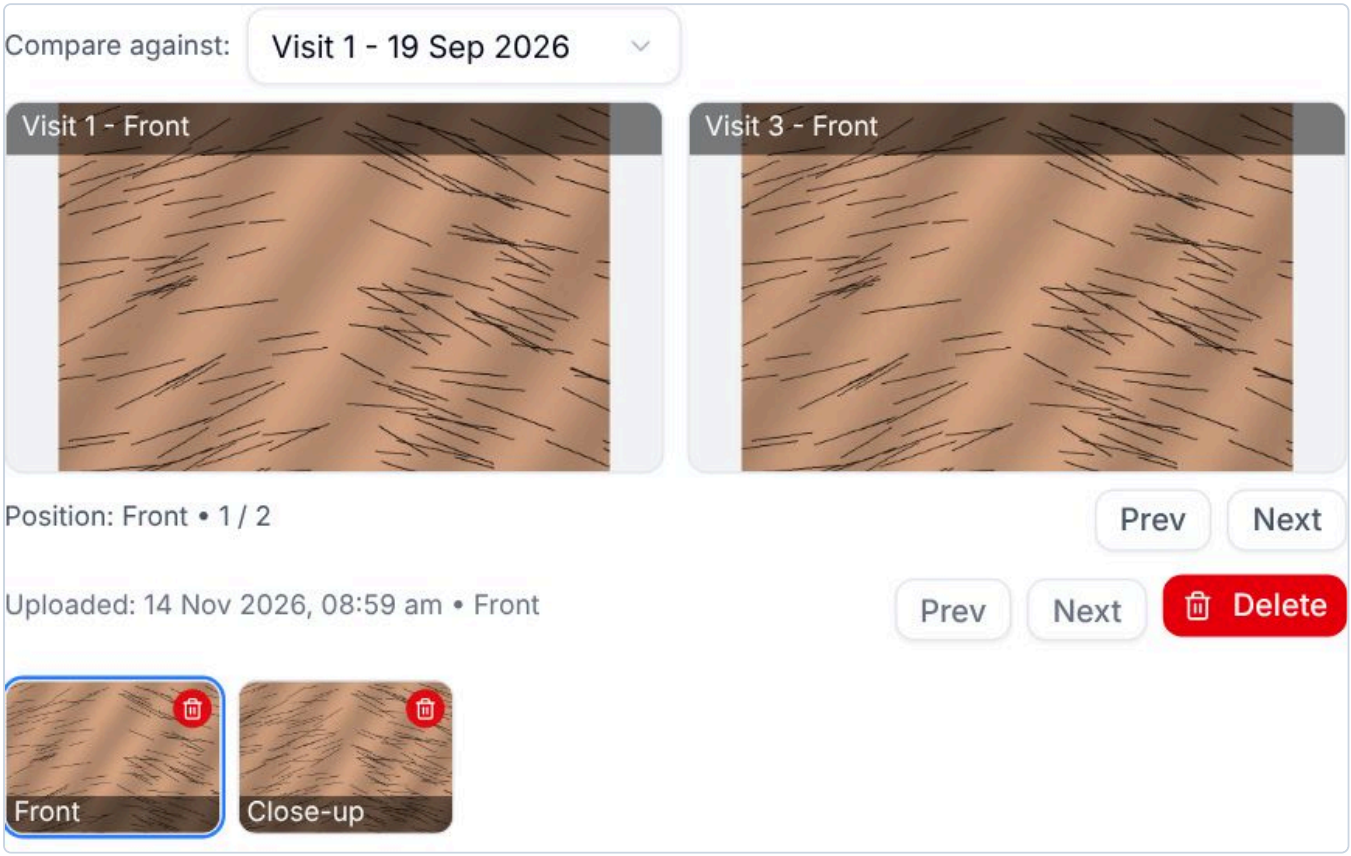

Figure 6.12. The crown photo 8 weeks ago (left) and today (right).

6.10 Enter lab results

WHO USES THIS Doctors

The **Lab Tests** tab records the results of blood and other tests the patient brings. These results stay in the visit record. Tests you want the patient to have done are ordered in the Investigations box of the Prescription tab instead.

1. Click the **Lab Tests** tab.
2. Tick each test the report includes. A box for each ticked test appears under **Enter Results**.
3. Type the **Value** and the **Unit** for each test.
4. Tick **Compare with previous visit** to see, beside each value, how much it has changed since the last visit (Δ).

5 Click **Save Labs**.

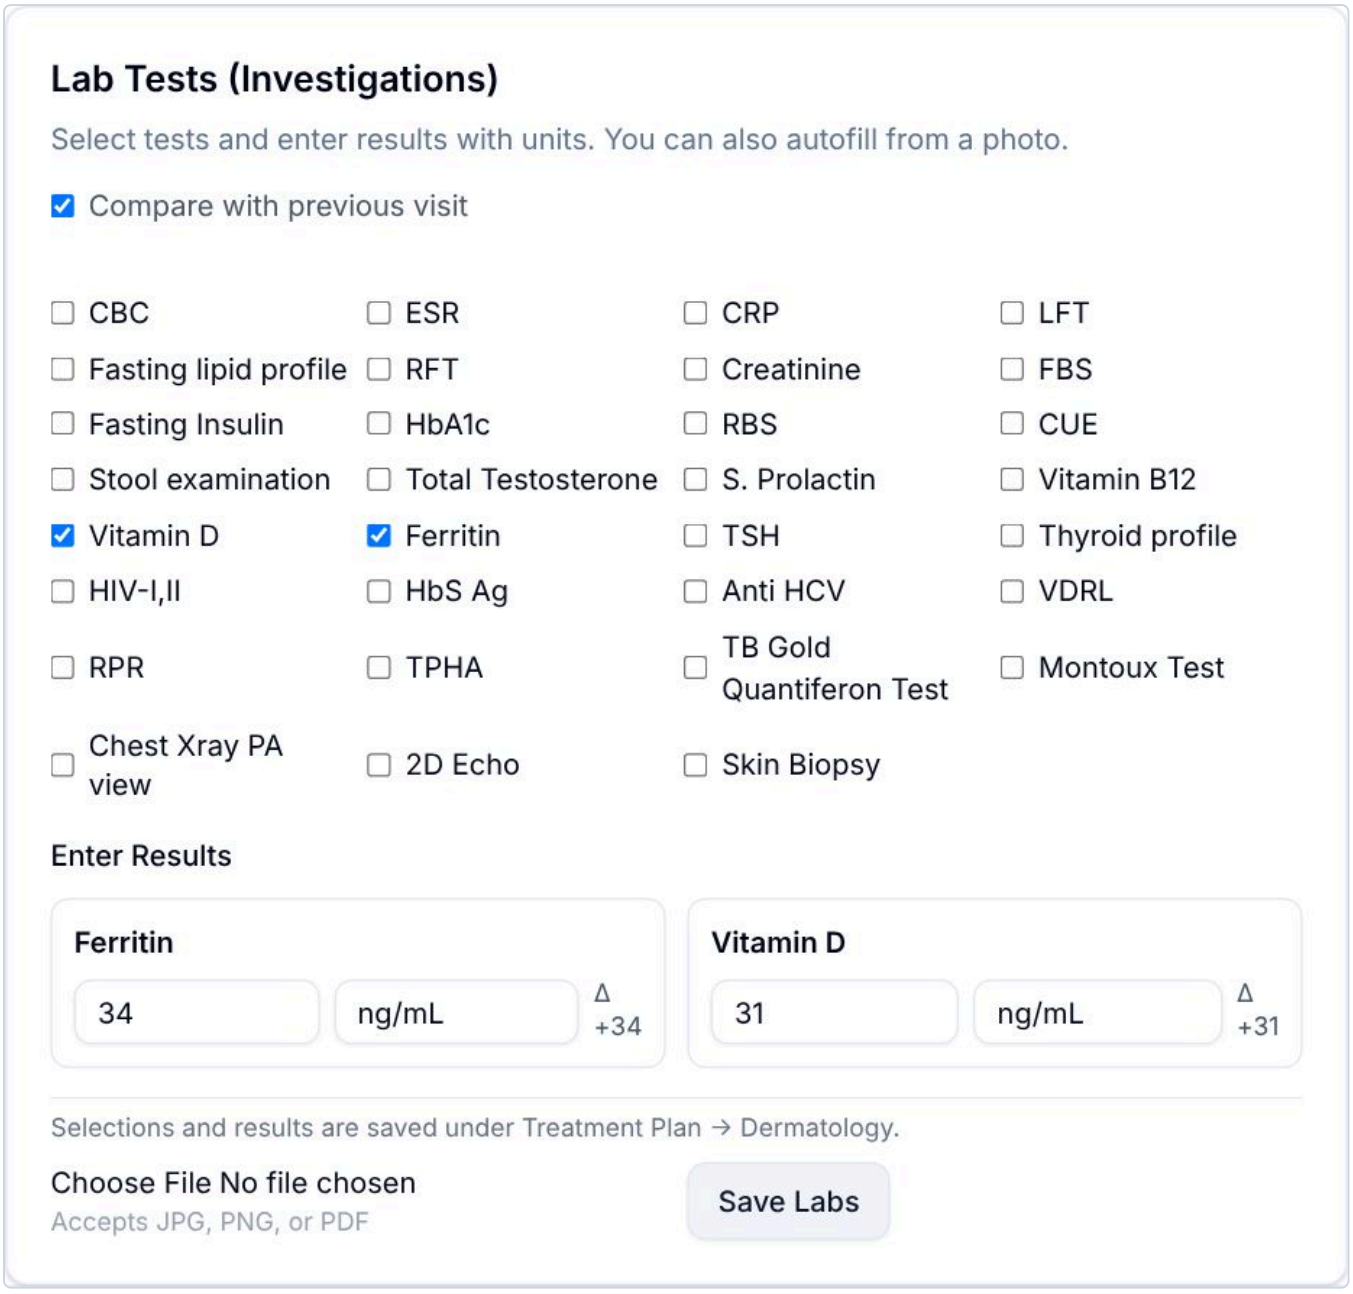

Figure 6.13. Ferritin and vitamin D results entered, with Compare with previous visit ticked.

ON THE SCREEN	WHAT IT MEANS
Autofill from a report	Under the results, choose a photo or PDF of the lab report (JPG, PNG or PDF). The app reads the report, ticks the tests it finds and fills in the values. A message says *Autofill complete*. Always check the values against the report.
Δ	The change since the previous visit. A dash means there is no earlier value to compare.

6.11 Write the prescription and clinical notes

WHO USES THIS Doctors

The **Prescription** tab holds the chief complaints, histories, examination, diagnosis, medicines, investigations and follow-up. It is described in full in the Prescriptions chapter. The **Customization** tab, which sets up the print layout, is covered there too.

6.12 See the visit history

WHO USES THIS Doctors and nurses

The **History** tab inside the form lists all the patient's visits and appointments, newest first. The dot beside each is green for completed, blue for in progress and grey otherwise. Each card works like the cards on the start screen: **Show details**, **Full details** or **Compact view**, and **Resume session** to open that visit instead of this one.

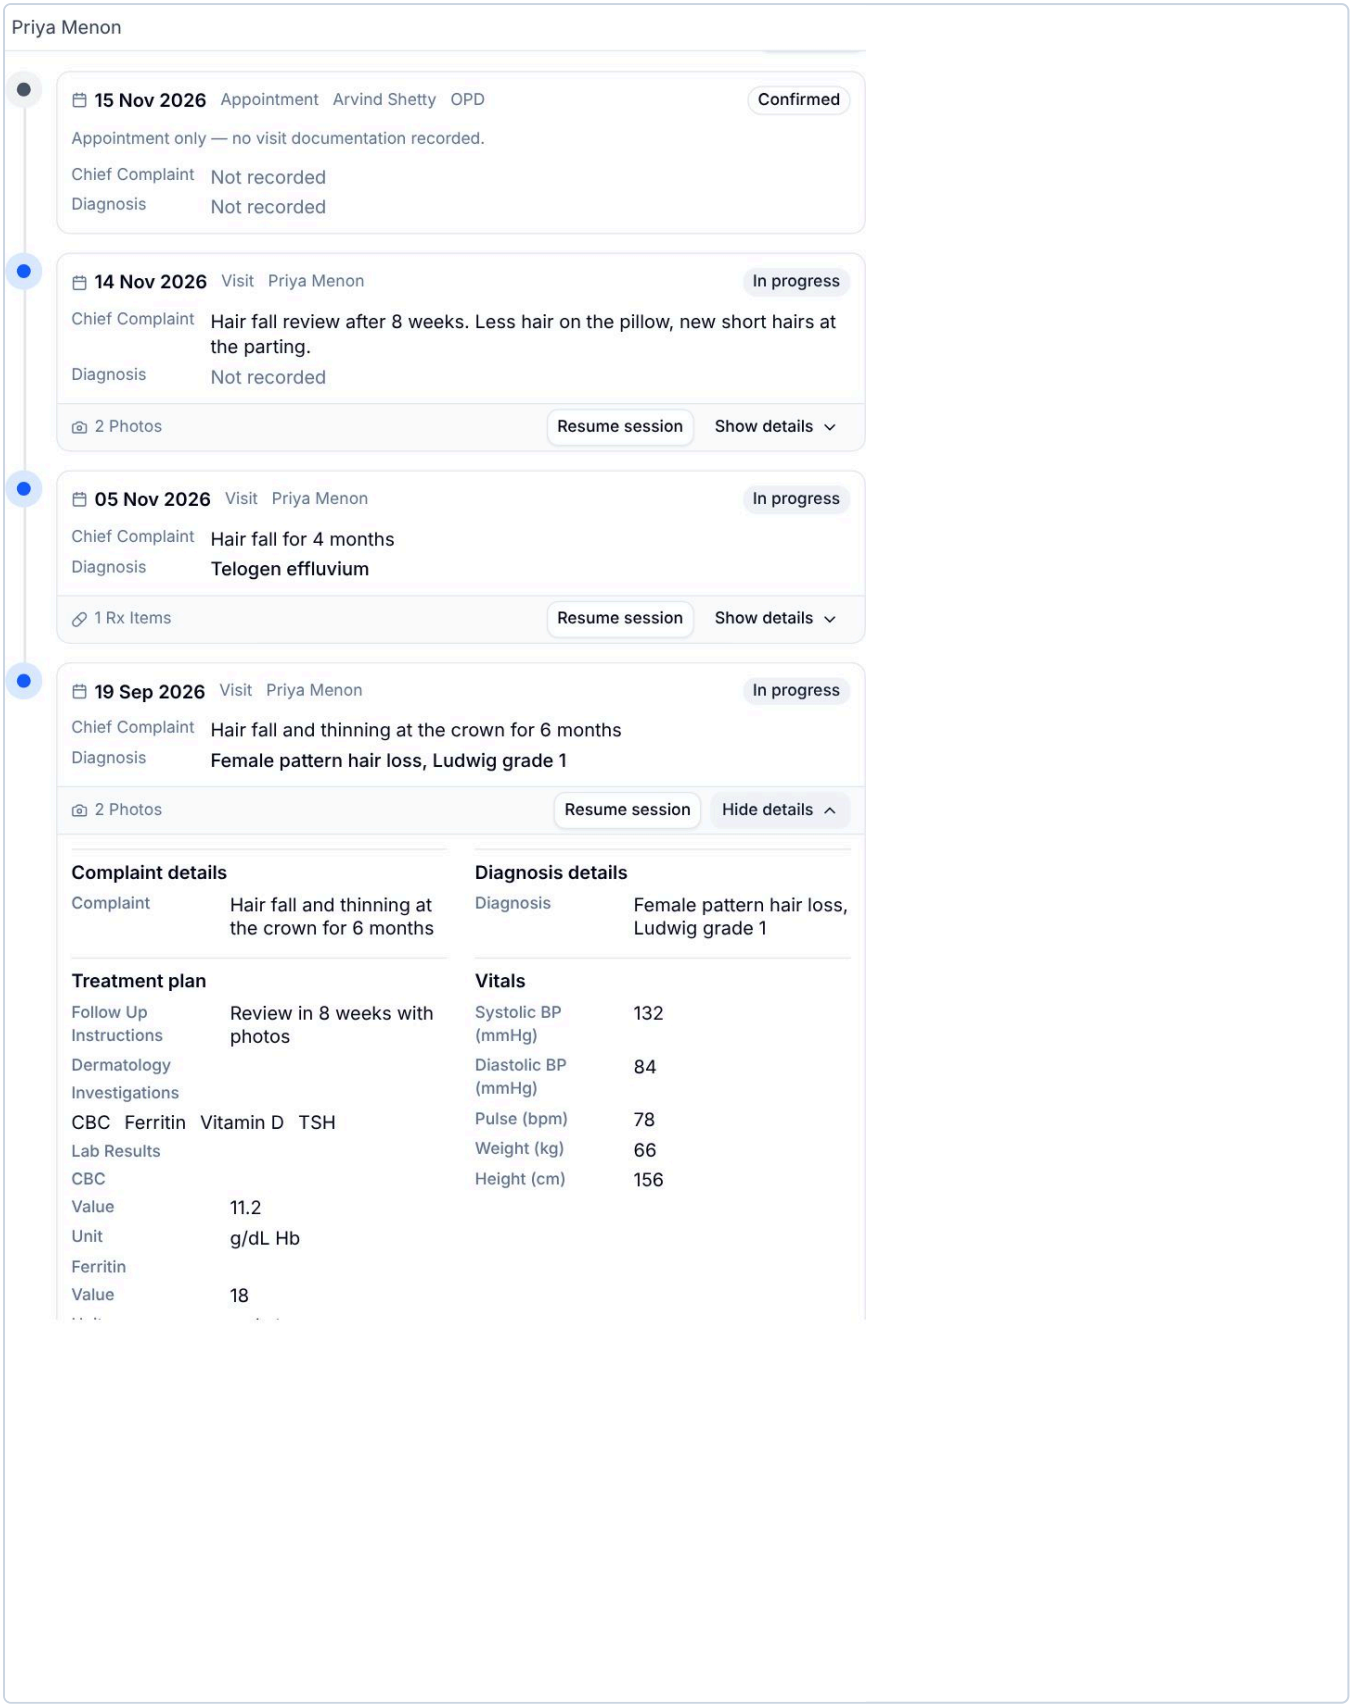

Figure 6.14. Patient Visit History inside the visit form.

6.13 Save your work

WHO USES THIS Doctors and nurses

You do not lose work if you forget to save. As you type, the form keeps a copy in the browser on this computer. If the page is closed or the computer restarts, opening the same visit again brings your entries back.

Once a visit has been saved once, the app also saves changes to the clinic's records by itself a few seconds after you stop typing. The visit header shows the save status.

Click **Save Draft** at the bottom of the form, or press Ctrl+S (Cmd+S on a Mac), to save at any time. A message confirms *Visit saved*.

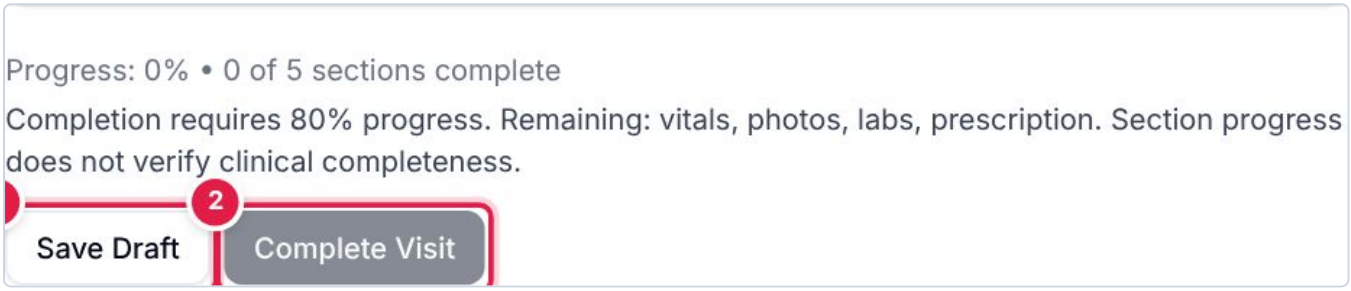

Figure 6.15. The bottom of the form: progress and the save buttons.

ON THE SCREEN	WHAT IT MEANS
Unsaved changes	You changed something that has not been saved to the clinic's records yet.
Auto-saving... / Saving...	A save is in progress.
Saved 10:42 am	Everything is saved. The time is the last save.
Save failed	The save did not go through. The app tries again shortly. Your entries are kept in the browser.
Visit changed elsewhere	Someone else saved this visit while you had it open. An amber box explains that your draft is kept and automatic saving has paused. Keep working and save, or click **Discard draft and reload saved visit** to throw your changes away and load the saved version.
Draft changed in another tab	The same visit is open in another browser tab. Close one of them.

6.14 Complete the visit

WHO USES THIS Doctors

Completing a visit marks the documentation as finished. The status changes from IN PROGRESS to COMPLETED, and if a review date is set on the Prescription tab it becomes the patient's follow-up date. Only doctors can complete a visit.

Complete Visit becomes available at 80% progress. In practice that means all four of these parts are marked complete: Vitals (click **Mark Vitals Complete**), Photos (upload at least one photo), Lab Tests (click **Save Labs**) and Prescription (open the print preview or save the prescription). Below the progress, the form lists the parts still remaining. The progress only counts these steps. It does not check that the notes are clinically complete.

1. Check the progress line at the bottom of the form.
2. Click **Complete Visit**, or press Ctrl+Shift+S. A message confirms *Visit completed*.

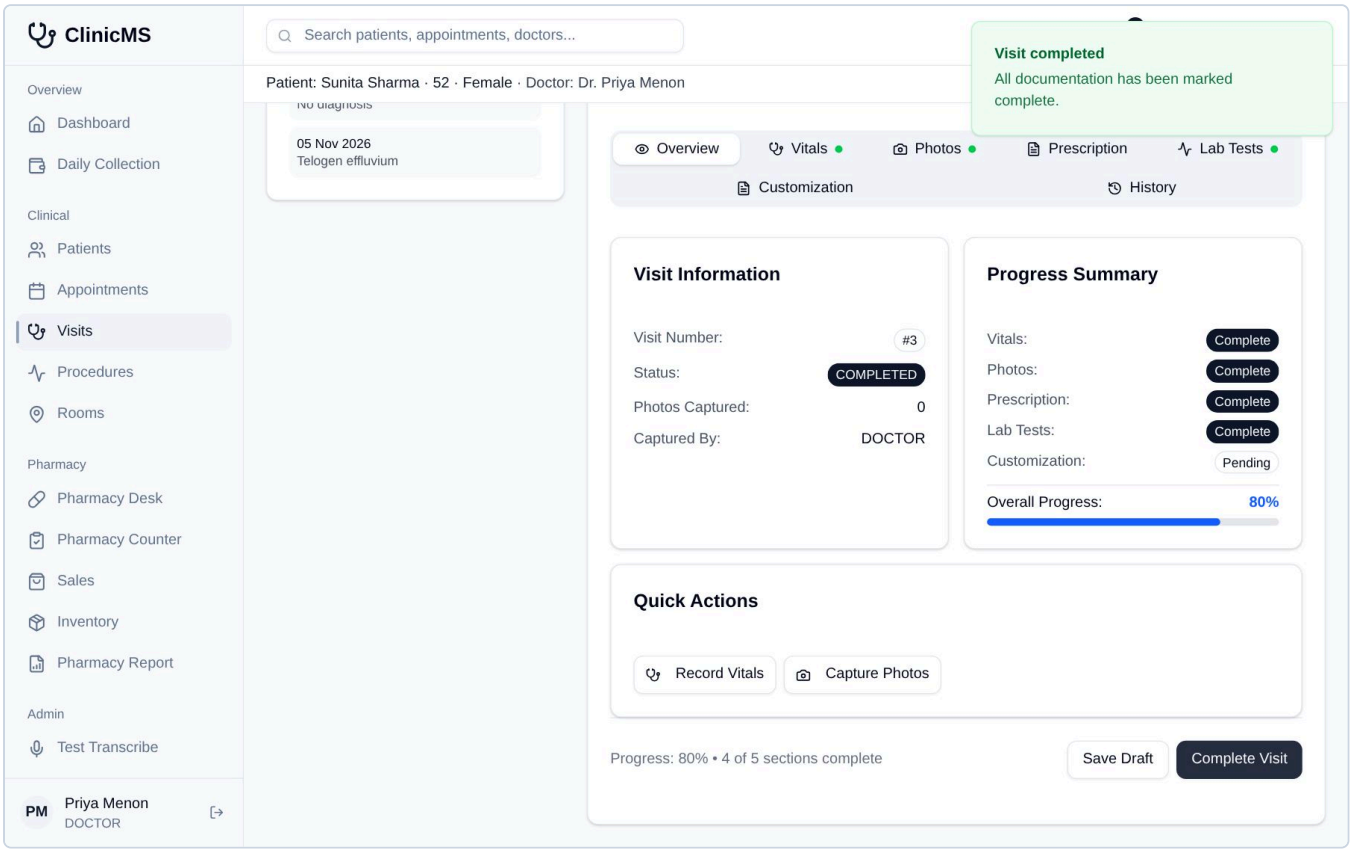

Figure 6.16. A completed visit.

> **TAKE CARE**
> If you click Complete Visit too early, the app says *More details needed to complete* and lists what to fill in. A nurse who tries sees *Doctor access required*.

6.15 Resume a visit later

WHO USES THIS Doctors and nurses

To continue a visit, click **Resume session** on its card in the patient's history, or use the link from the patient's page or the Dashboard. The visit opens with everything saved so far. Any entries kept in the browser on this computer are brought back too.

6.16 What a nurse sees

WHO USES THIS Nurses

Nurses record the parts of the visit that happen before the doctor: vitals, photos and complaints. Their role card is green and reads *Can record vitals, capture photos, complaints, and basic assessments*. In the form, a nurse sees only the **Overview**, **Vitals**, **Photos** and **History** tabs. There is no Prescription, Lab Tests or Customization tab and no Complete Visit button. Progress for a nurse is counted out of three parts instead of five.

A nurse saves with **Save Draft**. The doctor then opens the same visit, sees the vitals and photos already there, and completes it.

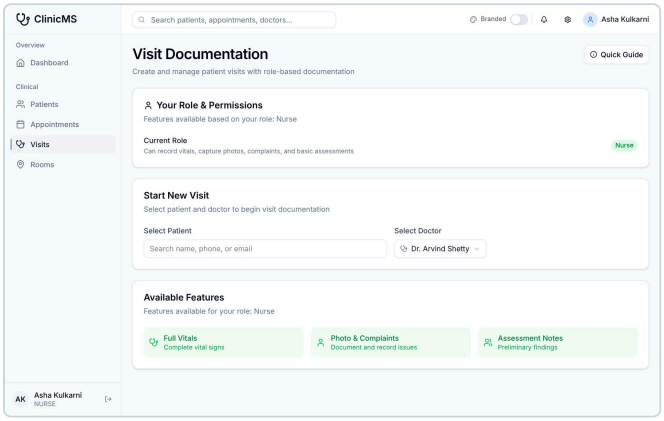

Figure 6.17. The start screen for a nurse.

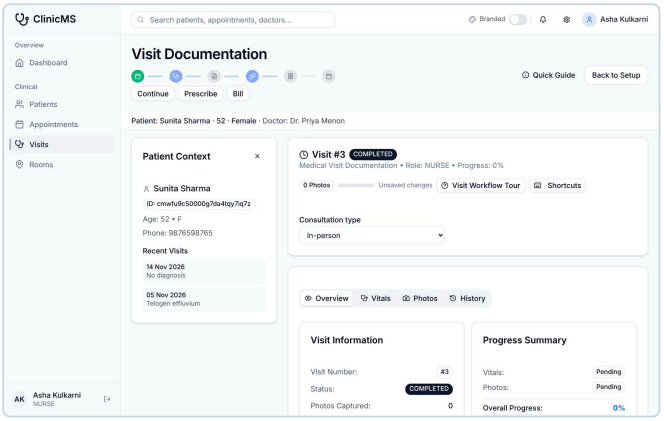

Figure 6.18. The visit form for a nurse: no Prescription, Lab Tests or Customization tab.

6.17 Quick Guide and shortcuts

WHO USES THIS Everyone who uses the page

Quick Guide at the top of the page summarises how to start and document a visit. Inside the form, **Shortcuts** lists the keyboard shortcuts.

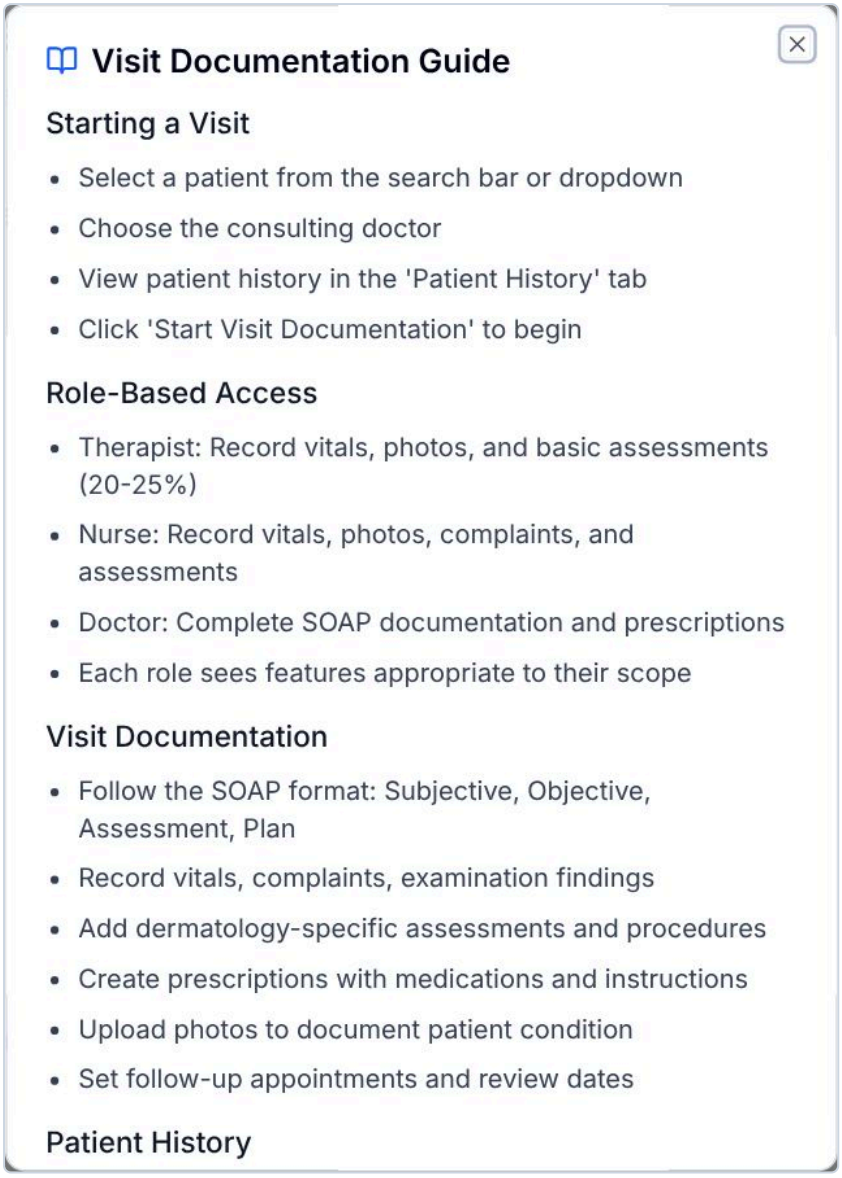

Figure 6.19. The Visit Documentation Guide.

ON THE SCREEN	WHAT IT MEANS
Ctrl/Cmd + S	Save Draft.
Ctrl/Cmd + Shift + S	Complete Visit.
↑ / ↓ and Enter	Move through and choose from the patient search list.
Esc	Close menus.

CHAPTER 7

Prescriptions

Doctors write the prescription inside the visit, on the **Prescription** tab. The same screen holds the clinical notes that go on the printout: complaints, histories, diagnosis, medicines, investigations, procedures and follow-up. This chapter follows one real example, an acne patient, from the first box to the printed and shared prescription. Only doctors, admins and owners see the Prescription tab.

7.1 Open the Prescription tab

WHO USES THIS Doctors

Start or open the visit as described in the Visits chapter, then click the **Prescription** tab. The tab is a long page of boxes, from top to bottom in the order you usually work: vitals, complaints, diagnosis, history, examination, treatment, procedures, investigations, then language, follow-up and review date, with the print and save buttons at the very bottom.

A green dot on the Prescription tab means at least four of the key parts are filled in (complaints, diagnosis, history or examination, vitals, medicines). A box with content turns green and shows **Has Data** and **Auto-included in preview**, which means it will be printed.

Click the **X** at the top of the Patient Context panel to hide it and give the prescription more room. **Show Patient Context** brings it back.

Everything you type is kept as you go. Once the visit has been saved once, the app saves your changes in the background a few seconds after you stop typing. The visit header shows *Auto-saving…*, then *Saved* and the time.

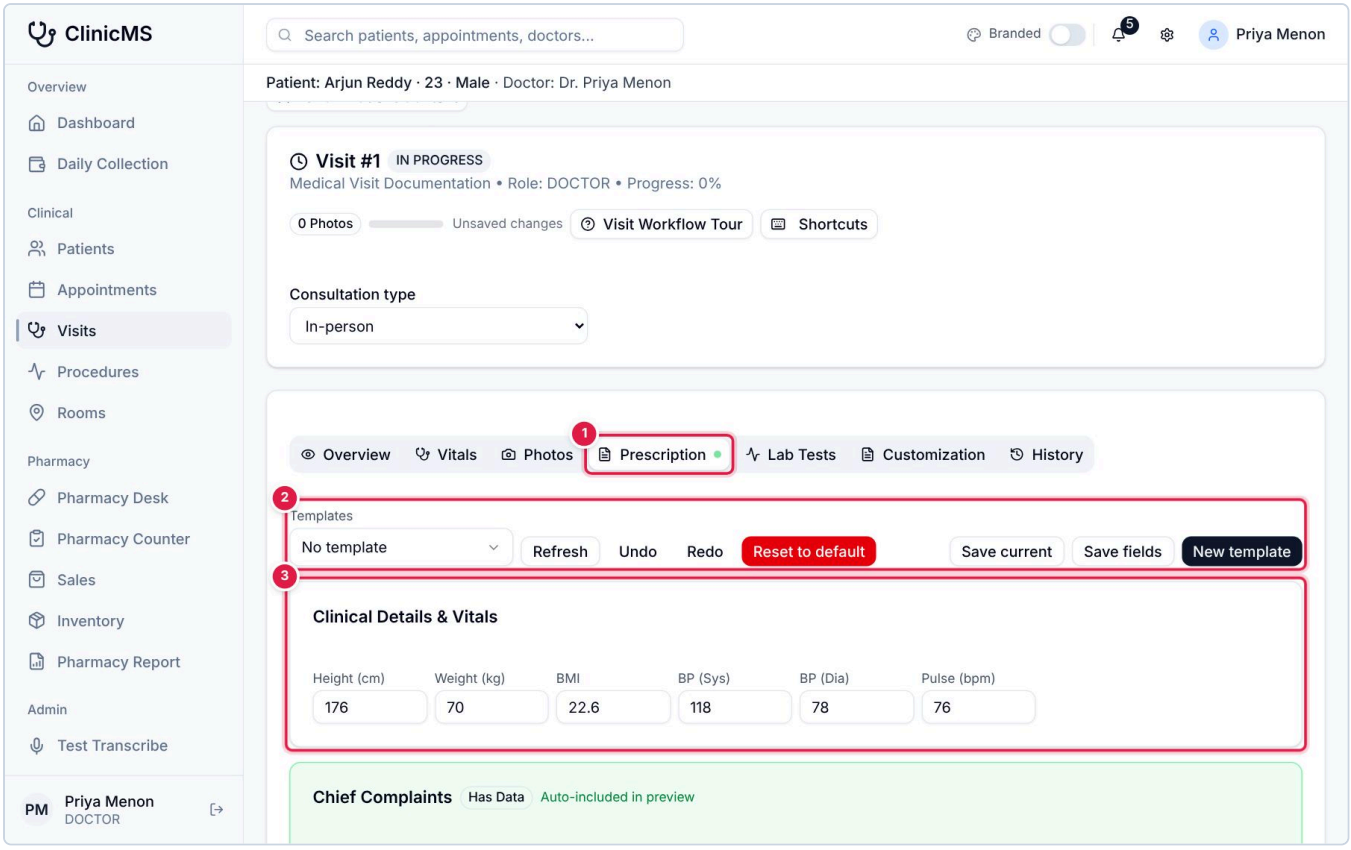

Figure 7.1. The top of the Prescription tab: the templates bar and Clinical Details & Vitals.

ON THE SCREEN	WHAT IT MEANS
1. Prescription tab	Where the prescription is written.
2. Templates bar	Apply, save and manage templates. See *Use templates* below.
3. Clinical Details & Vitals	Height, weight, BP and pulse. BMI works itself out. These are the same vitals as on the Vitals tab, and they print in the patient line of the prescription.

7.2 Record the chief complaints

WHO USES THIS Doctors

Write what the patient came for, in their words if possible. As you type, the box offers complaints you have used before. Click one to use it.

The microphone button on the right records the conversation and adds the patient's part of it to the box (see *Dictate with the microphone* below). Below the box, click the **Skin Concerns** that apply. Selected ones turn dark.

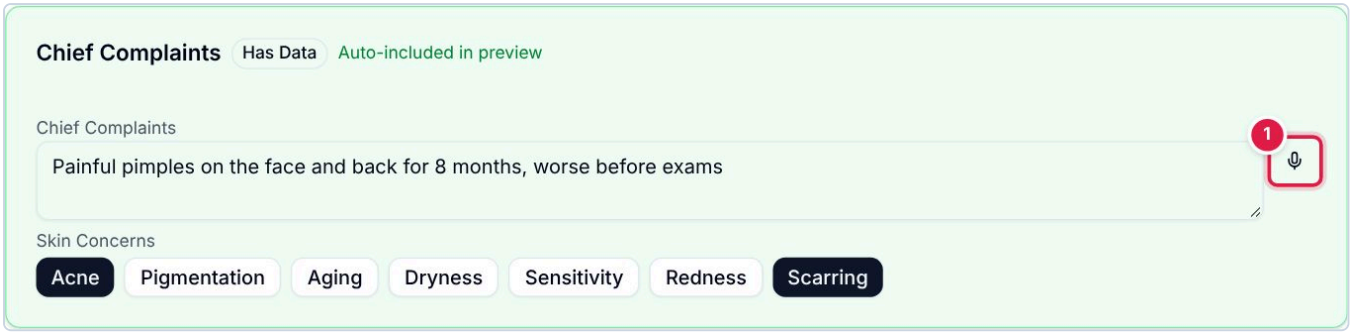

Figure 7.2. Chief Complaints with Acne and Scarring selected as skin concerns.

> **TIP**
> Skin concerns help you search and report on patients later. They do not print.

7.3 Enter the diagnosis

WHO USES THIS Doctors

Type the diagnosis in plain words, for example *Acne vulgaris, grade 3*. Earlier diagnoses are offered as you type. The diagnosis drives the treatment suggestions further down.

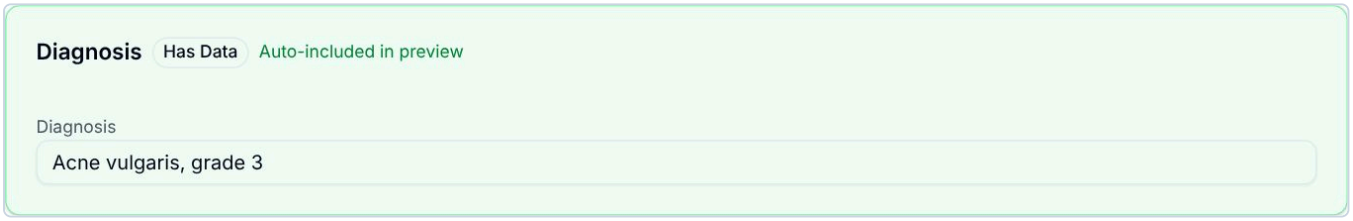

Figure 7.3. The Diagnosis box.

> **TAKE CARE**
> If the Diagnosis box is empty, the printed prescription has no diagnosis line at all. Fill it in before you print.

7.4 Record the patient's history

WHO USES THIS Doctors

The **Patient History** box holds the background that matters for treatment. Everything here prints under *History*.

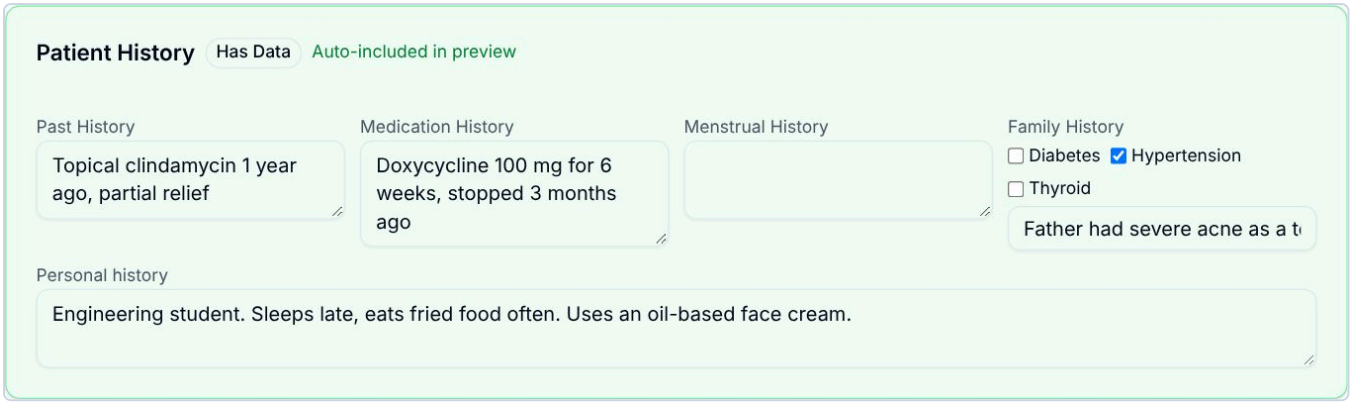

Figure 7.4. Past, medication, menstrual, family and personal history.

ON THE SCREEN	WHAT IT MEANS
Past History	Earlier skin problems and treatments, for example a course of clindamycin a year ago.
Medication History	Medicines the patient takes now or took recently.
Menstrual History	For women: cycle regularity, PCOS symptoms and similar. Leave empty for men.
Family History	Tick **Diabetes**, **Hypertension** or **Thyroid**, and type anything else in **Others**.
Personal history	Diet, sleep, habits, occupation and the cosmetics or products the patient uses.

7.5 Record the examination (On Examination)

WHO USES THIS Doctors

The **On Examination** box records the dermatology examination. Click its title to fold it away or open it again. The app remembers your choice. When it is folded and has content, the title shows **filled**.

Examination findings are for the doctor's record only. They are saved with the visit and shown in the patient's history, but they do not print on the prescription.

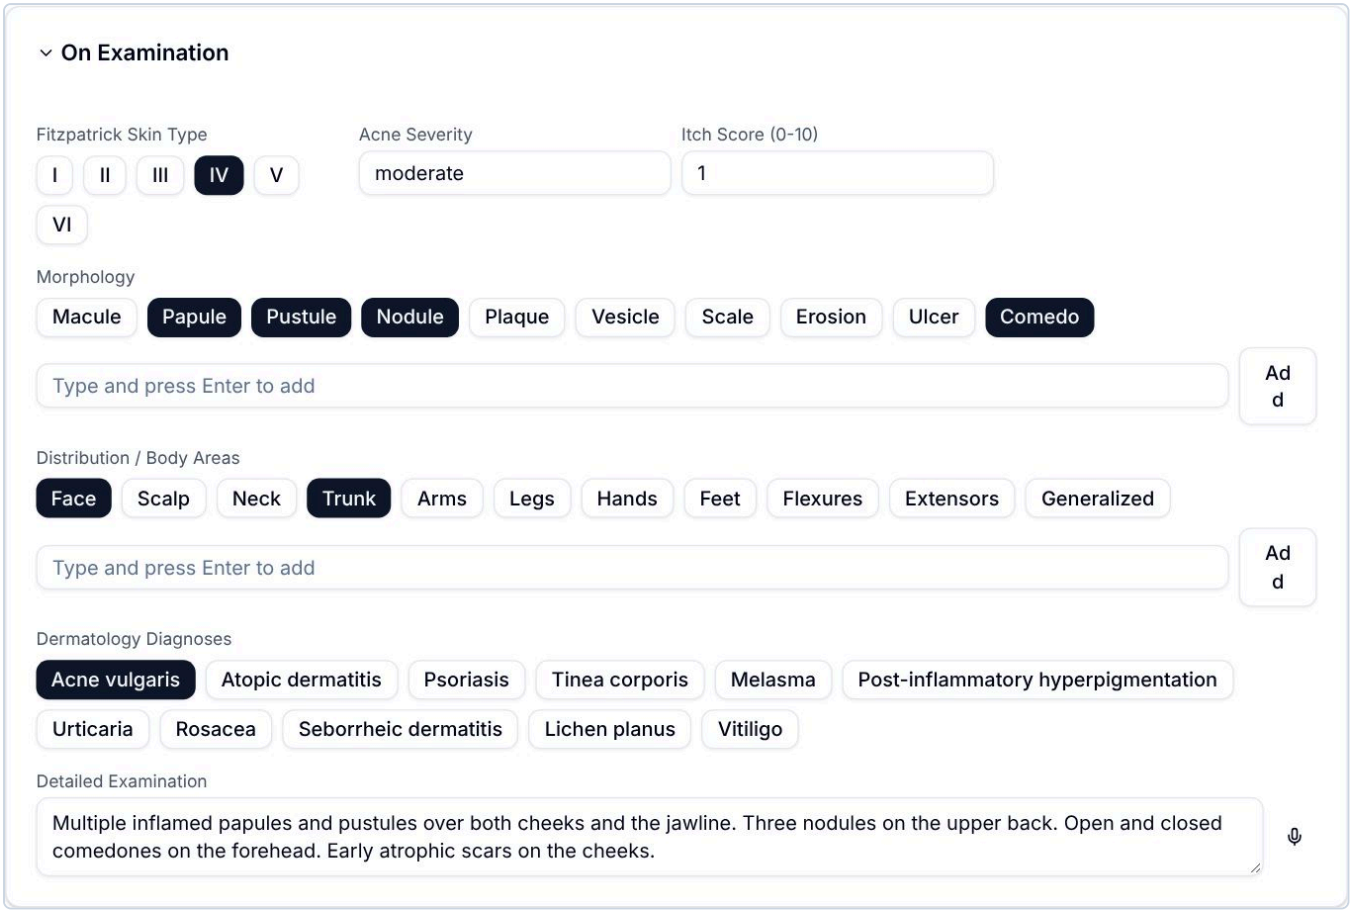

Figure 7.5. On Examination for an acne patient: skin type IV, papules, pustules, nodules and comedones on the face and trunk.

ON THE SCREEN	WHAT IT MEANS
Fitzpatrick Skin Type	Click I to VI. Click the selected type again to clear it.
Acne Severity	Type mild, moderate or severe.
Itch Score (0-10)	How itchy the patient says the skin is, 0 for none and 10 for the worst.
Morphology	Click every lesion type you see: Macule, Papule, Pustule, Nodule, Plaque, Vesicle, Scale, Erosion, Ulcer, Comedo. To add your own, type it in **Type and press Enter to add** and press Enter or click **Add**. Your own entries show a small x to remove them.
Distribution / Body Areas	Where the lesions are: Face, Scalp, Neck, Trunk, Arms, Legs, Hands, Feet, Flexures, Extensors, Generalized. You can add your own the same way.
Dermatology Diagnoses	Common diagnoses to click. A clicked diagnosis is saved with the visit's diagnoses.
Detailed Examination	Free text for the full findings. The microphone button beside it adds dictated text.

7.6 Add medicines

WHO USES THIS Doctors

The **Treatment** box is the medicine list (the Rx). Each medicine is one row with five parts: the medicine, how often, when, for how long, and instructions. Rows with no medicine name are ignored when you save.

1. Click **Add Row**. A new empty row appears and the cursor goes to it.
2. Type at least two letters of the medicine in **Search medicine name...**. A list of matches opens.
3. Click the medicine, or click **Select** next to it. The row fills in.
4. Choose the **Frequency**, for example **1-0-1** for morning and night.
5. Choose **When**, for example **After Dinner** or **HS** (at bedtime).
6. Type the number in the **Duration** box and choose the unit (DAYS, WEEKS, MONTHS, YEARS).
7. Type any **Instructions**, for example *Apply only on red pimples*. Earlier instructions for the same medicine are offered as you type.
8. Press Enter in the medicine box to add the next row straight below.

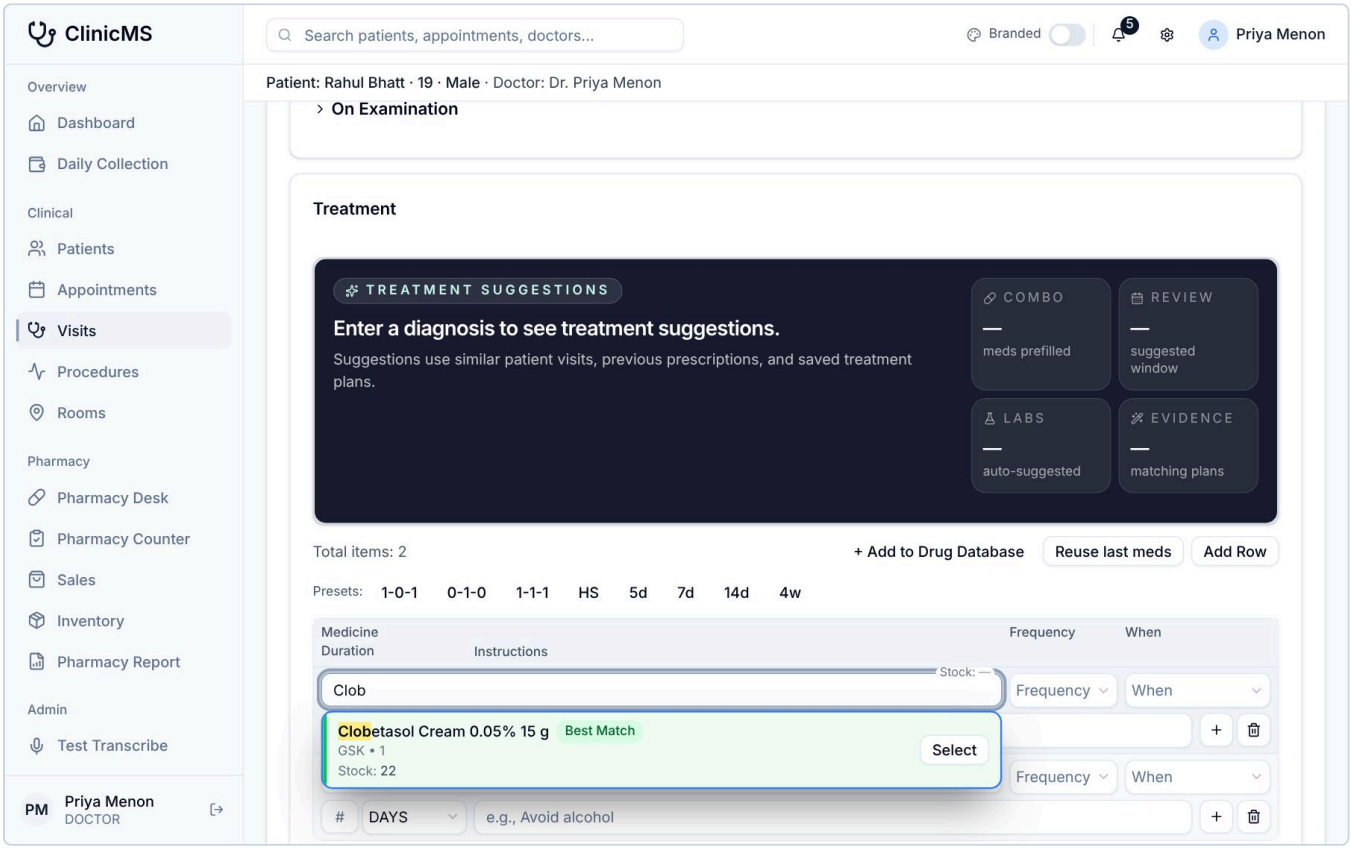

Figure 7.6. Searching for a medicine. The best match is marked in green, the next two in blue. Stock in the pharmacy shows under each name.

Figure 7.7. After choosing the medicine, its usual values are filled in. *Suggested · Accept* marks values the app suggested.

ON THE SCREEN	WHAT IT MEANS
Best Match / High Match	How closely a search result matches what you typed.
Strength missing	The medicine record has no strength. Check the pack before prescribing.
Stock	How many are in the pharmacy now. A red number means 5 or fewer are left. A dash means the medicine is not stocked or the count is still loading. Point at a row to see *Remaining stock*.
Loading usual values...	The app is looking up how this medicine is usually prescribed.
Suggested · Accept	Shown under a value the app filled in for you: from your own prescriptions in the last 12 months, from the clinic's prescriptions, or from the pharmacy's defaults. Point at it to see which. Click it to accept the value. If you change the value yourself, the hint disappears.
Suggestions unavailable	The usual values could not be loaded. Type the values, or choose the medicine again to retry.

7.7 Frequency, timing, duration and custom options

WHO USES THIS Doctors

Frequency uses the dose pattern most Indian prescriptions use: three numbers for morning, afternoon and night. **1-0-1** means one in the morning and one at night. Choosing a pattern also fills a matching **When** if it is empty.

The quick buttons above the table apply to the row you last clicked. **1-0-1**, **0-1-0**, **1-1-1** and **HS** set the frequency. **5d**, **7d**, **14d** and **4w** set the duration. **Recent meds**, when shown, lists medicines you prescribed recently. Click one to put it in the current row.

If an option you need is not in a list, choose **+ Custom...** at the bottom of the Frequency, When or Duration list. Type the new option and click **Add & Apply**. It is saved on this computer for next time.

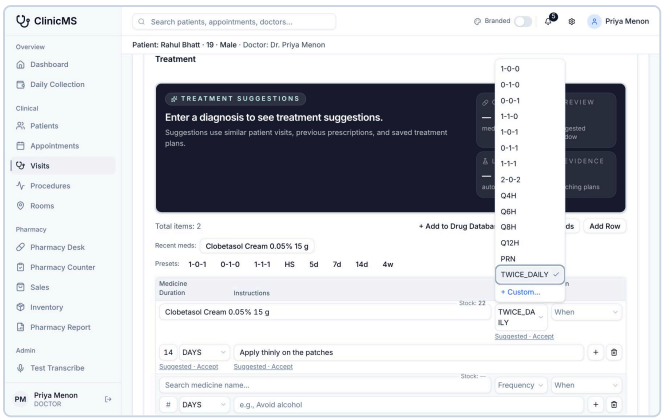

Figure 7.8. The Frequency list, with + Custom... at the bottom.

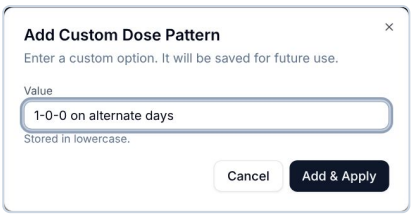

Figure 7.9. Adding a custom dose pattern.

ON THE SCREEN	WHAT IT MEANS
When	AM, PM, After Breakfast, After Lunch, After Dinner, Before Meals, QHS and HS (at bedtime), With Food, Empty Stomach. The list only offers timings that suit the chosen frequency.
Duration unit	DAYS, WEEKS, MONTHS or YEARS, plus any custom units.

7.8 Change the order, add and remove rows

WHO USES THIS Doctors

Every row has two buttons at its right end. The **+** button adds an empty row directly below that row, so you can slot a medicine in where it belongs. If the next row is already empty, the cursor moves there instead of adding another one. The bin button removes the row.

There is no drag to reorder. To move a medicine, add a row where you want it, choose the medicine there, and remove the old row.

Reuse last meds copies the medicines from the patient's previous visit into the table. **+ Add to Drug Database** opens a small form to add a medicine the search cannot find (name, manufacturer, price and pack size). **Save & Add** saves it for the whole clinic and puts it in the prescription.

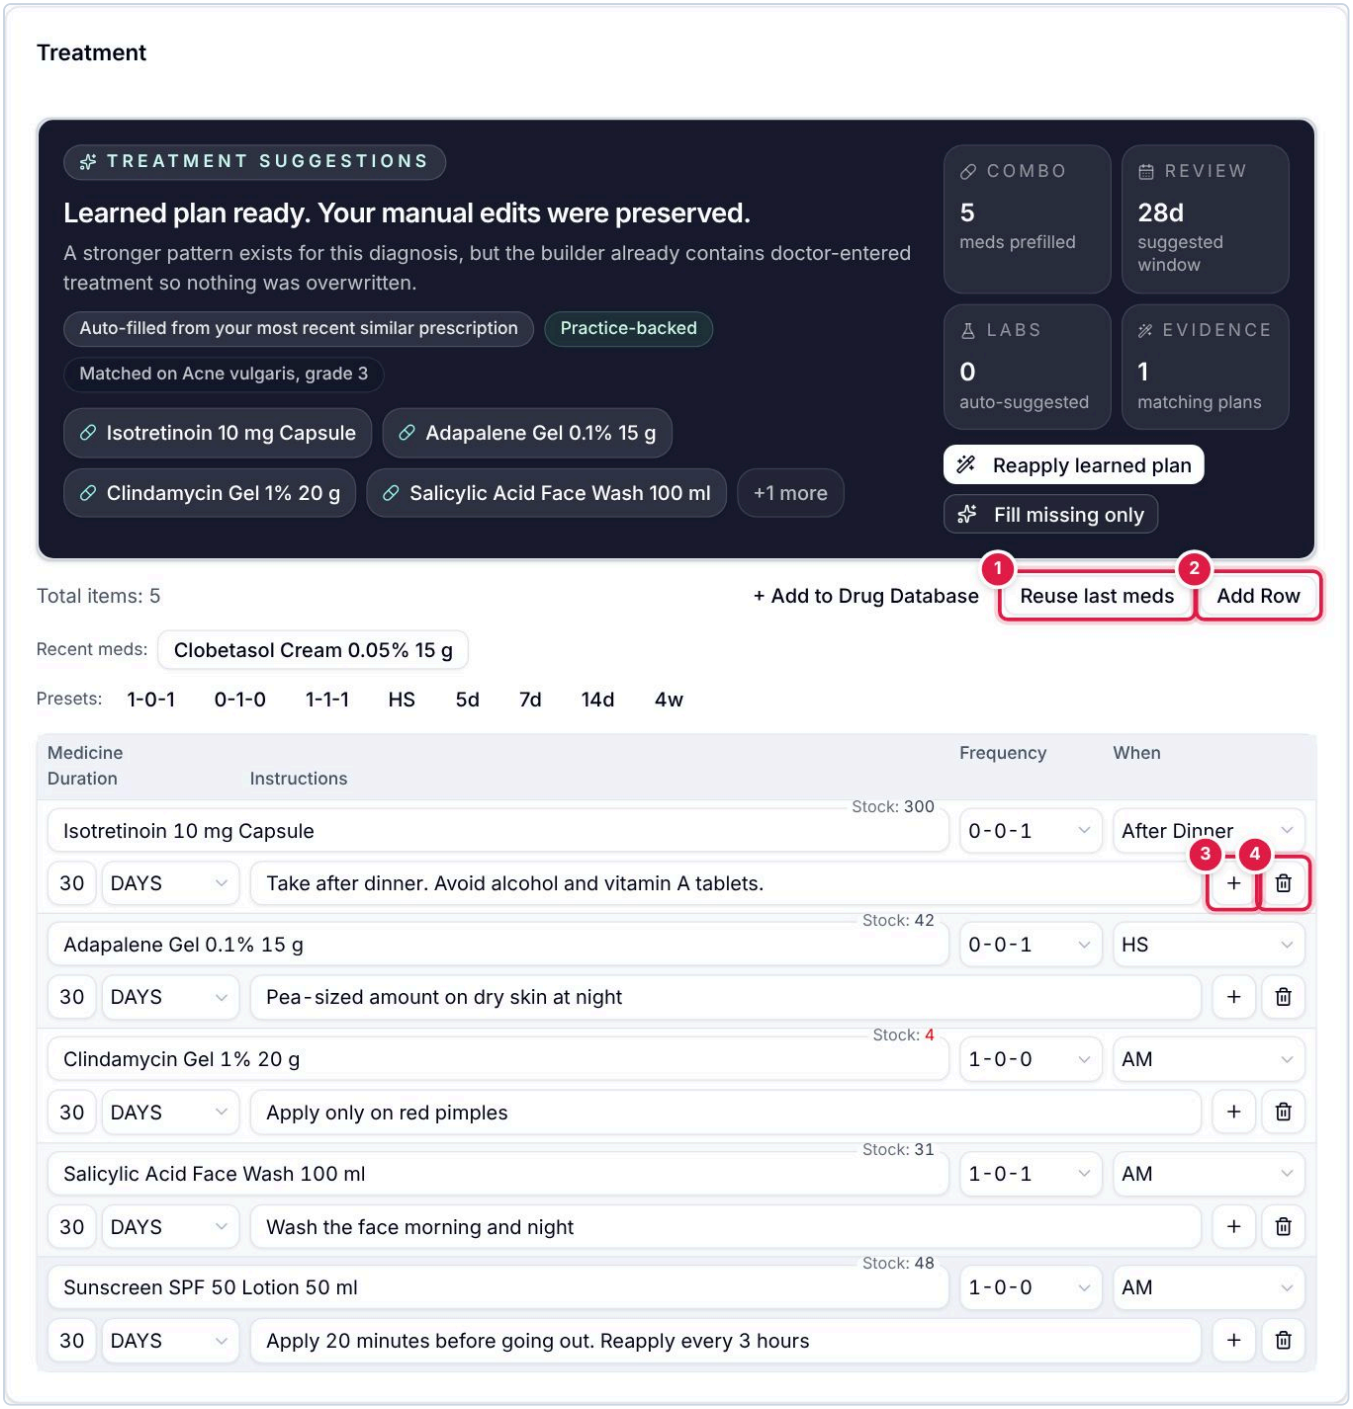

Figure 7.10. The finished medicine table for the acne patient. Each row has + (add below) and the bin (remove).

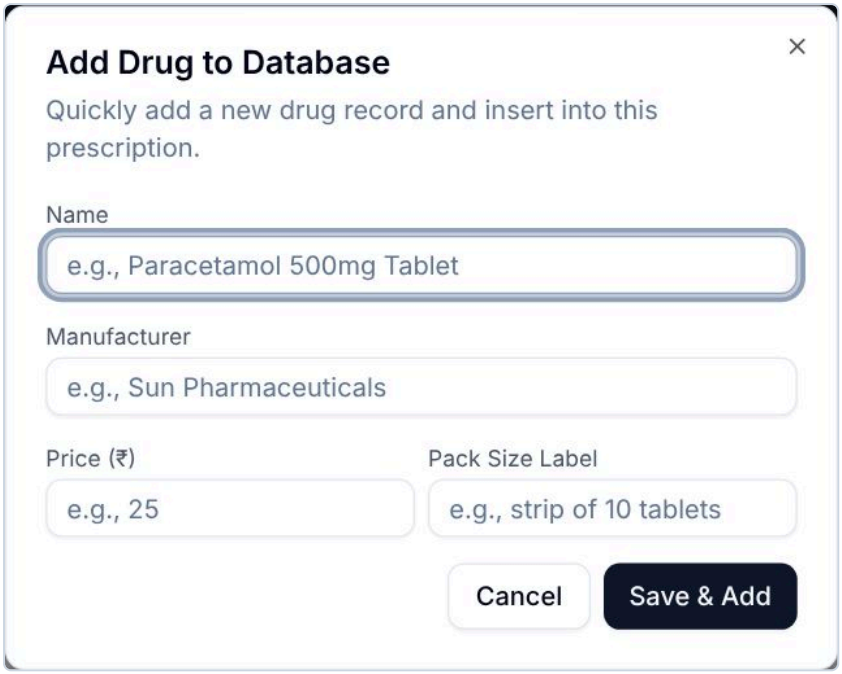

Figure 7.11. Add Drug to Database.

ON THE SCREEN	WHAT IT MEANS
1. Reuse last meds	Copies the previous visit's medicines. If there are none, the app says *No previous medications found*.
2. Add Row	Adds an empty row at the end.
3. + on a row	Adds an empty row below that row.
4. Bin on a row	Removes the row.
Total items	How many rows the table has.

7.9 Treatment suggestions

WHO USES THIS Doctors

When a diagnosis is entered, the dark **Treatment suggestions** panel at the top of the Treatment box looks for what was prescribed before for the same diagnosis: your recent prescriptions, similar visits and saved plans. If it finds a strong pattern and the table is still empty, it fills the table in for you. It never overwrites medicines you have already entered.

Figure 7.12. Treatment suggestions for a visit that already has medicines: the learned plan is ready but nothing was overwritten.

ON THE SCREEN	WHAT IT MEANS
Combo	How many medicines the suggested plan has.
Review	The suggested follow-up window in days.
Labs	How many investigations the plan suggests.
Evidence	How many earlier plans match.
Reapply learned plan	Replaces the table with the suggested plan.
Fill missing only	Adds only the medicines and follow-up details that are missing. What you entered stays.
Undo autofill / Undo quick-fill	Puts the table back as it was before the suggestion was applied.

> **TIP**
> The suggestions get better as more prescriptions are saved in the clinic. A new clinic sees *No strong pattern yet for this diagnosis* at first.

7.10 Procedures and investigations

WHO USES THIS Doctors

Type any procedure done today in **Procedures**, and anything you plan for a later visit in **Procedure Planned**. Both print.

Under **Investigations**, tick the tests the patient needs. If a test is not listed, type it in **Add Custom Investigation** and click **Add**. It is ticked for this patient and saved to the clinic's list, so everyone sees it next time.

Click **Manage saved investigations** to see the clinic's own tests. Use the pencil to rename one and the bin to remove one. Removing asks *Remove … for everyone in the clinic?*: click **Remove** to confirm or **Keep** to cancel.

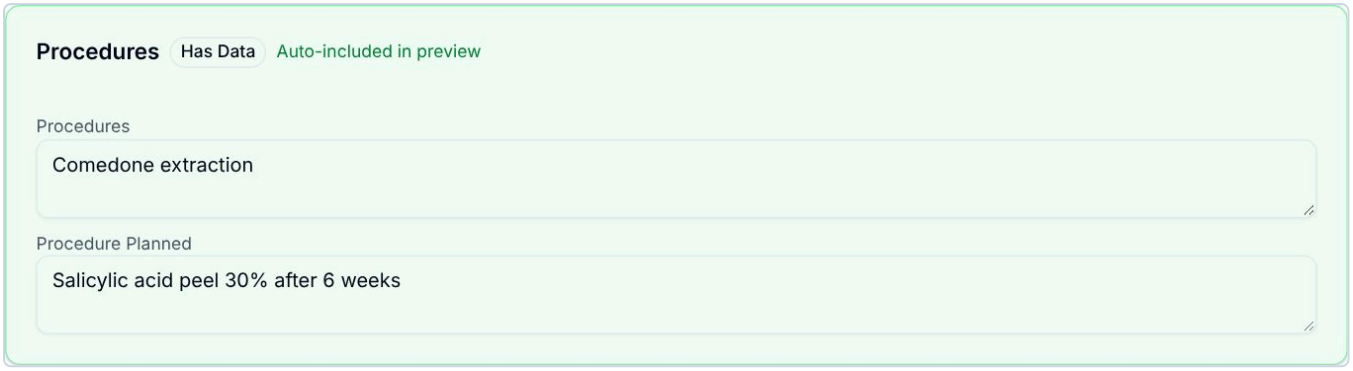

Figure 7.13. Procedures done today and planned.

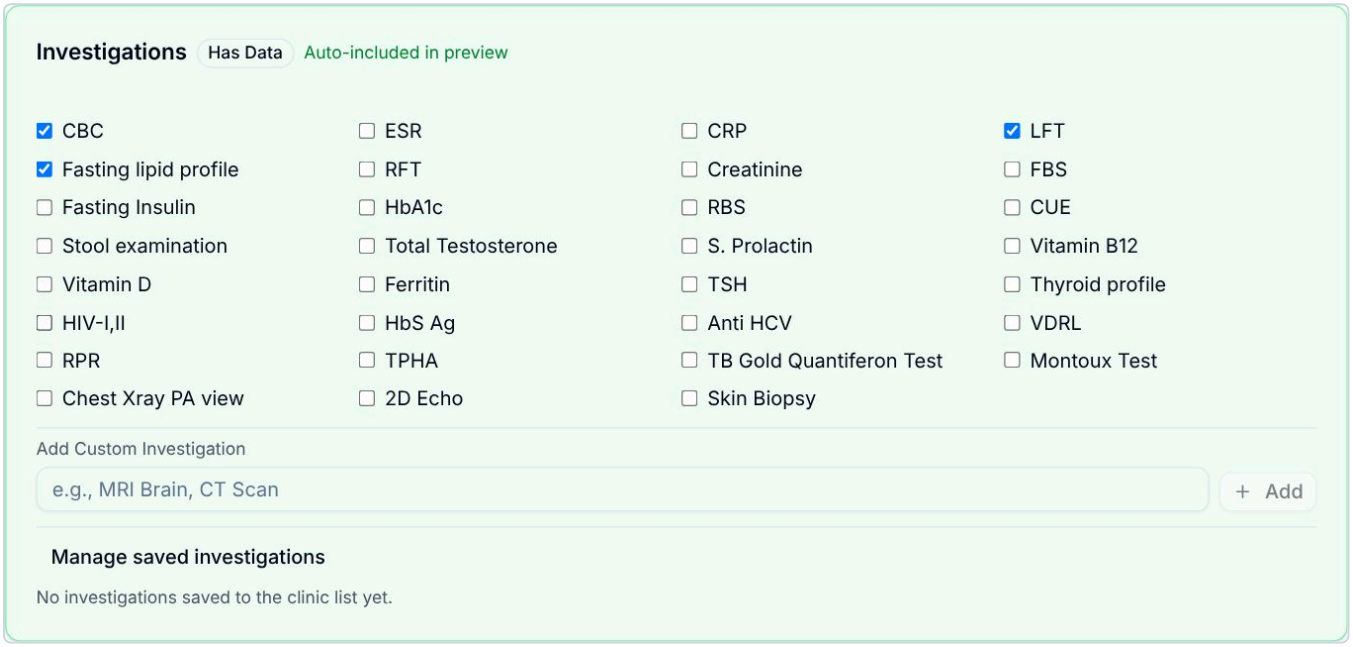

Figure 7.14. Investigations: CBC, LFT and fasting lipid profile before starting isotretinoin.

7.11 Add a custom section

WHO USES THIS Doctors

Use a custom section for anything that has no box of its own, such as diet advice or a skin-care routine. Click **Add Custom Section** below Investigations. Type a **Section Title** and its **Content**. The section prints under its own title. Click **Remove** to delete it.

Counselling advice entered with the visit plan prints under its own **Counseling** heading.

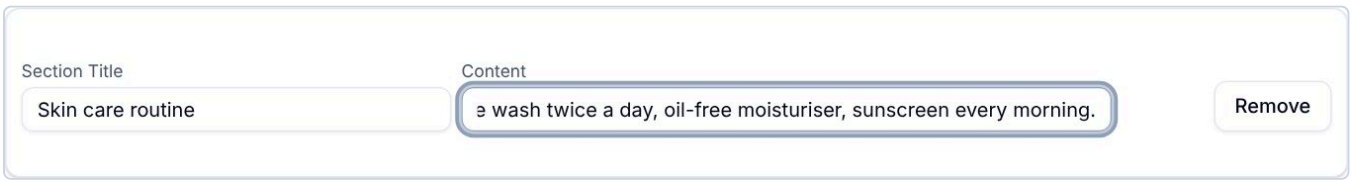

Figure 7.15. A custom section with skin-care advice.

7.12 Language, follow-up and review date

WHO USES THIS Doctors

In **Basic Information**, choose the **Language** the patient reads: English, Telugu or Hindi. With Telugu or Hindi, the free-text parts are translated when you open the print preview: diagnosis, complaints, histories, family history, procedures, investigations, custom sections, counselling and the per-medicine instructions. Medicine names, numbers and units stay as they are. Boxes that will be translated show a small translation icon next to their label.

Type **Follow-up Instructions**, or click one of the ready-made buttons such as **Follow up in 14 days**. Clicking one also sets the review date.

Set the **Review Date** with the date box, or click a shortcut under it: **7d**, **2w**, **3w**, **30d**, **6w** and similar. When the visit is completed, the review date becomes the patient's follow-up date.

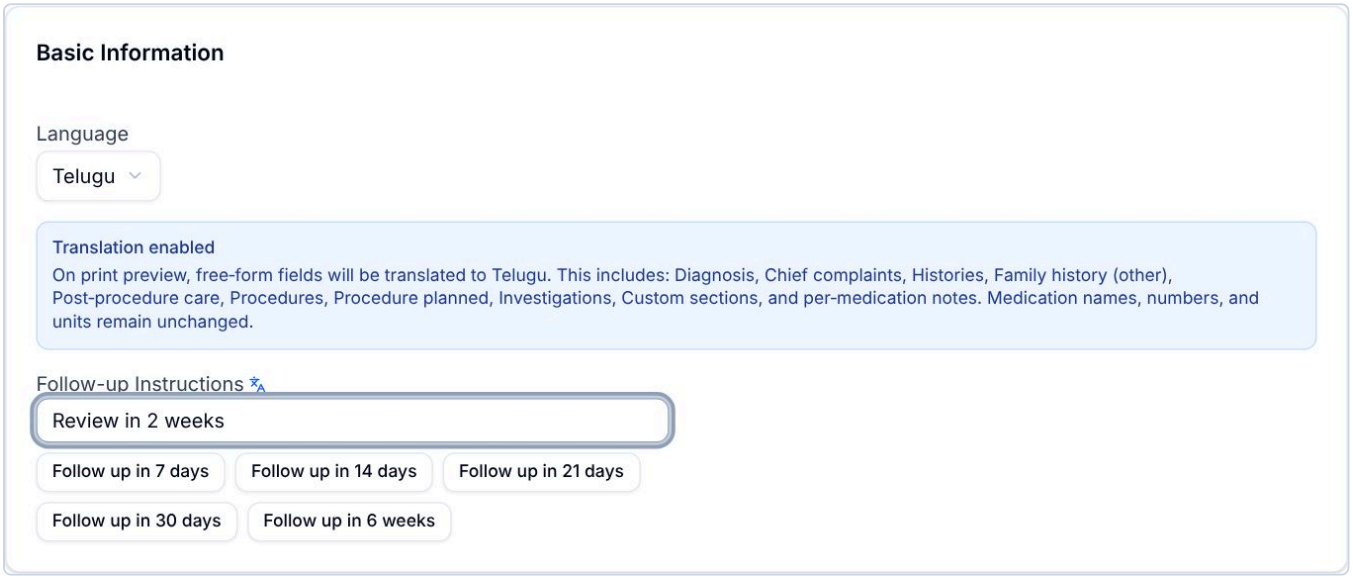

Figure 7.16. Telugu chosen: the box explains what will be translated on print.

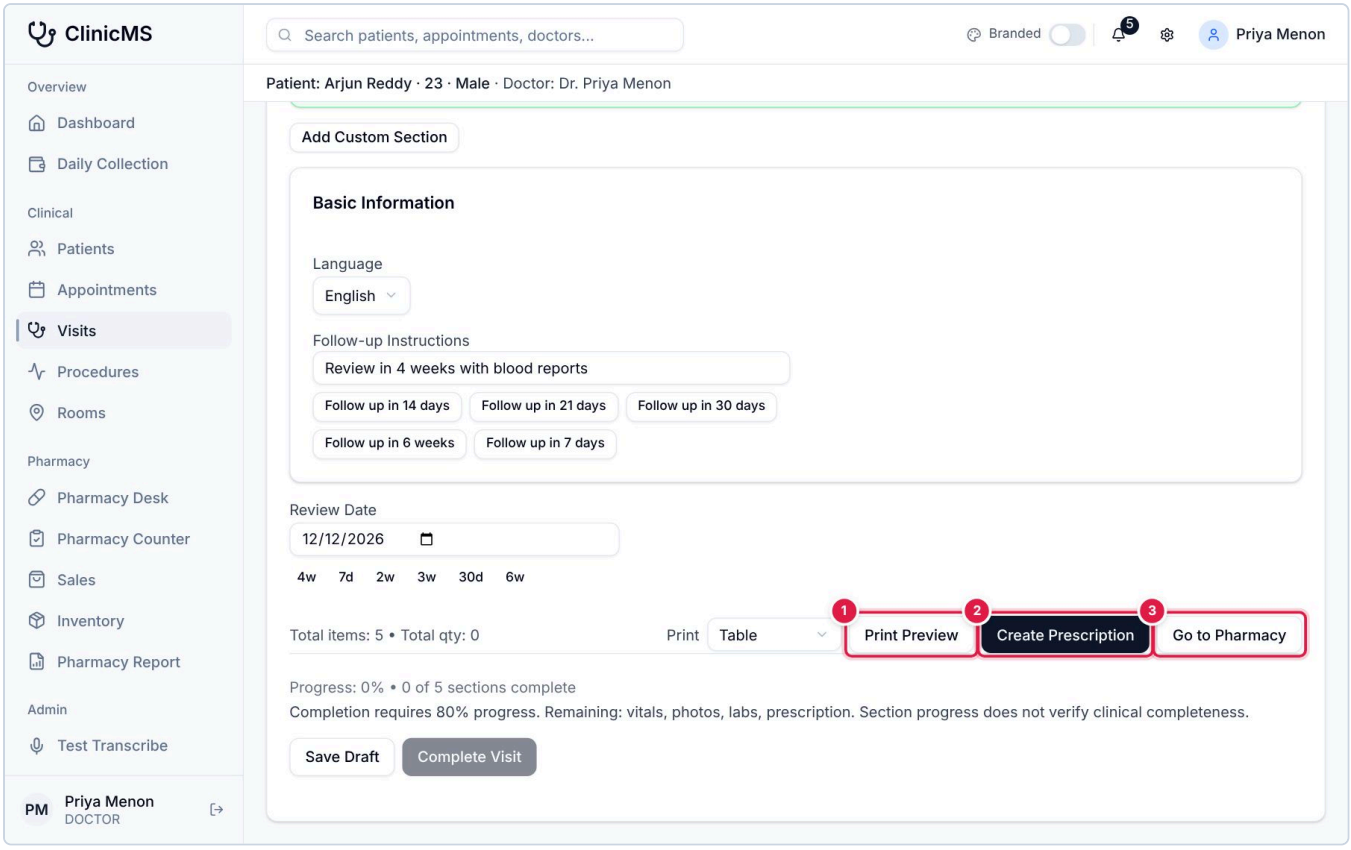

Figure 7.17. Review Date with its shortcuts, and the buttons at the bottom of the tab.

7.13 Save the prescription

WHO USES THIS Doctors

Saving makes the prescription part of the patient's record and sends it to the Pharmacy Desk queue. You need a patient, a doctor and at least one medicine. If the visit has never been saved, the app saves it first.

1. Check the medicine table and the follow-up.
2. Click **Create Prescription** at the bottom of the tab. A message confirms *Prescription created*, or *Prescription updated* if you are saving changes to one already saved.
3. The app asks **Go to Pharmacy?**. Click **Yes, go to Pharmacy** to bill the medicines now, or **Stay Here** to keep working.

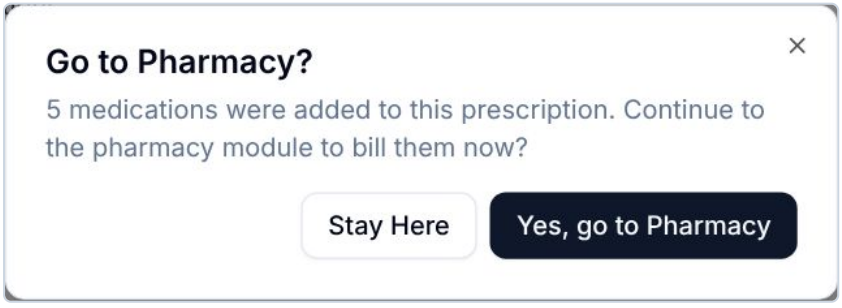

Figure 7.18. After saving, the app offers to open the pharmacy bill.

ON THE SCREEN	WHAT IT MEANS
Go to Pharmacy	At the bottom of the tab. Opens a new pharmacy bill for this patient and visit, without saving first.
Print (Table / Text)	Chooses how medicines print: as a table, or as lines of text.
Total qty	The total quantity of all rows, used by the pharmacy.

> **TAKE CARE**
> If the button is greyed out or the app says *Cannot create prescription*, the message says what is missing, for example *Add at least one medication*.

7.14 Use templates

WHO USES THIS Doctors

A template saves a whole prescription you write often, such as your usual acne starter, so you can apply it in one click. The bar at the top of the tab has all the template tools.

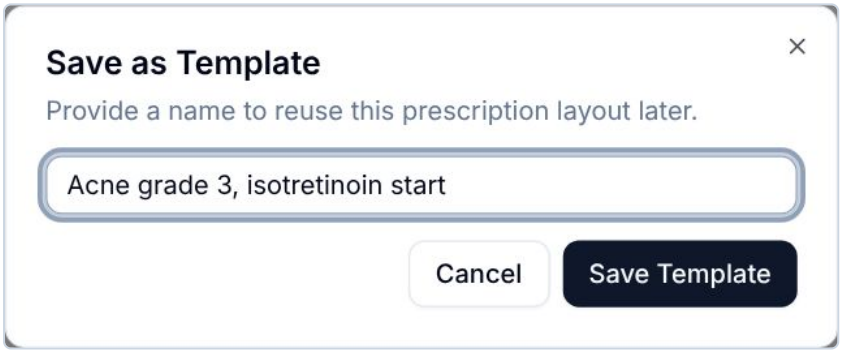

Figure 7.19. Save current: name the template.

Figure 7.20. The templates list with saved and default templates.

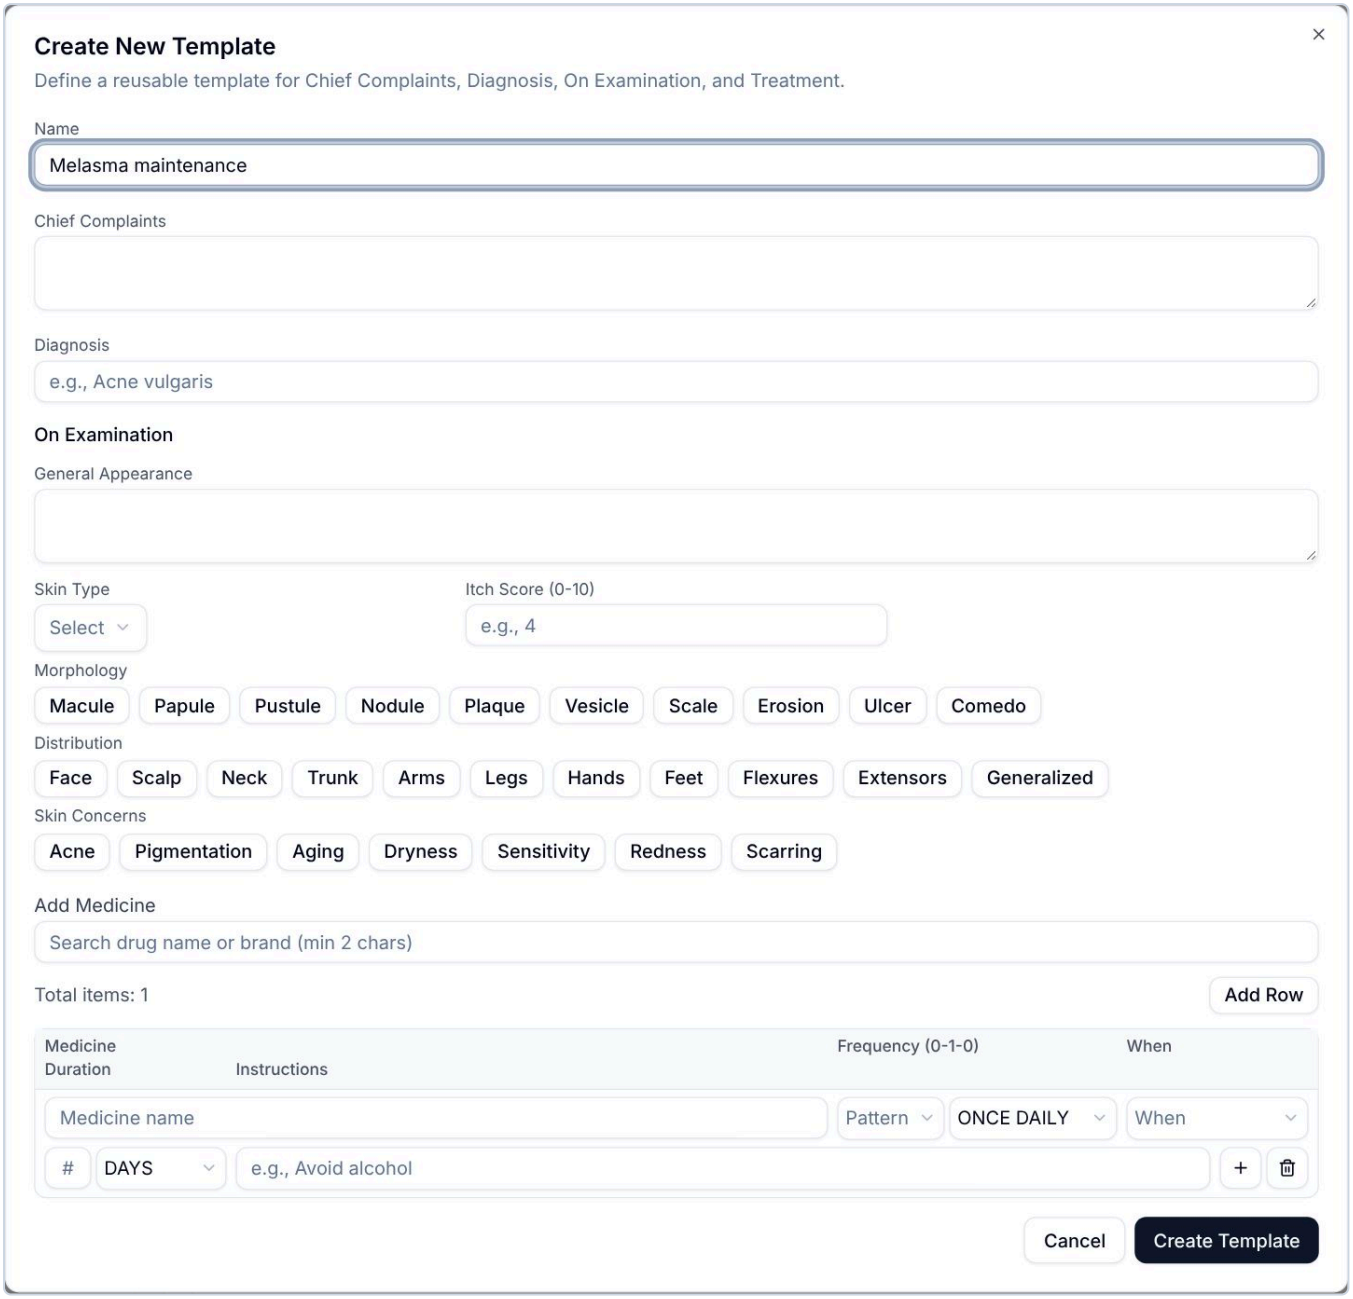

Figure 7.21. New template: build a template from scratch.

ON THE SCREEN	WHAT IT MEANS
Templates list	Click it to see **Saved templates** (yours and the clinic's) and **Default templates** that come with the app. Click a name to apply it. **No template** clears the choice. The bin next to a saved template deletes it.
Refresh	Reloads the list, for example after a colleague saved a new template.
Undo / Redo	Steps back or forward through your recent changes to the medicine table.
Reset to default	Clears the medicine table and the follow-up instructions for this visit. Use with care.

Save current	Saves the current medicines as a template. Type a name such as *Acne starter, isotretinoin* and click **Save Template**.
Save fields	Saves only the chief complaints, diagnosis and examination as a template on this computer.
New template	Builds a template from scratch: name, chief complaints, diagnosis, examination findings and medicines.

7.15 Dictate with the microphone

WHO USES THIS Doctors

The microphone buttons next to **Chief Complaints** and **Detailed Examination** turn speech into text. Click the microphone and allow the browser to use it. The button turns red while recording. Talk with the patient as usual, then click the button again to stop. The button spins while the recording is transcribed, and the text is added to the end of the box. A recording stops by itself after 10 minutes.

For Chief Complaints, the app separates the doctor's and the patient's voices and inserts what the patient said. For Detailed Examination it inserts everything. Always read the text before saving. If nothing is heard, the app says *No speech detected*. To check a microphone, use the Test Transcribe page (see the Voice transcription test chapter).

7.16 Preview and print the prescription

WHO USES THIS Doctors

Click **Print Preview** at the bottom of the Prescription tab. The preview fills the screen: the pages on the left exactly as they will print, and the print settings on the right. The page updates as you change a setting (**Live Preview: On**). Click **Live Preview: Off** to pause updates while you change several things.

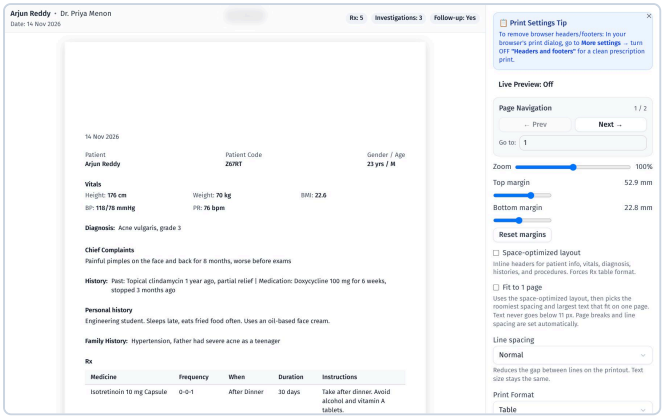

Figure 7.22. Print Preview: the prescription on the left, the settings on the right.

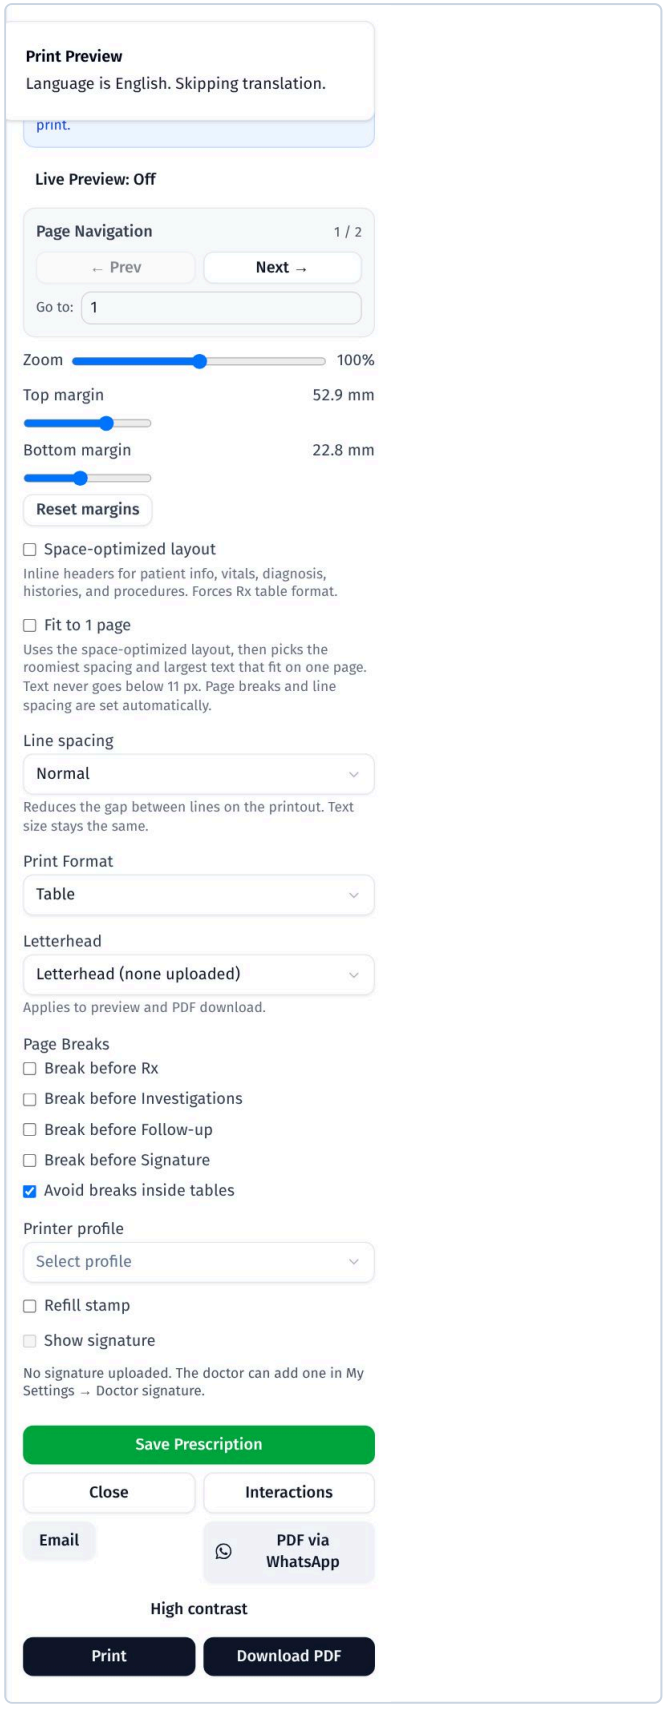

Figure 7.23. The settings panel of the preview.

ON THE SCREEN	WHAT IT MEANS
Zoom	Makes the preview bigger or smaller on screen. It does not change the printout.
Top margin / Bottom margin	Moves the content down from the top or up from the bottom, for letterheads with a printed header or footer. **Reset margins** goes back to the default.
Space-optimized layout	Puts patient details, vitals, diagnosis, histories and procedures on fewer lines with inline headings. Always prints medicines as a table.
Fit to 1 page	Shrinks spacing and text, down to a minimum readable size, so everything fits on one page. It turns on the space-optimized layout and sets line spacing and page breaks itself. A green line says *Fits on 1 page*. An amber line says how many pages it will take if it cannot fit.
Line spacing	Normal, Compact or Tight. Reduces the gap between lines. Text size stays the same.
Print Format	Table or Text for the medicine list.
Letterhead	**Letterhead** prints on the doctor's letterhead from My Settings, or the clinic's. **None (Plain)** prints on plain paper, for pre-printed letterhead paper. Applies to the preview and the PDF.
Page Breaks	Start a new page before the medicines (Rx), Investigations, Follow-up or Signature. **Avoid breaks inside tables** keeps the medicine table on one page where possible.
Printer profile	Saved margin settings for a particular printer, if your clinic has set them up.
Refill stamp	Prints a *Refill eligible* stamp on the first page.
Show signature	Prints the doctor's signature from My Settings. If none is uploaded, the box says so and cannot be ticked. The choice is remembered for this doctor on this computer.
Page Navigation	Shown when the prescription runs to more than one page: **Prev**, **Next** and **Go to** a page.

> **TIP**
> The blue tip at the top of the panel explains how to stop the browser printing its own header and footer: in the print window open **More settings** and turn off **Headers and footers**.

7.17 Fit a long prescription on one page

WHO USES THIS Doctors

Tick **Fit to 1 page**. The app tries the roomiest layout that fits and reports the result under the box.

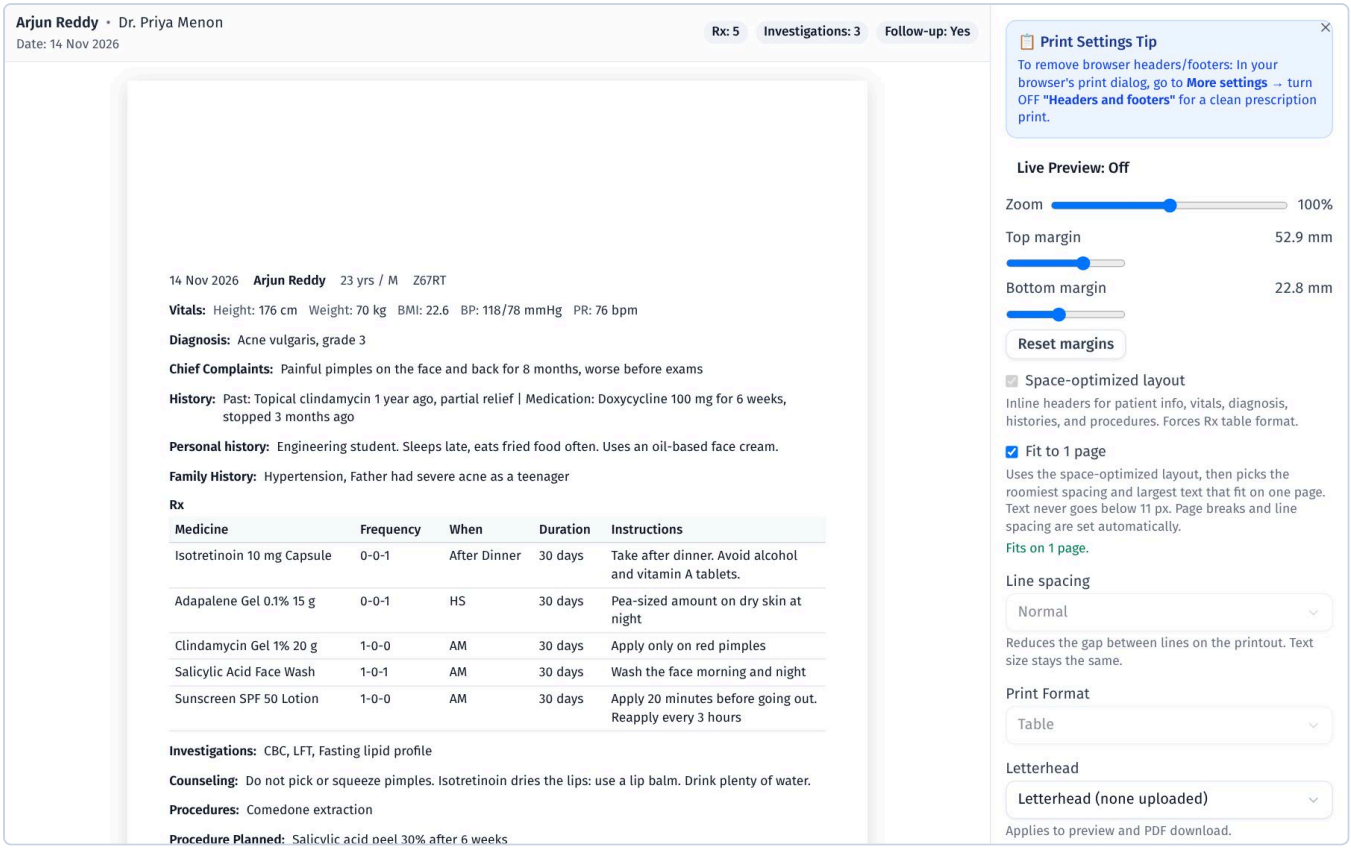

Figure 7.24. Fit to 1 page switched on, with the result shown under it.

7.18 Print, download and share

WHO USES THIS Doctors

The buttons at the bottom of the preview panel finish the job. **Save Prescription** (green) saves from inside the preview. Download PDF, WhatsApp and Email save the latest visit details first, so the copy the patient gets matches the record.

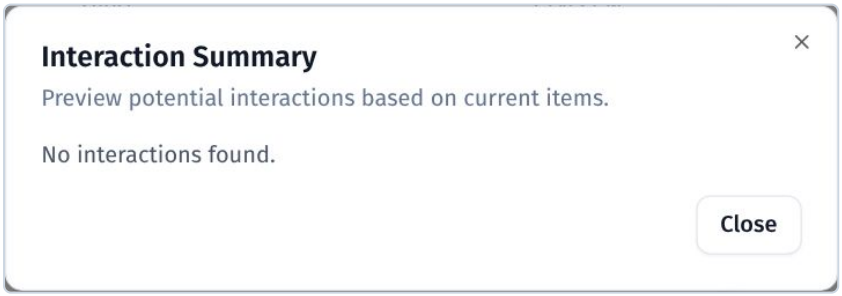

Figure 7.25. The Interaction Summary for the current medicines.

ON THE SCREEN	WHAT IT MEANS
Save Prescription	Saves the prescription. Reads *Add medications to save* until there is at least one medicine.
Close	Closes the preview.

Interactions	Checks the medicines for known interactions and lists them, or says *No interactions found*.
Email	Emails the PDF to the patient's email address. Works only after the prescription is saved, and only if the patient has an email address on file.
PDF via WhatsApp	Makes the PDF and shares it. On a phone or tablet, the share menu opens so you can pick WhatsApp. On a computer, the PDF downloads and a WhatsApp chat with the patient's number opens: attach the downloaded file there. Needs a phone number on the patient's record.
High contrast	Shows the preview in high contrast, to check it is readable.
Print	Opens the browser's print window for the prescription.
Download PDF	Saves the prescription as a PDF file named after the prescription number.

7.19 Tele-video consultations on the print

WHO USES THIS Doctors

When the visit's **Consultation type** is **Tele-video** (set at the top of the visit, see the Visits chapter), the prescription prints *Consultation: Tele-video* beside the date and adds a note at the end saying it was issued after a tele-video consultation with the patient's consent and is not valid for medico-legal purposes. The patient's consent must be ticked before the visit or prescription can be saved.

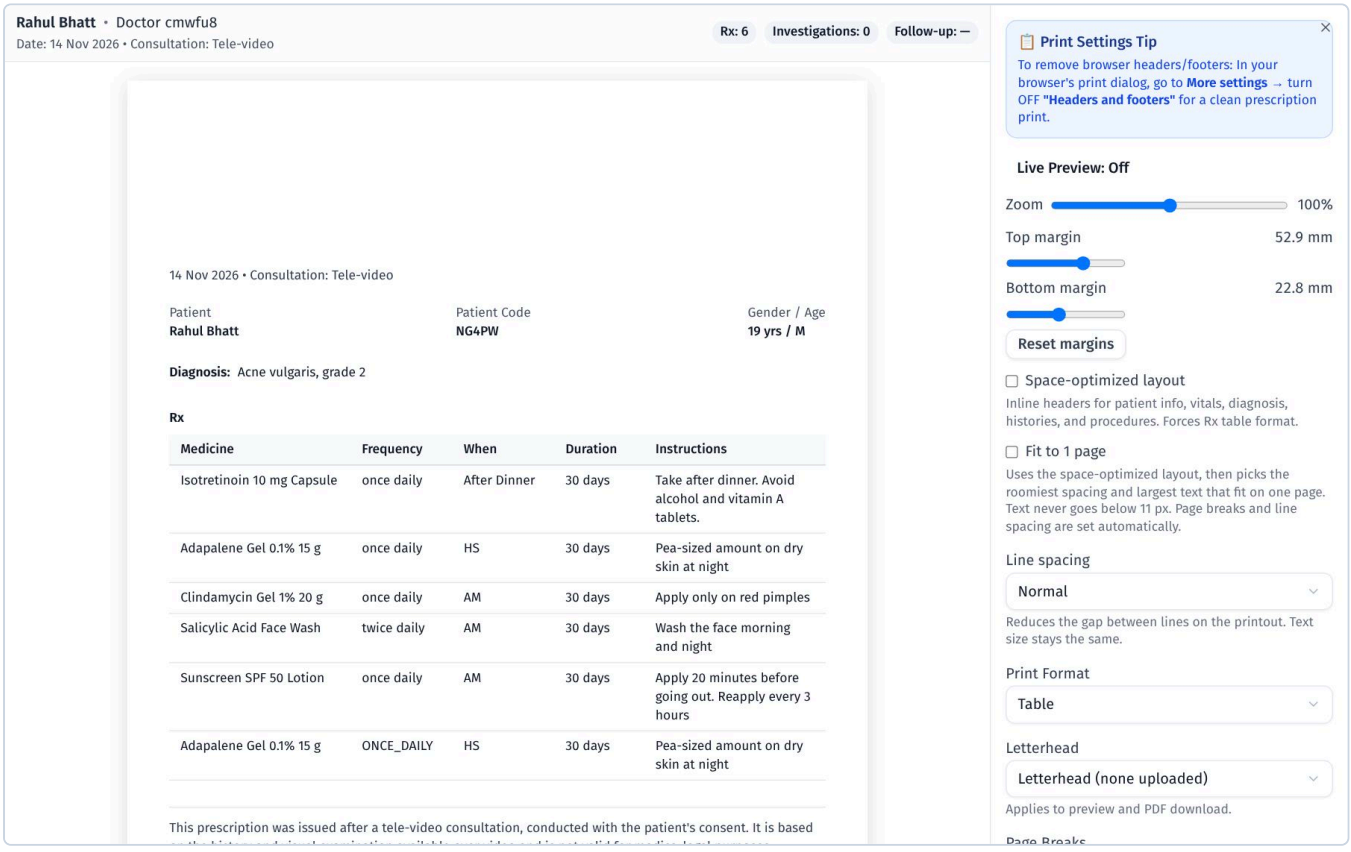

Figure 7.26. A tele-video prescription: the consultation label next to the date.

7.20 Print layout settings (Customization tab)

WHO USES THIS Doctors

The **Customization** tab of the visit sets up how prescriptions are laid out on paper. Most clinics set it once per doctor and then use **Load Doctor Default**.

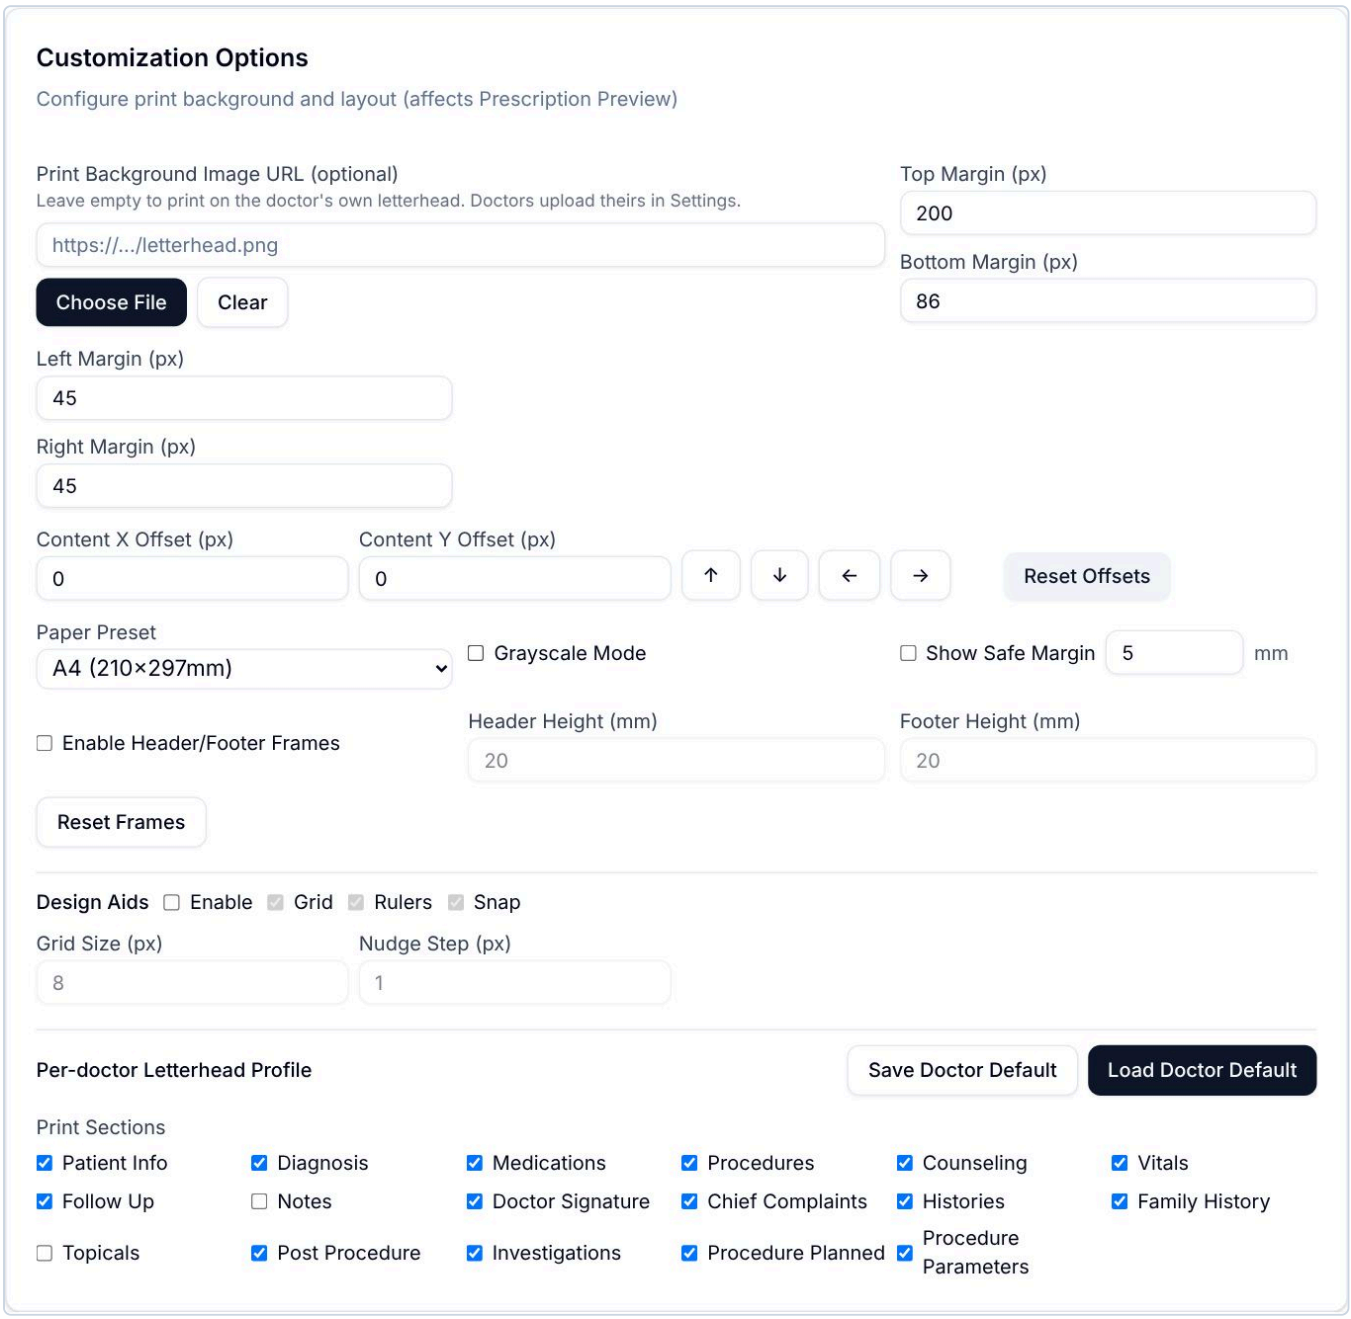

Figure 7.27. The Customization tab.

ON THE SCREEN	WHAT IT MEANS
Print Background Image URL	A letterhead image to print behind the prescription. Leave empty to use the doctor's own letterhead from My Settings. **Choose File** picks an image from the computer. **Clear** removes it.
Top / Bottom / Left / Right Margin (px)	Space around the content, to keep clear of a printed header and footer.
Content X / Y Offset	Moves the whole content sideways or up and down. The arrow buttons nudge it one step at a time. **Reset Offsets** puts it back.
Paper Preset	A4 or Letter.
Grayscale Mode	Prints in black and white.
Show Safe Margin	Shows the safe printing area, in mm, on the preview.
Enable Header/Footer Frames	Reserves a header and footer area of the heights given in mm. **Reset Frames** sets both to 20 mm.
Design Aids	Grid, rulers and snap-to-grid on the preview, with the grid size and nudge step, to line content up with a letterhead.
Save Doctor Default / Load Doctor Default	Saves these layout settings for the selected doctor, or applies the saved ones.
Print Sections	Tick the parts of the prescription to print, for example vitals, diagnosis, histories, investigations, follow-up and signature. Untick a part to leave it off the paper.

CHAPTER 8

Procedures

The Procedures page records machine treatments such as laser hair reduction, radio-frequency tightening and Hydrafacial: who did the session, which body parts were treated, the skin assessment, and the machine settings for each pass. Each saved procedure is stored as a visit for the patient, so it also appears in the patient's history. Doctors, admins and owners can open this page.

8.1 The Procedures page

WHO USES THIS Doctors, admins, owners

Open **Procedures** from the Clinical part of the menu. The page has three tabs. **New Procedure** is the form for recording a session. **Procedure History** lists earlier sessions for the patient chosen in the form. **Analytics** is reserved for procedure statistics.

When the page opens, the form already has the first patient, the first doctor and the first nurse in the clinic's lists filled in. Always change them to the people for this session before you save.

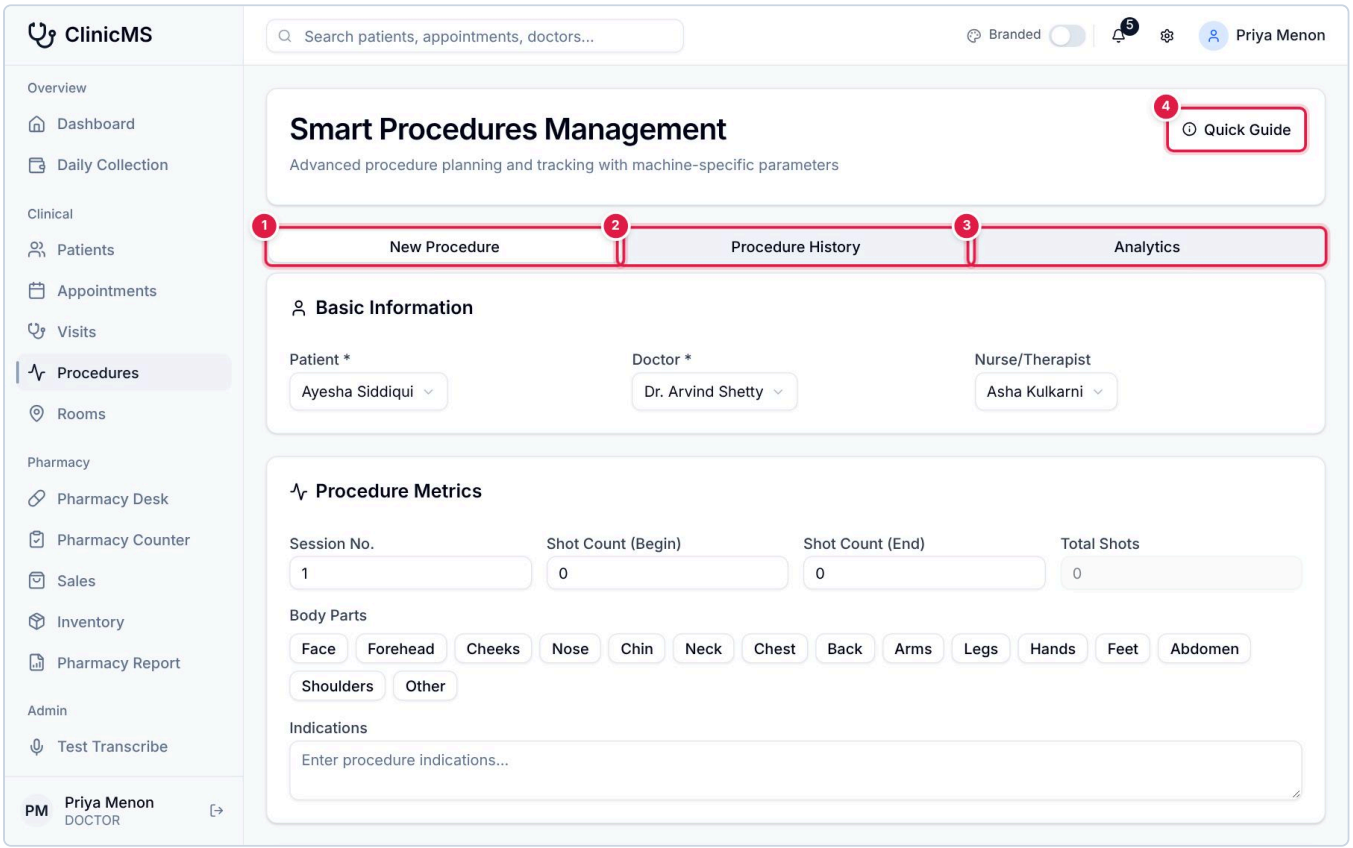

Figure 8.1. The Procedures page opens on the New Procedure tab.

ON THE SCREEN	WHAT IT MEANS
1. New Procedure	The form for a new session.
2. Procedure History	Earlier sessions of the selected patient.
3. Analytics	Not in use yet. It shows *Analytics dashboard coming soon*.
4. Quick Guide	A short summary of this page.

8.2 Record a procedure session

WHO USES THIS Doctors (nurses and therapists work alongside, but the doctor saves)

Fill the form during or straight after the session, while the machine readings are in front of you. Fields marked * are required. The form also needs a machine before it will save.

1. Under **Basic Information**, choose the **Patient ***, the **Doctor *** and the **Nurse/Therapist** who ran the machine.
2. Under **Procedure Metrics**, type the **Session No.** and the machine's shot counter at the start (**Shot Count (Begin)**) and at the end (**Shot Count (End)**). **Total Shots** works itself out as end minus begin.
3. Click each treated area under **Body Parts**. A selected area turns dark. Click it again to remove it.
4. Type why the procedure is being done in **Indications**.
5. Under **Skin Type Assessment**, choose the **Fitzpatrick Type**, and the **Robert Type**, **Scar Type** and **Herpes Status** where they apply.

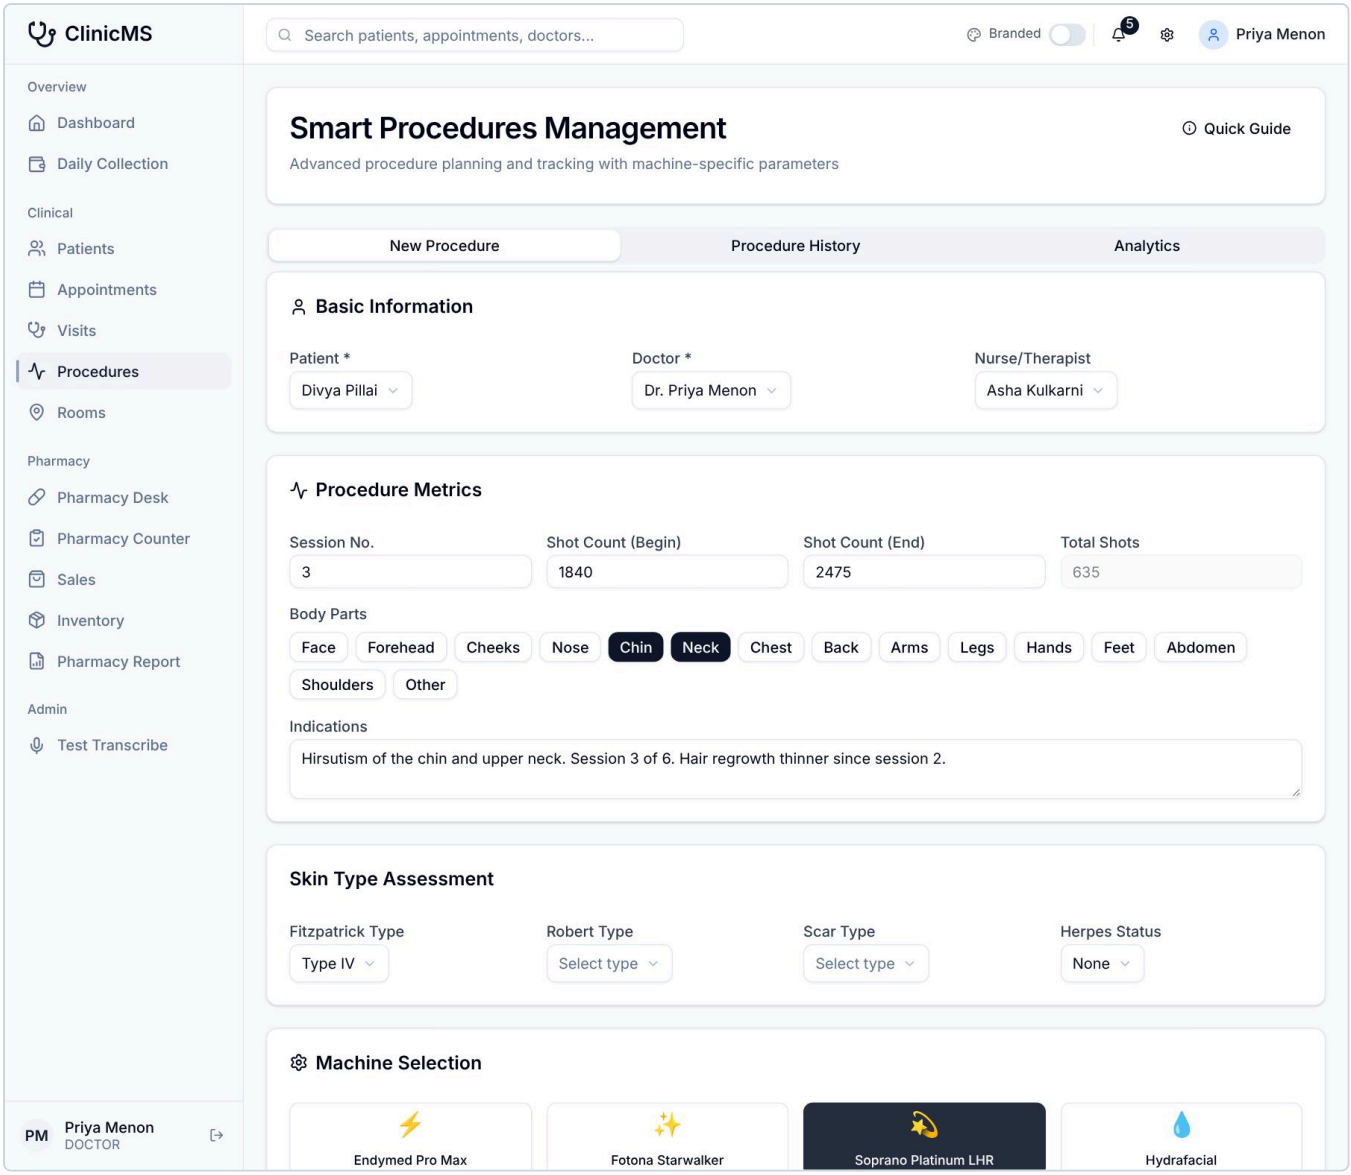

Figure 8.2. Basic information, procedure metrics, body parts and skin type filled in for a laser hair reduction session.

ON THE SCREEN	WHAT IT MEANS
Patient *	The patient being treated. Choosing a patient also loads their earlier sessions into Procedure History.
Doctor *	The doctor responsible for the session.
Nurse/Therapist	The nurse who operated the machine. Only staff with the Nurse role are listed.
Session No.	Which session of the course this is. After a save the form adds 1 for the next session.
Shot Count (Begin) / (End)	The machine's shot counter before and after the session.
Total Shots	End minus begin. You cannot type in it.

Body Parts	Face, Forehead, Cheeks, Nose, Chin, Neck, Chest, Back, Arms, Legs, Hands, Feet, Abdomen, Shoulders, Other. You can pick several.
Fitzpatrick Type	Skin type I to VI, which guides laser energy.
Robert Type	Type 1 to 4.
Scar Type	Atrophic, Hypertrophic, Keloid, Rolling, Boxcar or Ice Pick, for scar treatments.
Herpes Status	Active, Inactive, History or None. Important before facial laser and peels.

8.3 Choose the machine and enter its settings

WHO USES THIS Doctors

Each machine has its own settings. When you click a machine under **Machine Selection**, a table of that machine's settings appears below it, with one column per pass. Type the setting used for each pass. Leave unused passes empty.

1. Click the machine used, for example **Soprano Platinum LHR**. It turns dark.
2. In the **Parameters** table, type the value for each setting under **Pass 1**, **Pass 2** and so on.
3. Type anything else worth recording in **Additional Notes**, such as how the patient tolerated it and aftercare advice.
4. Click **Save Procedure**. The browser shows *Procedure saved successfully!*. Click **OK**.

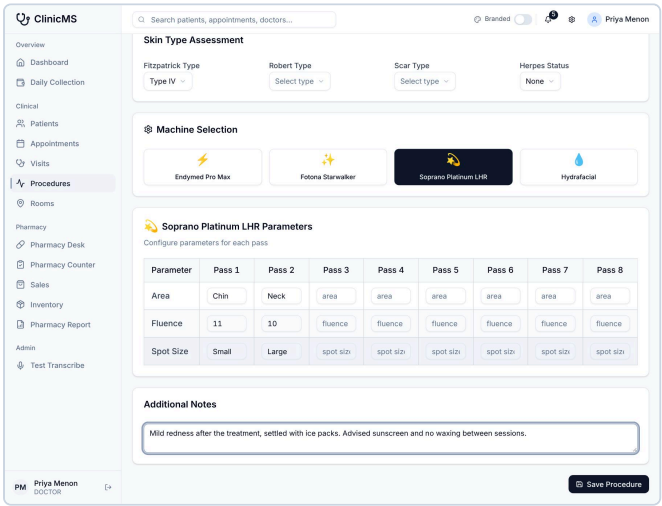

Figure 8.3. Soprano Platinum LHR selected, with the settings for two passes and the notes.

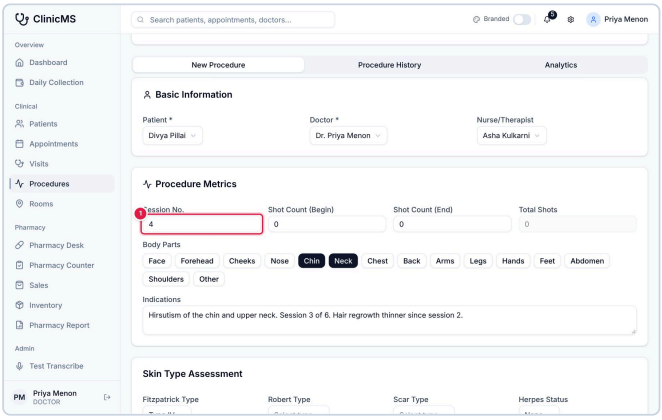

Figure 8.4. After saving, the form keeps the patient and machine and moves on to the next session number.

ON THE SCREEN	WHAT IT MEANS
Endymed Pro Max	Settings: Intensity, RF, Depth, Area Treated, Mode. Up to 8 passes.
Fotona Starwalker	Settings: Area, Spot Size, Energy, Fluency, Frequency, Wavelength, PTP Mode. Up to 8 passes.

Soprano Platinum LHR	Settings: Area, Fluence, Spot Size. Up to 8 passes.
Hydrafacial	Settings: Actives Used, Area. One pass.

After a save, the form keeps the patient, doctor, nurse, body parts and skin type, adds 1 to the session number (marked 1), and empties the shot counts, the machine settings and the notes. This makes it quick to record the next session of a course.

> **TAKE CARE**
> If the patient, doctor or machine is missing, the browser shows *Please fill in all required fields* and nothing is saved.
>
> A saved procedure cannot be changed or deleted from this page. Check the settings before you click **Save Procedure**.

8.4 Look at earlier sessions

WHO USES THIS Doctors

Before a repeat session, check what was used last time. **Procedure History** shows the sessions of the patient currently chosen in the **Patient *** box on the New Procedure tab. Choose the patient there first.

1. On the **New Procedure** tab, choose the patient.
2. Click the **Procedure History** tab. The heading says how many sessions were found.
3. Click **Refresh** if you saved a session a moment ago and it is not listed yet.
4. Click **Load & Edit** on a card to start a new session from it. The app switches to the New Procedure tab with that session's patient, doctor and machine chosen. Fill in the rest and save it as a new session.

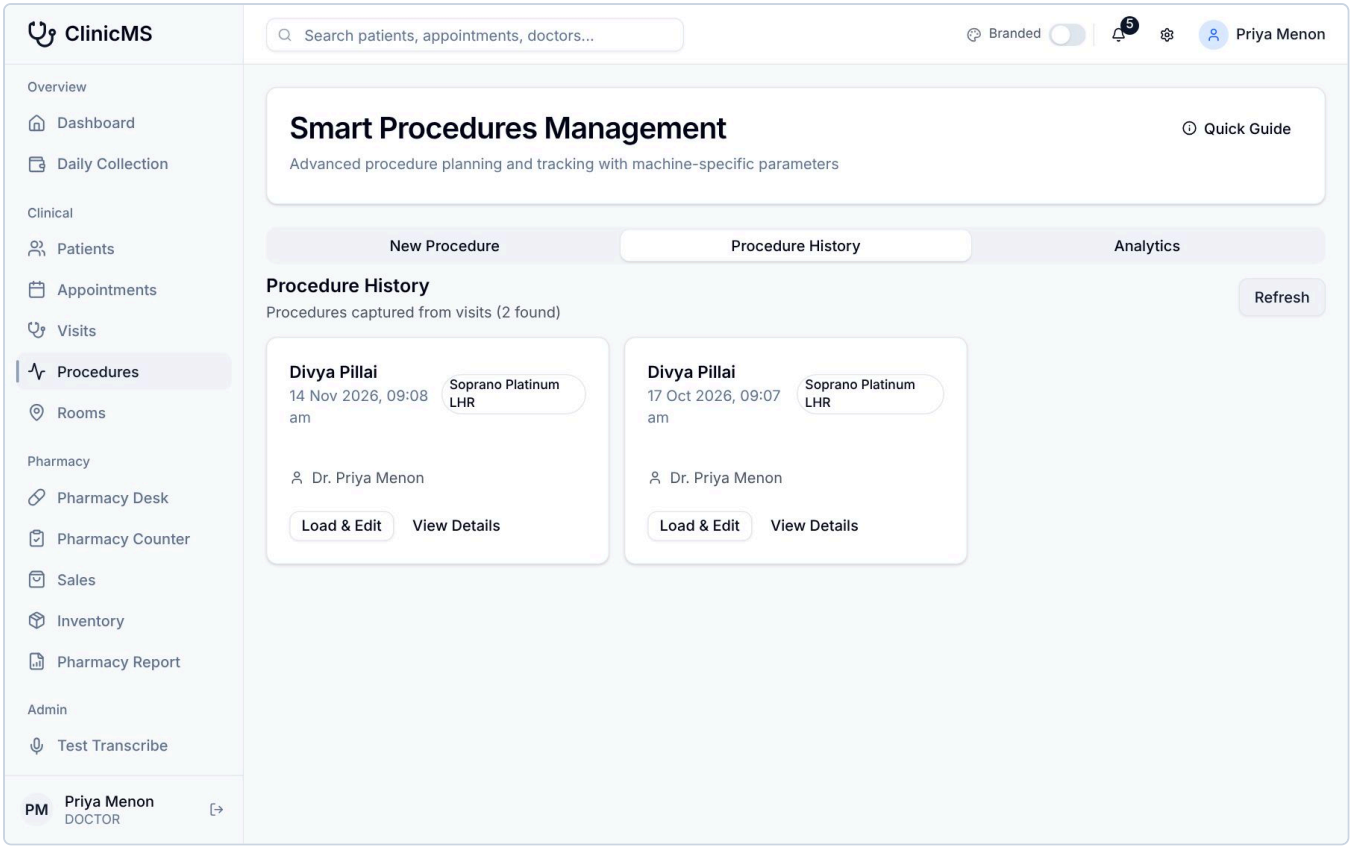

Figure 8.5. Procedure History for the selected patient, one card per session.

ON THE SCREEN	WHAT IT MEANS
Card heading	Patient name and the date and time the session was saved.
Badge	The machine or procedure name.
Doctor line	The doctor responsible. The card does not show the machine settings.
Load & Edit	Starts a new session with the same patient, doctor and machine. The session number goes back to 1, so correct it.
View Details	Marks the card as selected. It does not open anything more at present.

> **TIP**
> Procedures saved here also appear in the patient's visit history on the Visits page.

8.5 Analytics

WHO USES THIS Doctors, admins, owners

The **Analytics** tab is a placeholder. It shows *Analytics dashboard coming soon* and no figures yet, even when procedures are saved. For procedure counts and income, use the Reports chapter.

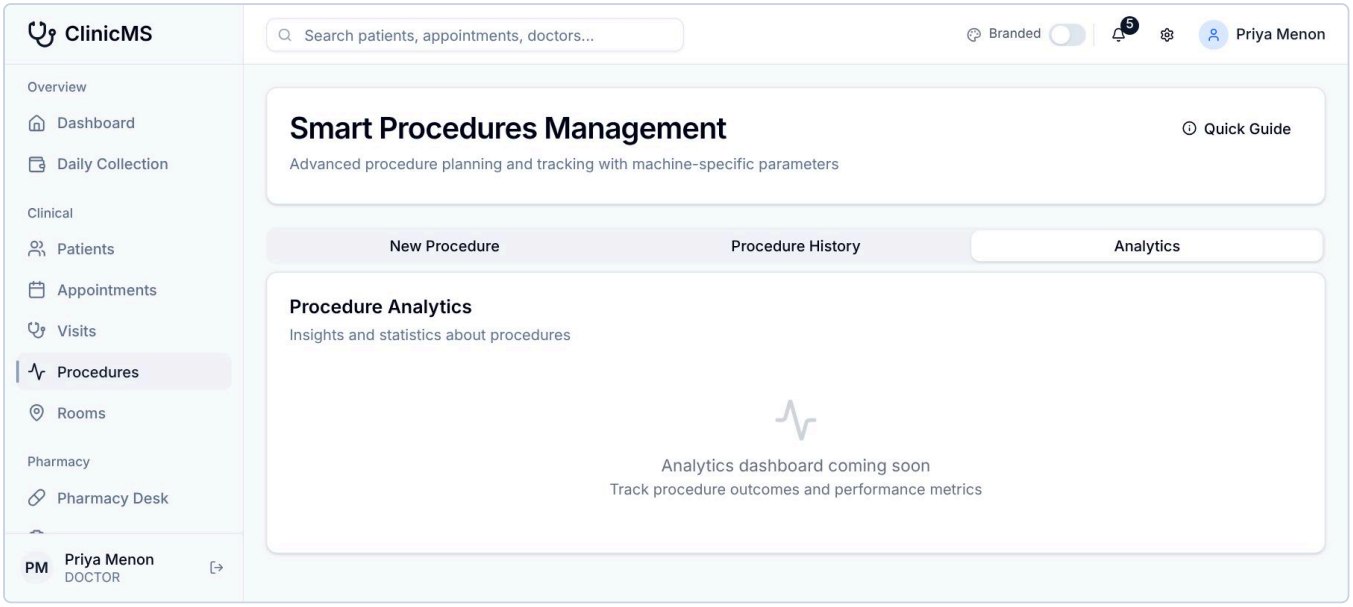

Figure 8.6. The Analytics tab.

8.6 The Quick Guide

WHO USES THIS Everyone who uses the page

Click **Quick Guide** at the top right for a short reminder of how to create procedures, enter machine settings and use the history.

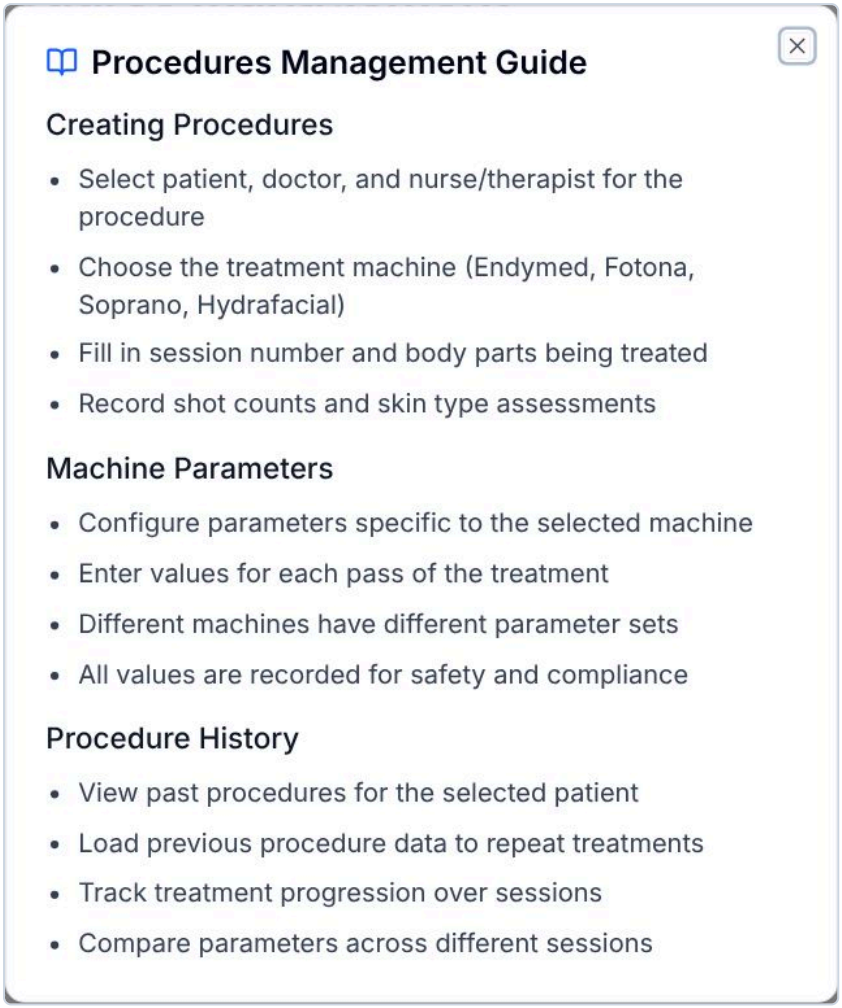

Figure 8.7. The Procedures Management Guide.

CHAPTER 9

Pharmacy Desk

The Pharmacy Desk is the pharmacy's home screen. It shows today's figures, opens the other pharmacy screens, and holds three tools: the Pharmacy AI assistant, Partner Daily Sync for partner pharmacies' sales, and Treatment Packages. Pharmacists land here when they sign in.

9.1 Read the Pharmacy Desk

WHO USES THIS Pharmacists, doctors, admins

Open **Pharmacy Desk** from the menu. The dark command centre at the top sums up the day and leads to every other pharmacy screen. Reception staff see the desk without the sales figures, the New sale card and the Refresh, Invoices and Drugs buttons.

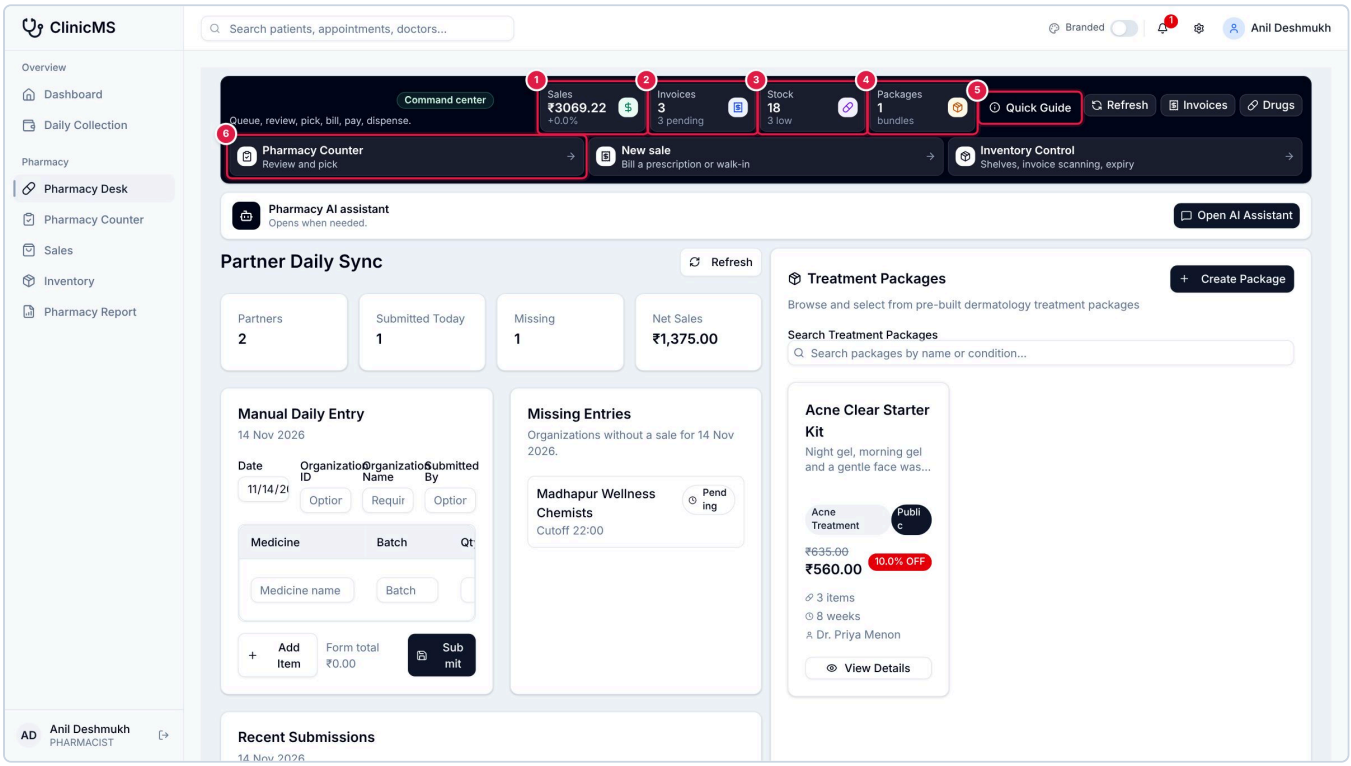

Figure 9.1. The Pharmacy Desk, with the command centre numbered.

ON THE SCREEN	WHAT IT MEANS
1. Sales	Today's pharmacy sales in rupees. The percentage under it compares today with yesterday.
2. Invoices	Bills made today. **pending** is how many of them are not yet fully paid.
3. Stock	How many medicines are in the drug list. **low** is how many are running low.

4. Packages	How many treatment packages (bundles) exist.
5. Quick Guide, Refresh, Invoices, Drugs	**Quick Guide** explains the pharmacy screens. **Refresh** reloads the four figures. **Invoices** and **Drugs** open the pages described below.
6. Shortcut cards	**Pharmacy Counter** (review and pick prescriptions), **New sale** (bill a prescription or walk-in customer) and **Inventory Control** (shelves, supplier invoice scanning and expiry, in Inventory).

9.2 Quick Guide

WHO USES THIS Everyone who uses the pharmacy

Quick Guide opens a short reminder of the pharmacy work in three parts: prescriptions and auto-fill, billing, and inventory controls. Press Esc or click the cross to close it.

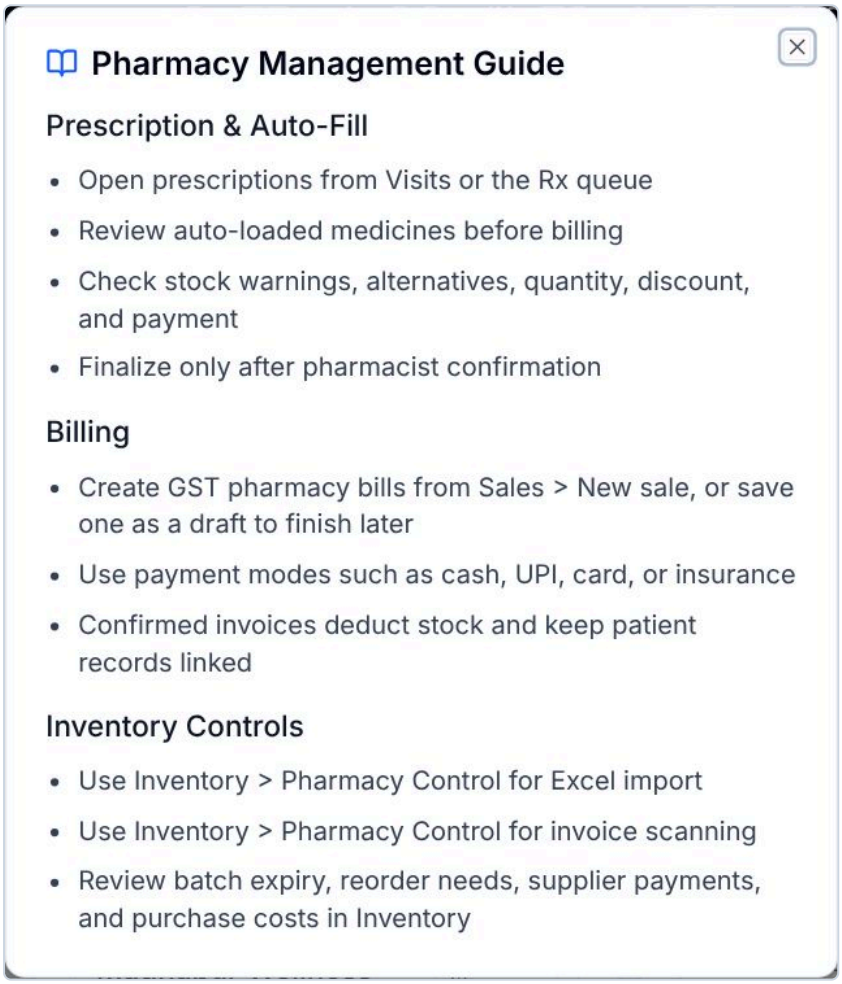

Figure 9.2. The Pharmacy Management Guide.

9.3 Look up and follow up pharmacy invoices

WHO USES THIS Pharmacists, admins

Click **Invoices** on the desk to open **Pharmacy Invoices**. It is a card list of bills with their items, useful for checking payment status and collecting balances. It opens on today's bills. For everyday searching and printing, the Sales page is quicker (see the Sales chapter).

The four boxes at the top total the bills in the list: **Total Invoices**, **Total Amount**, **Completed** (fully paid) and **Pending Amount** (bills not yet fully paid).

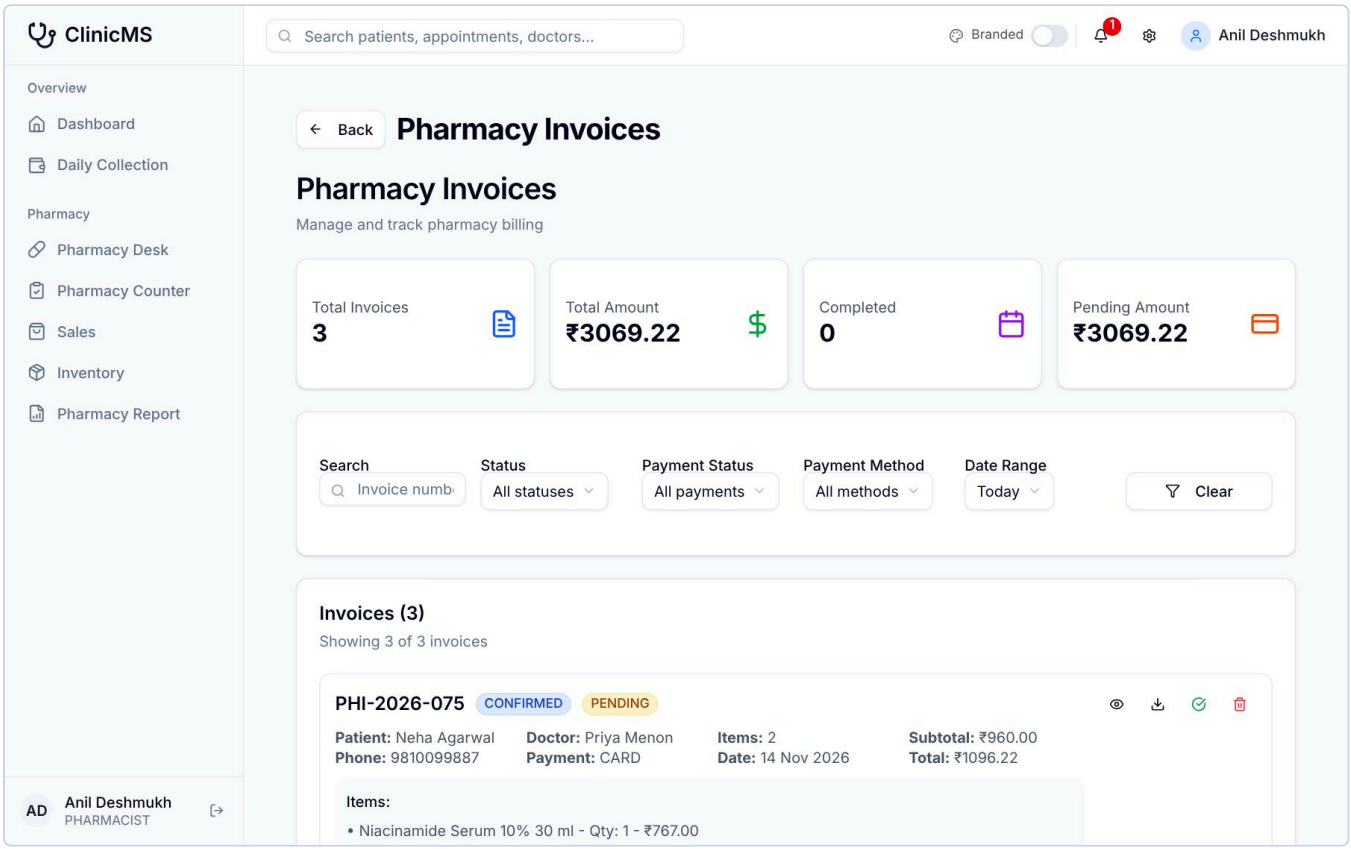

Figure 9.3. Pharmacy Invoices, opened from the desk.

ON THE SCREEN	WHAT IT MEANS
Search	Bill number or patient name.
Status	Draft, Pending, Confirmed, Dispensed, Completed or Cancelled.
Payment Status	Pending, Completed, Failed, Refunded or Partially Paid.
Payment Method	Cash, Card, UPI, Net Banking, Wallet or Insurance.
Date Range	All dates, Today, This Week, This Month or This Quarter.
Clear	Removes every filter and shows all dates.

Each bill card shows its number, a status badge and a payment badge, the patient, phone, doctor, payment mode, number of items, date, subtotal and total, then the list of items. The buttons at the right of a card:

> TIP
> **Eye (View Invoice)** opens the printable bill in a new browser tab. Allow pop-ups for the clinic's address if nothing opens.
>
> **Arrow (Download Invoice)** saves the bill as a PDF.
>
> **Green tick (Mark as Paid)** appears on finished bills that still owe money. It asks you to confirm the remaining amount, then records it in the bill's payment mode. If the network fails it shows **Retry Payment**; click it to finish the same payment without charging twice.
>
> **Arrow into Sales (Continue in Sales)** appears on drafts and opens the draft on the bill screen.
>
> **Red bin (Delete Invoice)** asks for confirmation and deletes a draft. A finished bill cannot be deleted; the app says so.
>
> **Back** at the top returns to the previous page.

9.4 Manage the drug list

WHO USES THIS Pharmacists, admins

Click **Drugs** on the desk to open **Drug Management**. This is the master list of medicines the pharmacy sells: the names the bill screen searches. Stock and batches are kept in Inventory; here you keep each medicine's details.

The boxes at the top count **Total Drugs**, **Categories**, **Manufacturers** and **Active Drugs**. Use **Search Drugs** (name or composition), **Category** and **Manufacturer** to narrow the list, and **Clear Filters** to reset it.

Each drug row shows the name, a red **Discontinued** or grey **Inactive** badge when it applies, the manufacturer, pack size, composition, strength, price and dosage form. The pencil opens the drug to edit it. The red bin deletes it after you confirm. **Previous** and **Next** page through long lists.

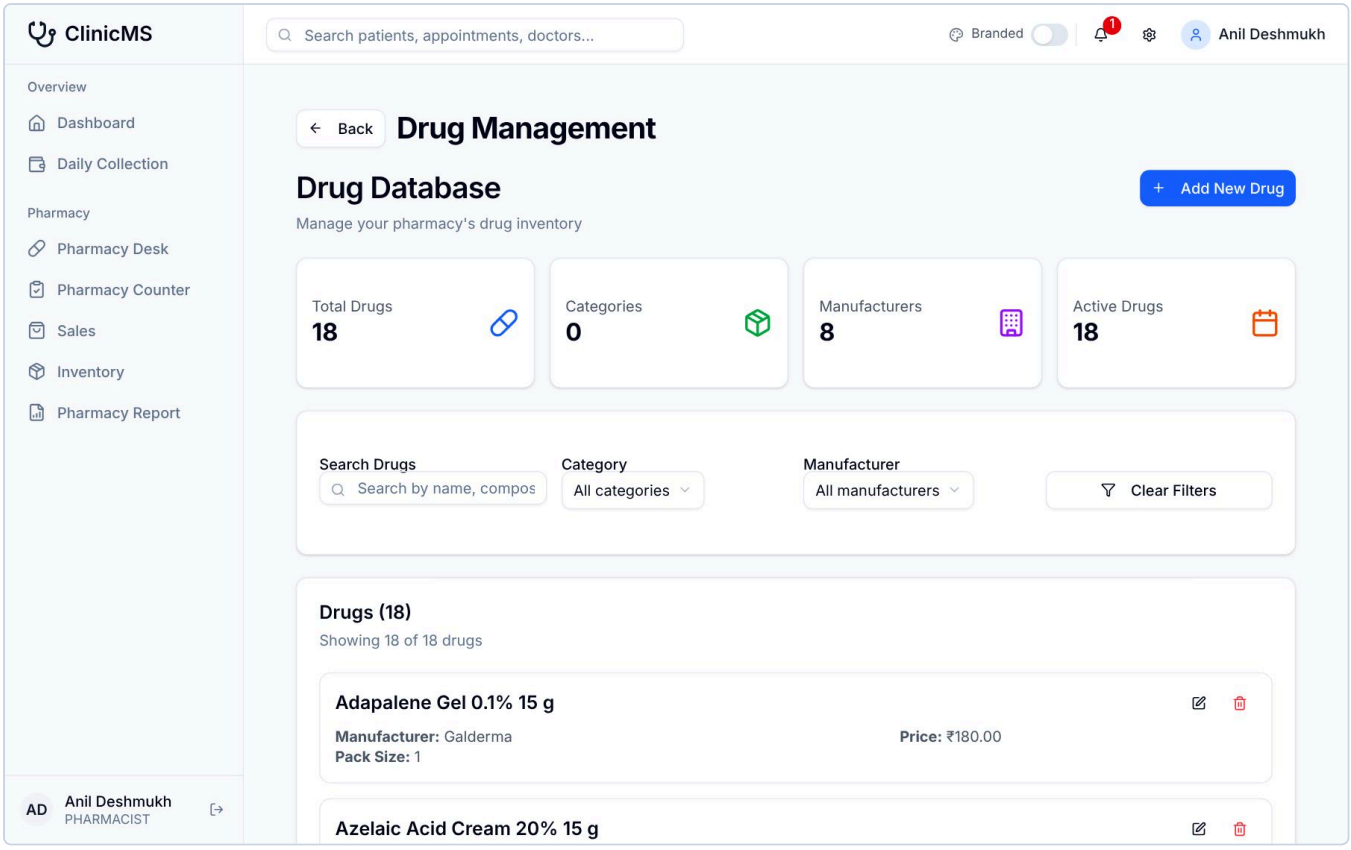

Figure 9.4. Drug Management, opened from the desk.

9.5 Add a new drug

WHO USES THIS Pharmacists, admins

Add a drug when the pharmacy starts stocking a medicine that is not in the list yet.

1. On Drug Management, click **Add New Drug**.
2. Fill in the **Drug Name**, **Price (₹)**, **Manufacturer**, **Pack Size**, **Primary Composition**, **Category**, **Dosage Form** and **Strength**. Fields marked * are required. Secondary Composition, Barcode and Description are optional.
3. Click **Add Drug** at the bottom of the window. When editing, the button reads **Update Drug**. The drug appears in the list and can be searched on the bill screen.

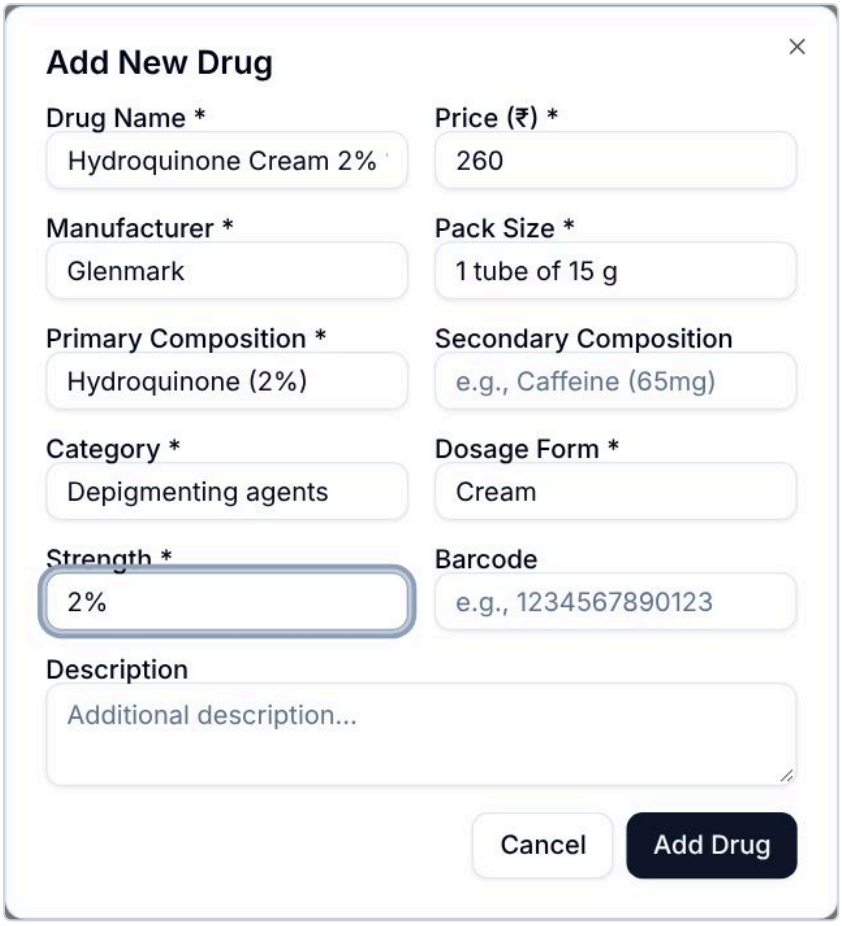

Figure 9.5. The Add New Drug window, filled in.

9.6 Ask the Pharmacy AI assistant

WHO USES THIS Pharmacists, admins

The assistant answers questions about the pharmacy in plain language and can prepare changes for you to approve. It stays closed until you need it: click **Open AI Assistant**. Your clinic must have an AI key set up for it to answer.

It can look up today's pharmacy figures, low stock, recent bills, the prescription queue, supplier purchase invoices, inventory reports and the drug list, and answer with text, a chart or a small report. You can attach a file, such as a photo of a supplier invoice, with the paperclip.

When a question needs a change (add or update a drug or a stock item, adjust stock, or draft, review and post a supplier invoice), the assistant does not change anything itself. It shows a proposal with what it would change. Click **Apply** to make the change or **Reject** to drop it. Applying needs the permission for that change.

Each conversation is saved as a chat. Start a new one, switch between **Active** chats, open the history, and archive or restore old chats.

1. Click **Open AI Assistant**.
2. Type your question in the box. Press Enter to send, or Shift and Enter for a new line.
3. Read the answer. If it shows a proposal, check it and click **Apply** or **Reject**.

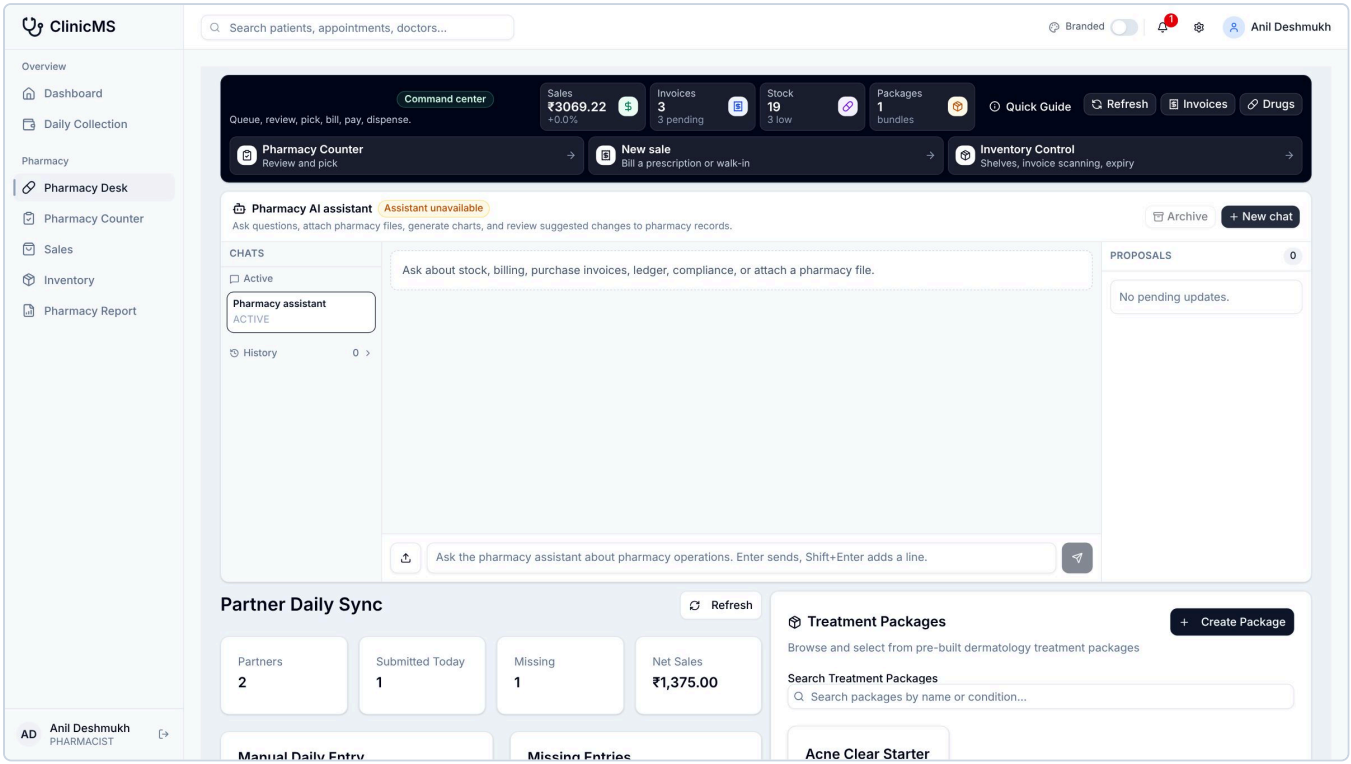

Figure 9.6. The Pharmacy AI assistant, open on the desk.

> **TIP**
> Always check a proposal before you apply it. An applied change is the same as making it by hand.

9.7 Enter a partner pharmacy's daily sales

WHO USES THIS Pharmacists, admins

Some clinics supply partner pharmacies, which report what they sold each day. **Partner Daily Sync** records those reports and takes the sold quantities out of the clinic's stock. Each partner sends one report per day.

1. Under **Manual Daily Entry**, check the **Date**.
2. Type the partner's **Organization Name**. A new name creates the partner; **Organization ID** is only needed if you know it. **Submitted By** is the person who sent the report.
3. For each medicine sold, fill in **Medicine**, **Batch**, **Qty**, **MRP**, **Discount** (in rupees) and **Payment** (Cash, Card, UPI or BNPL, buy now pay later). Click **Add Item** for another line, or the bin to remove one.
4. Check **Form total** and click **Submit**.
5. In **Recent Submissions**, click **Commit** on the report to take its quantities out of stock. The button then reads **Committed**.

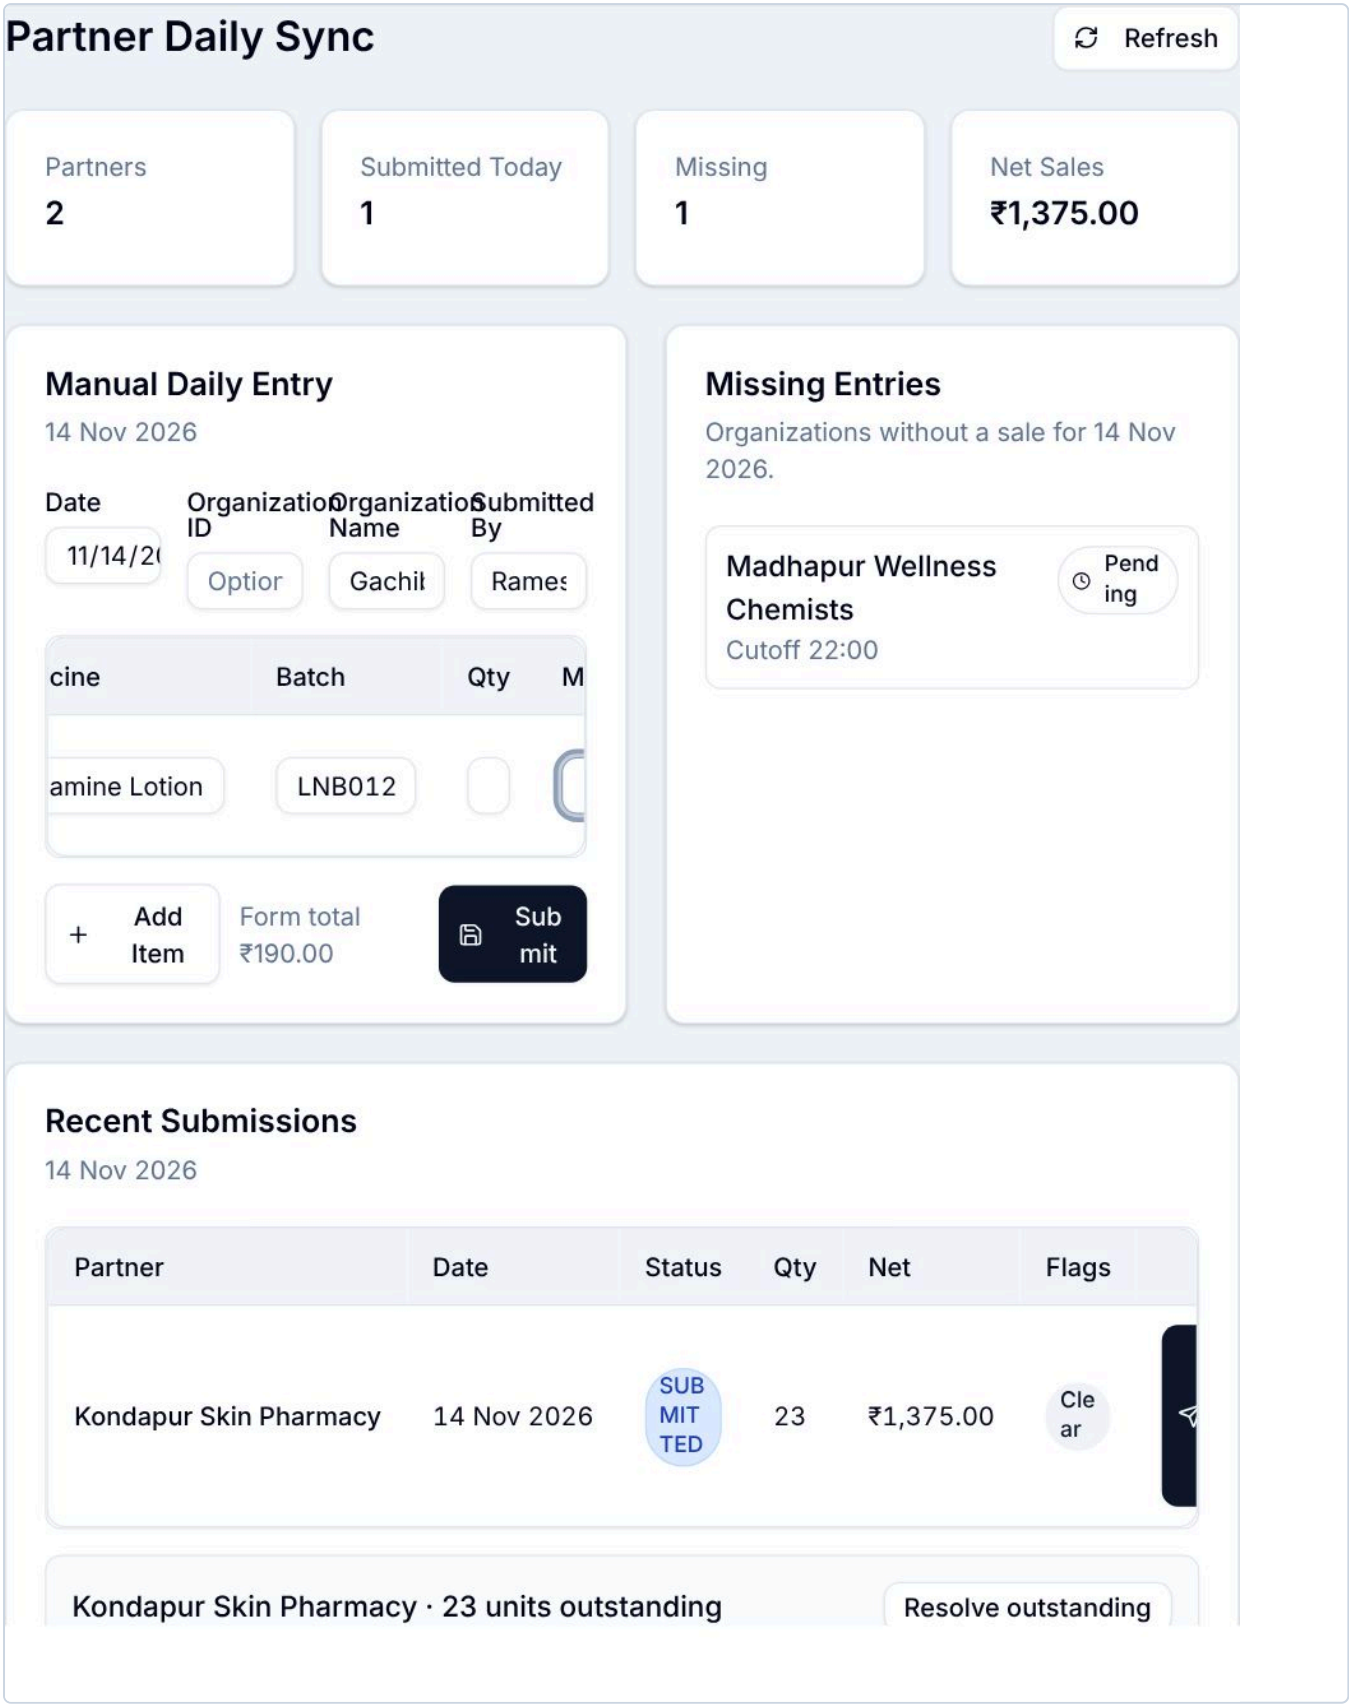

Figure 9.7. Partner Daily Sync with a report being entered and one partner missing.

Figure 9.8. Recent Submissions after Commit: the stock for today's report is taken out.

IN MISSING ENTRIES AND RECENT SUBMISSIONS	MEANING
Partners	How many partner organisations the clinic has.
Submitted Today	How many have sent today's report.
Missing	How many have not sent it yet.
Net Sales	Today's total of the reports, after discounts.
Refresh	Reloads the figures and lists.

Missing Entries lists the partners with no report for the chosen date. Each shows its cutoff time (22:00 unless set otherwise) and a badge: **Pending** before the cutoff, red **Late** after it.

Recent Submissions lists the reports for the date with the partner, date, status, quantity and net amount. The status reads SUBMITTED, STOCK COMMITTED, PARTIAL STOCK COMMITTED, RECONCILIATION REQUIRED or CANCELLED. The **Flags** column shows **Late** (sent after the cutoff), red **Discrepancy** (something did not match stock) or **Clear**.

If some units could not be taken out of stock (the batch was not found or stock was short), the button reads **Retry outstanding** and a box below shows the units outstanding. Click **Resolve outstanding**, choose the right stocked batch for each medicine with a reason (matching does not move stock), then click **Retry these outstanding units**.

> **TAKE CARE**
> Commit takes the reported quantities out of the clinic's stock.

9.8 Browse treatment packages

WHO USES THIS Pharmacists, doctors

A treatment package is a bundle of medicines for one condition, sold at one package price, for example an eight-week acne kit. **Treatment Packages** on the desk lists the clinic's dermatology packages. Type in **Search Treatment Packages** to find one by name, description or condition.

Each card shows the name and description, the subcategory, **Public** or **Private**, the original price struck through, the package price, the saving as **% OFF**, the number of items, the duration and the doctor who made it. **View Details** opens everything: category, duration, prices, savings, each medicine with its quantity, dosage, frequency, duration and instructions, what it is for and when not to use it.

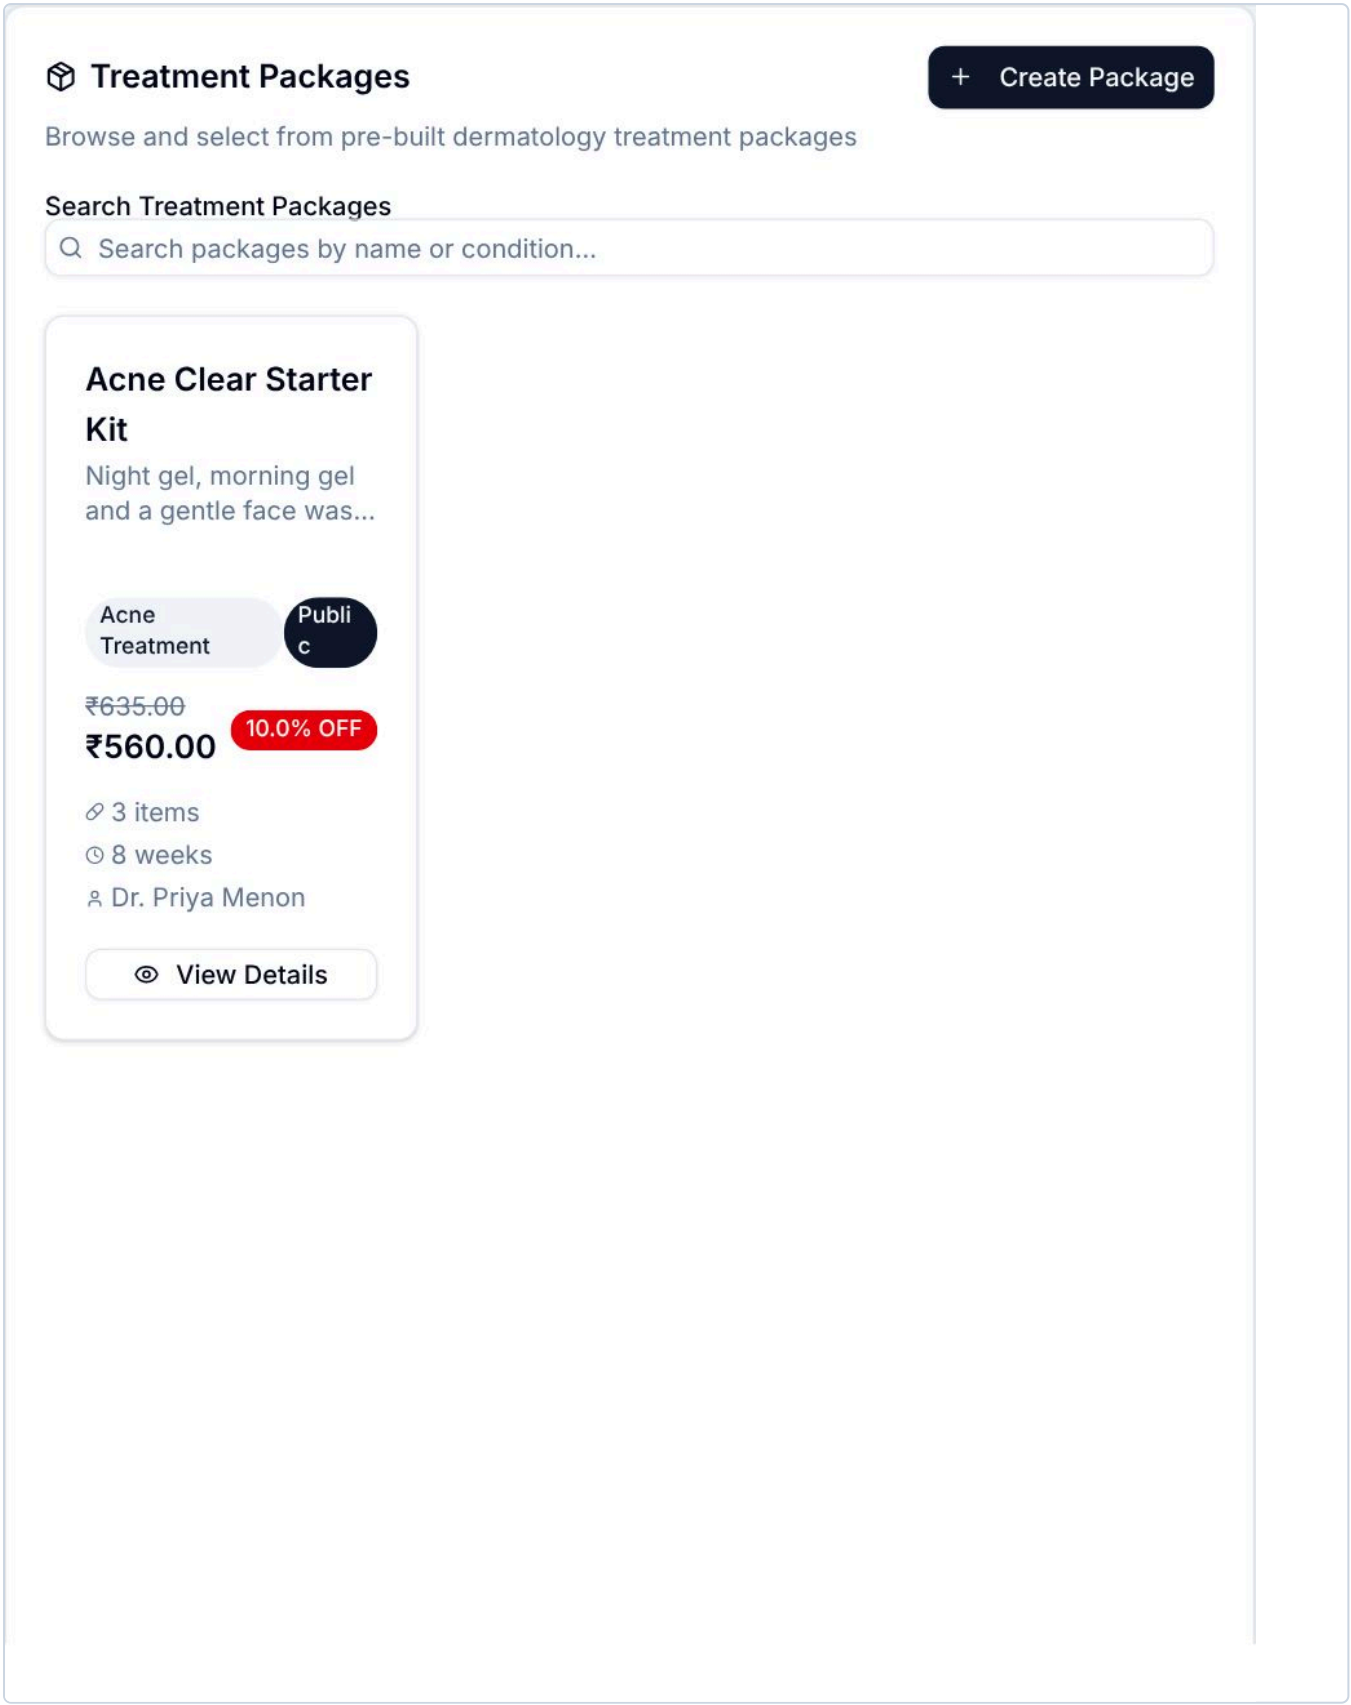

Figure 9.9. Treatment Packages on the desk.

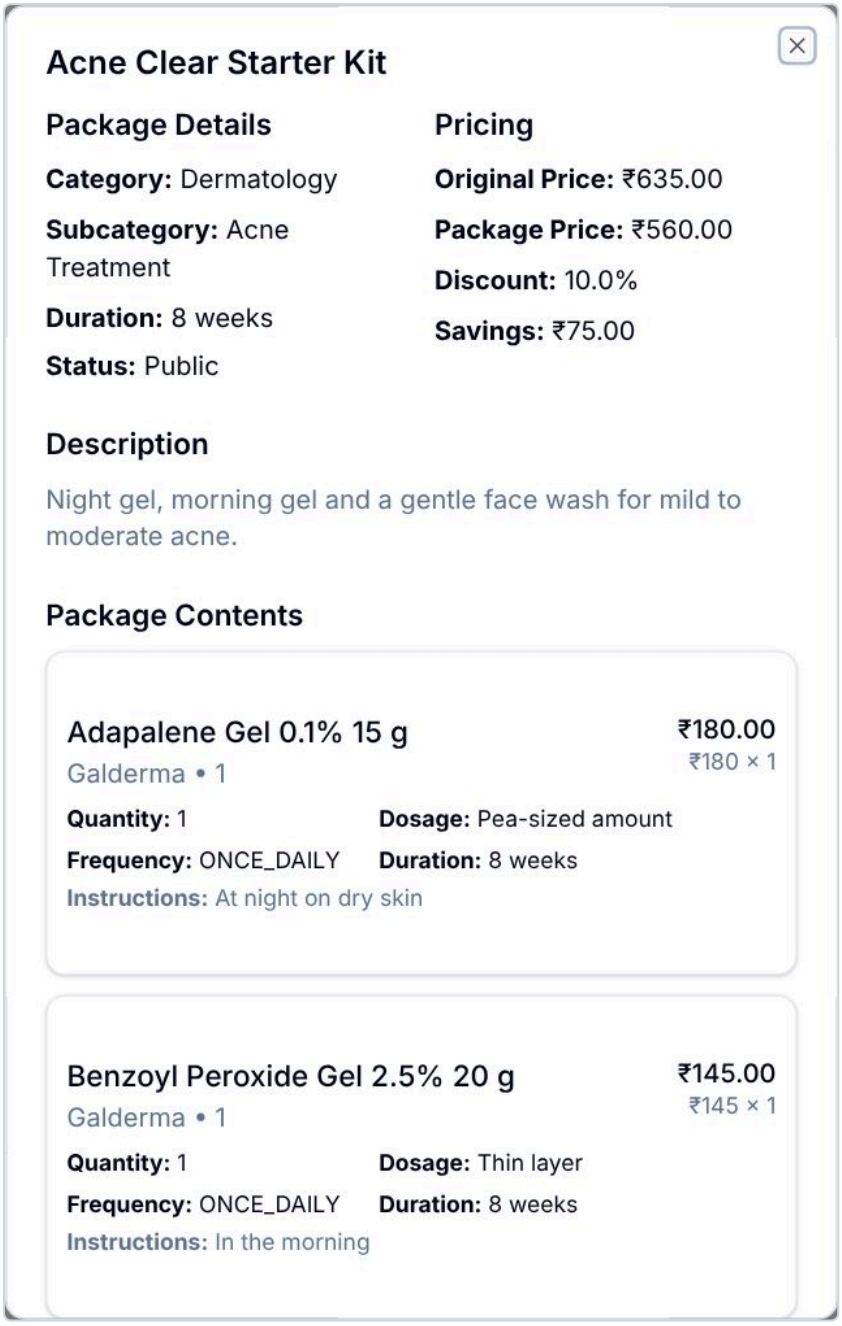

Figure 9.10. View Details of a package.

9.9 Create a treatment package

WHO USES THIS Pharmacists, doctors

1. Click **Create Package**.
2. Type the **Name**, choose the **Category** (Dermatology or General) and optionally a **Subcategory**.
3. Type the **Package Price (₹)**, and optionally a **Discount %** and **Duration**.
4. Add a **Description**, **Indications** (what it is for) and **Contraindications** (when not to use it) if you wish.

5. Under **Add drugs**, search for each medicine and click **Add**. For each one set **Qty**, **Dosage**, **Pattern** (such as 0-1-0), **Frequency** and **Duration**. The bin removes a medicine.
6. Check **Original price (auto)**, the total of the medicines at their normal prices, and **Computed discount %**.
7. Click **Create Package**. **Cancel** closes the window without saving.

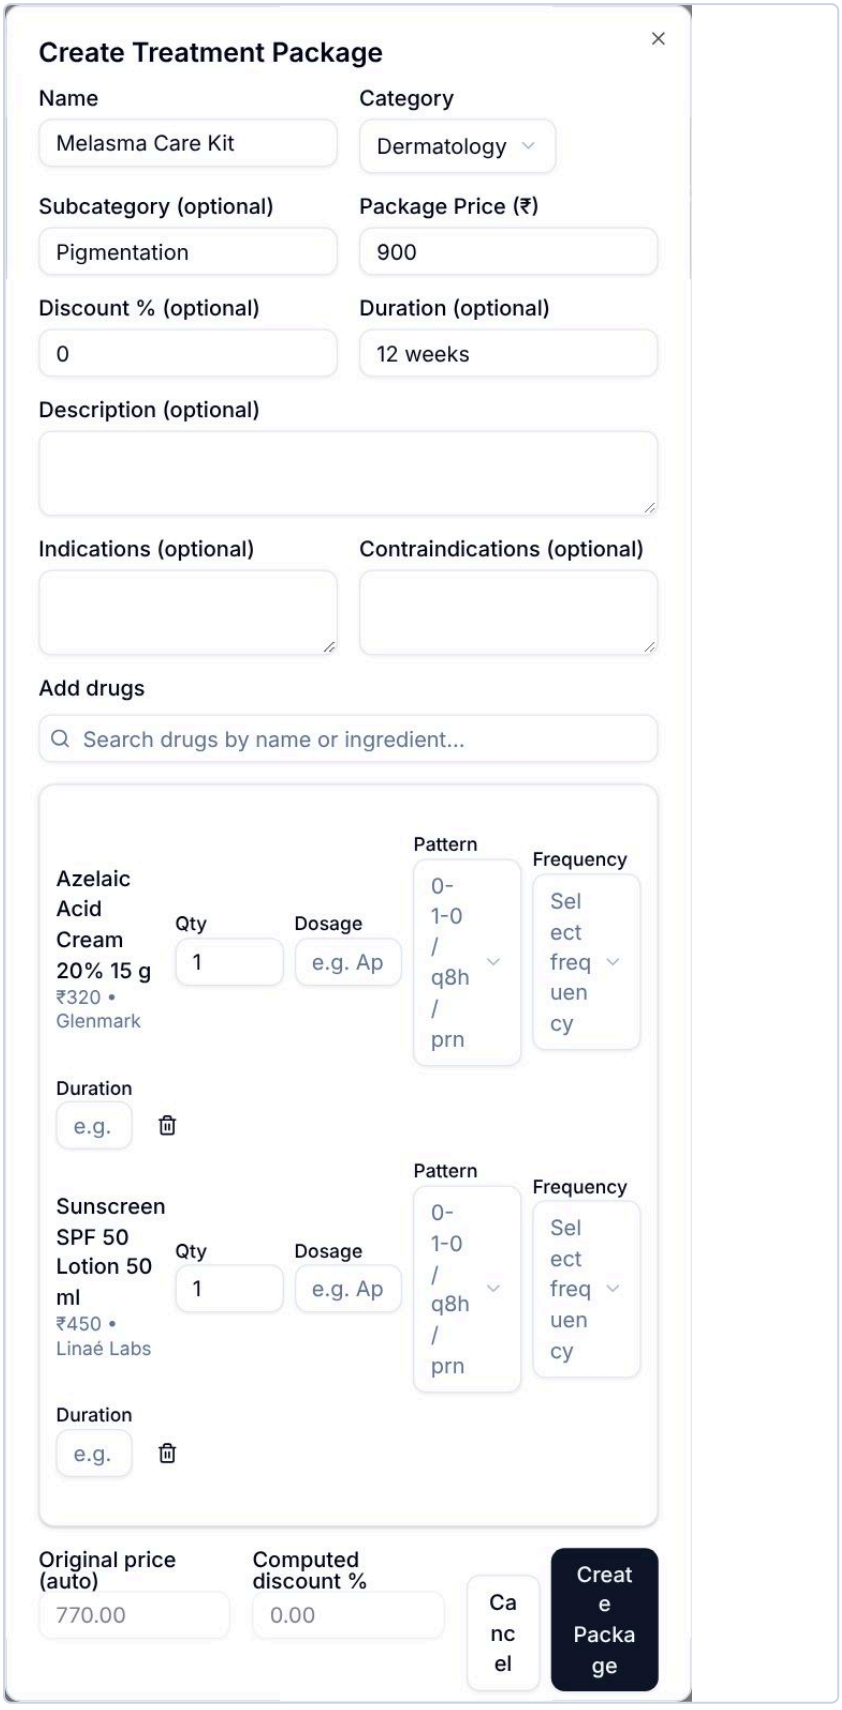

Figure 9.11. The Create Treatment Package window, filled in.

9.10 Sell a package on a bill

WHO USES THIS Pharmacists

Packages are sold from the bill screen. The package goes on the bill as one line at the package price.

1. Start a **New sale** and choose the patient.
2. Click the **Treatment Packages** tab next to Individual Drugs.
3. Click **Add** on the package. It appears under Invoice Items with a PACKAGE label.
4. Finish the bill as usual (see the Sales chapter).

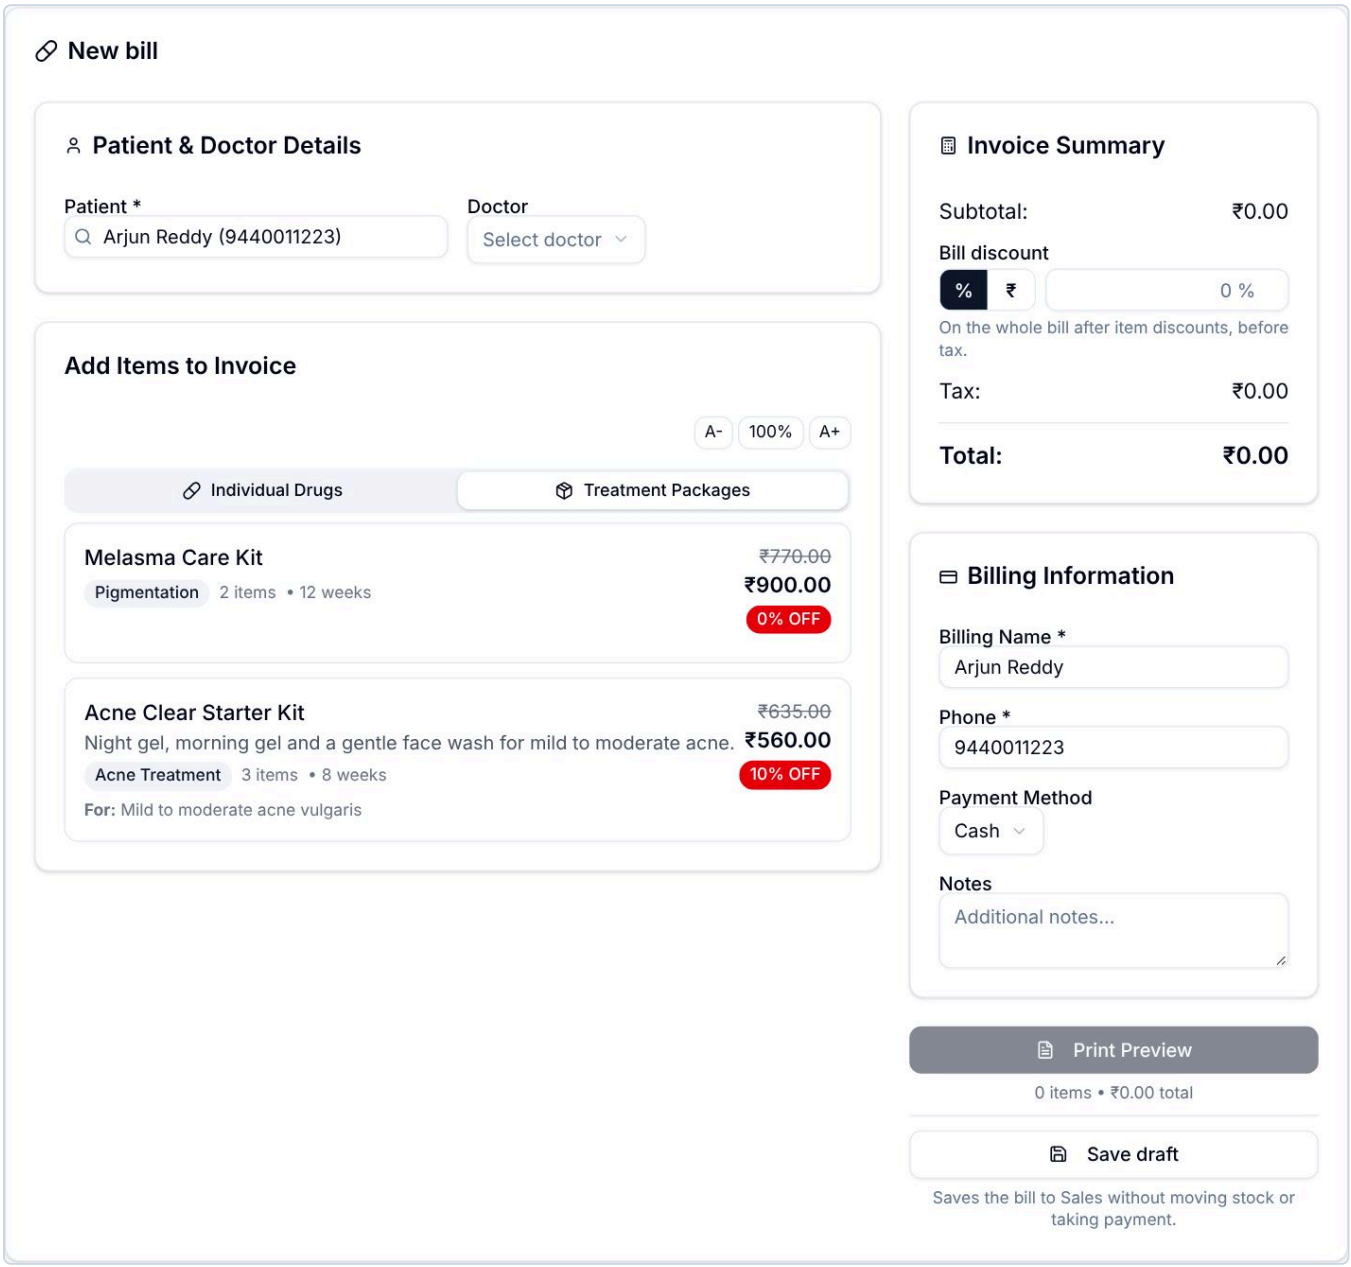

Figure 9.12. The Treatment Packages tab on a new bill, with a package added.

CHAPTER 10

Pharmacy Counter

The Pharmacy Counter is the pharmacist's workstation for prescriptions. It takes a prescription from the queue, through checking each medicine against stock, to the bill and the hand-over. Pharmacists use it most; doctors, reception and admins can open it too.

10.1 The parts of the counter

WHO USES THIS Pharmacists

Open **Pharmacy Counter** from the menu, or click the **Pharmacy Counter** card on the Pharmacy Desk. The screen has a dark strip at the top and three panels that follow the work from left to right: **Queue**, **Active Dispense** and **Pick + Pay**. The full **Prescription Queue** table is further down the page.

The counter is widest on a large screen. On a smaller screen some columns of the medicine list are cut off on the right; zoom the browser out (Ctrl and minus) to see them.

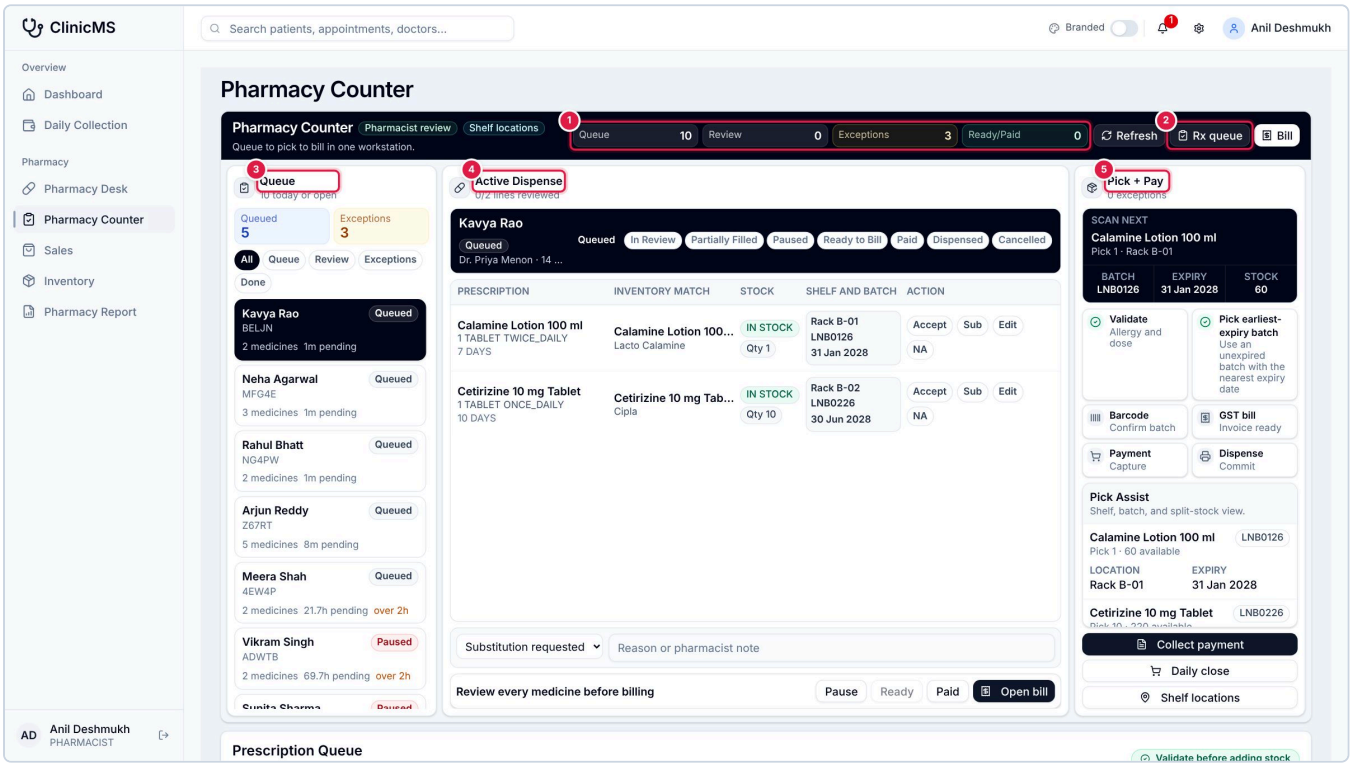

Figure 10.1. The Pharmacy Counter, with its parts numbered.

ON THE SCREEN	WHAT IT MEANS
1. Counters	**Queue**: prescriptions from today or still open. **Review**: being checked now. **Exceptions**: paused, part-filled, cancelled or expired. **Ready/Paid**: ready to bill or already paid.
2. Refresh, Rx queue, Bill	**Refresh** reloads the queue and rechecks stock. **Rx queue** is a shortcut to the queue; the same list is the Prescription Queue table lower down. **Bill** opens a new bill for the selected prescription.
3. Queue	The prescriptions waiting, newest first. Click one to start on it.
4. Active Dispense	The selected prescription, medicine by medicine, with the stock found for each.
5. Pick + Pay	What to take from the shelf next, a checklist from checking to dispensing, and the buttons to bill.

> **TIP**
> The two labels under the title, **Pharmacist review** and **Shelf locations**, name the two ways the counter helps you: every medicine is checked by a pharmacist before billing, and Pick + Pay shows the shelf where each batch is kept.

10.2 Read the queue

WHO USES THIS Pharmacists

Each card in the Queue is one prescription. The two boxes at the top count the **Queued** prescriptions (waiting, in review or ready to bill) and the **Exceptions**. The round buttons filter the list.

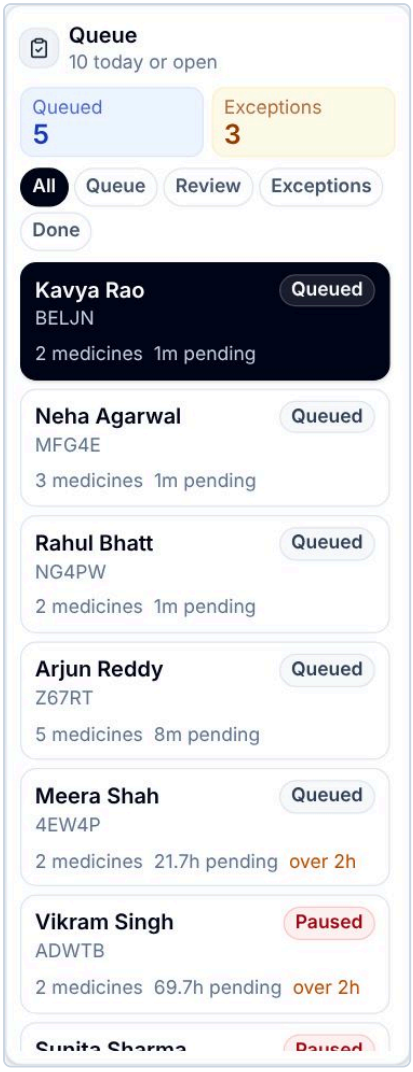

Figure 10.2. The Queue: today's prescriptions are Queued; older unbilled ones show Paused and over 2h.

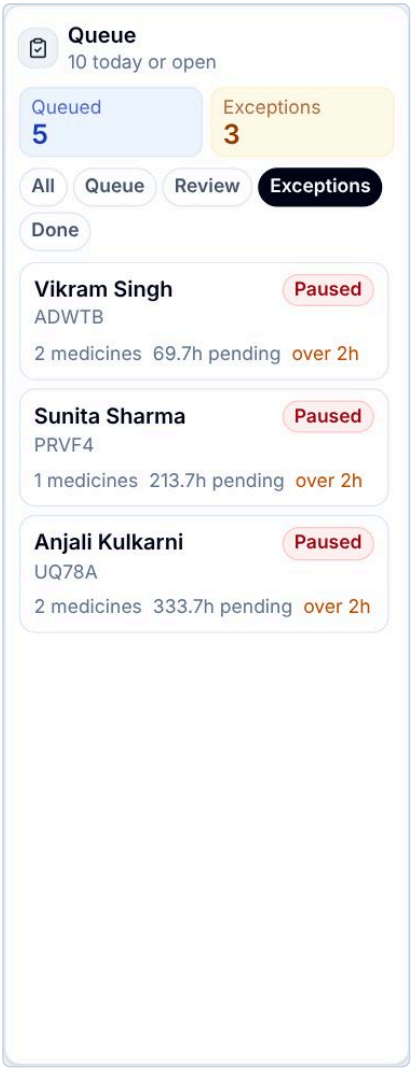

Figure 10.3. The Exceptions filter.

ON THE CARD OR TAB	MEANING
All / Queue / Review / Exceptions / Done	Filters. **Queue**: not started. **Review**: being checked or ready to bill. **Exceptions**: paused, part-filled, cancelled or expired. **Done**: paid or dispensed.
Name and code	The patient and their patient code.
Queued	Waiting. Nobody has opened it yet.
Review	A pharmacist has opened it and is checking the medicines.
Bill	Every medicine is checked; it is ready to bill.
Paid	Marked as paid.
Done	Fully billed and dispensed.
Partial	Some medicines were billed, some are still to give.

Paused	Red. Put on hold by a pharmacist, or more than 24 hours old with nothing billed, or past its validity.
Cancelled	Cancelled at the counter.
N medicines	How many medicines are on the prescription.
12m pending / 3.5h pending	How long since the doctor wrote it, in minutes under an hour and hours after that.
over 2h	Amber. The patient has been waiting more than two hours.

When no prescription is waiting, the Queue shows **No prescriptions waiting** with three buttons. **Walk-in bill** opens a new bill for a customer without a prescription. **Pull visits** reloads the queue to pick up prescriptions doctors have just saved. **Inventory control** opens the shelf settings in Inventory.

10.3 Review every medicine

WHO USES THIS Pharmacists

Click a card to start. The prescription moves to **In Review** and its medicines appear in Active Dispense. The dark bar shows the patient, doctor, date and a row of steps: Queued, In Review, Partially Filled, Paused, Ready to Bill, Paid, Dispensed and Cancelled. The current step is filled in.

Each medicine row shows what the doctor prescribed, the product in stock the app matched it to, the stock, and the shelf, batch and expiry to pick from. Mark each medicine with one of four buttons.

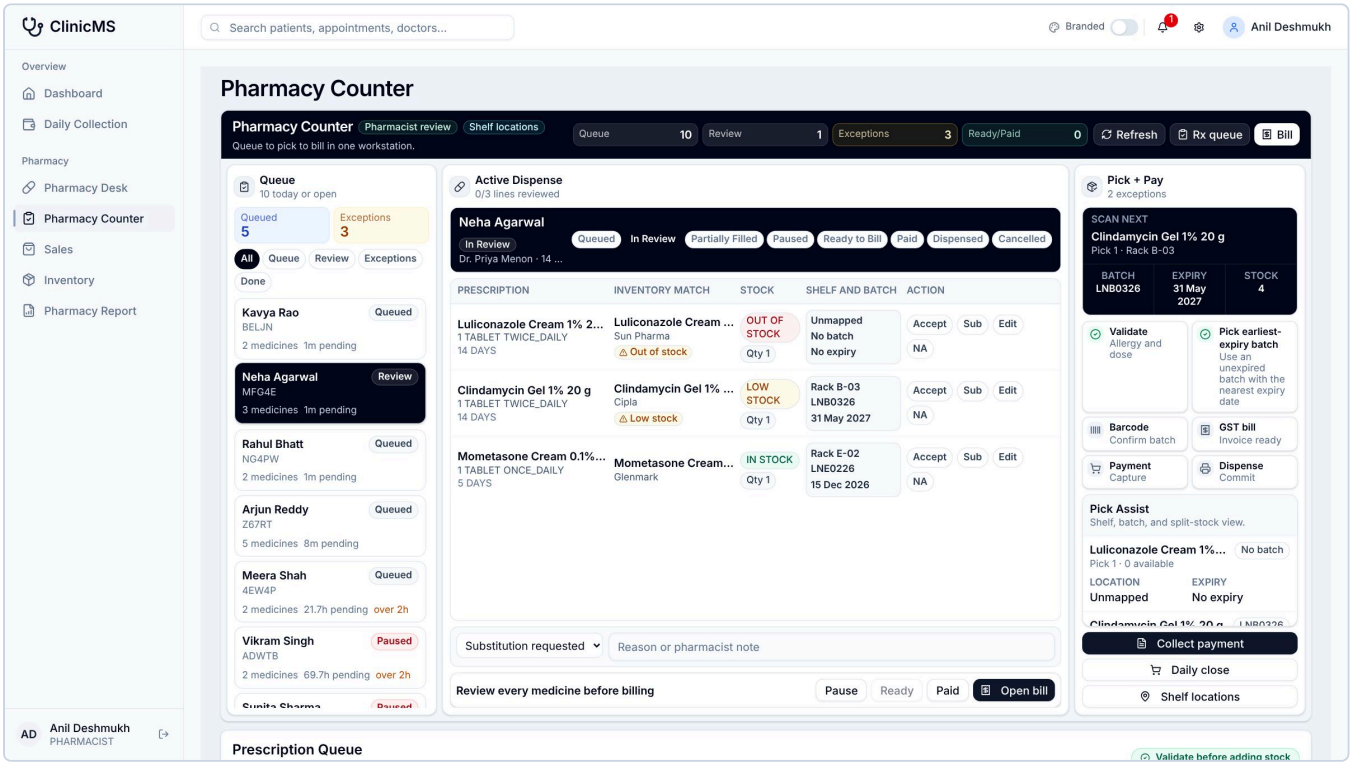

Figure 10.4. A prescription with problems: one cream out of stock, one gel low, one batch near expiry.

BUTTON OR LABEL	MEANING
Accept	Give the medicine as prescribed.
Sub	Give a substitute. Choose a reason and note it below.
Edit	Give it with a change, such as a different quantity.
NA	Not available. A medicine marked NA blocks **Ready** until it is resolved.
Inventory Match	The stock product found for the prescribed name, with its maker. **No inventory match** means none was found; link it from the Prescription Queue table below.
IN STOCK / LOW STOCK / OUT OF STOCK / UNMATCHED	Stock of the matched product. **Qty** is the quantity still to give.
Warnings	**Low stock**, **Out of stock**, **Near expiry**, **No match**, or **Expired batch blocked** (an expired batch is on the shelf and will not be sold).
Shelf and batch	The rack, batch number and expiry of the batch to pick, or **Unmapped**, **No batch**, **No expiry**.
Reason list and note	The reason for a substitution, change, pause or cancellation: Substitution requested, Quantity changed, Medicine unavailable, Paused for doctor clarification, Cancelled at counter or Stock correction needed. Add your own words in **Reason or pharmacist note**. Choose them before clicking Sub, Edit, NA or Pause; they are saved with that action.

10.4 Pause a prescription

WHO USES THIS Pharmacists

Pause when you cannot finish now, for example a medicine is out of stock and you need the doctor to choose another. The prescription moves to the **Exceptions** filter with a red **Paused** badge until someone picks it up again.

1. Choose the reason in the list, for example **Medicine unavailable**.
2. Type a note in **Reason or pharmacist note**.
3. Click **NA** on the medicine that is not available.
4. Click **Pause**.

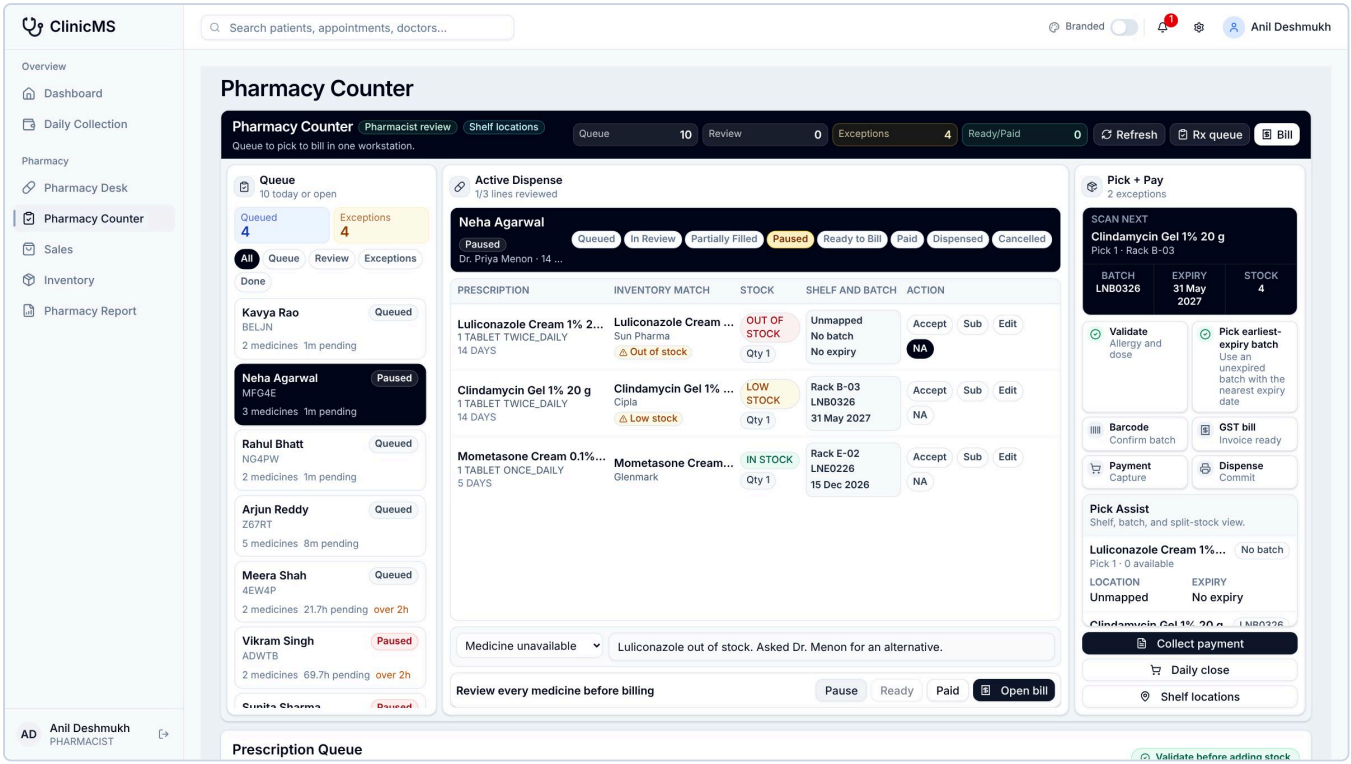

Figure 10.5. The cream marked NA with a reason, and the prescription paused.

10.5 Take a prescription from queue to paid and dispensed

WHO USES THIS Pharmacists

This is the everyday flow. Rahul Bhatt's prescription has a gel and a course of capsules, both in stock.

1. Click the patient's card in the Queue. It moves to **In Review**.
2. Check each medicine against the prescription and click **Accept** (or Sub or Edit). The count under Active Dispense shows how many lines are reviewed, for example 2/2.
3. When every medicine is reviewed, the bottom bar reads **Ready for billing review**. Click **Ready**. The step moves to **Ready to Bill** and the card shows **Bill**.
4. Pick the medicines. **Scan next** in Pick + Pay shows the medicine to pick, how many, and its shelf, batch, expiry and stock. **Pick Assist** lists every medicine the same way, and says when other batches are available if the shelf is short.
5. Click **Open bill** (or **Collect payment**, or **Bill** in the top strip). A new bill opens with the prescription loaded.
6. Choose the payment method, click **Print Preview**, then **Confirm Invoice**. See the Sales chapter for the details.
7. Go back to the Pharmacy Counter. The card now shows **Done** and the step is **Dispensed**. Hand the medicines over.

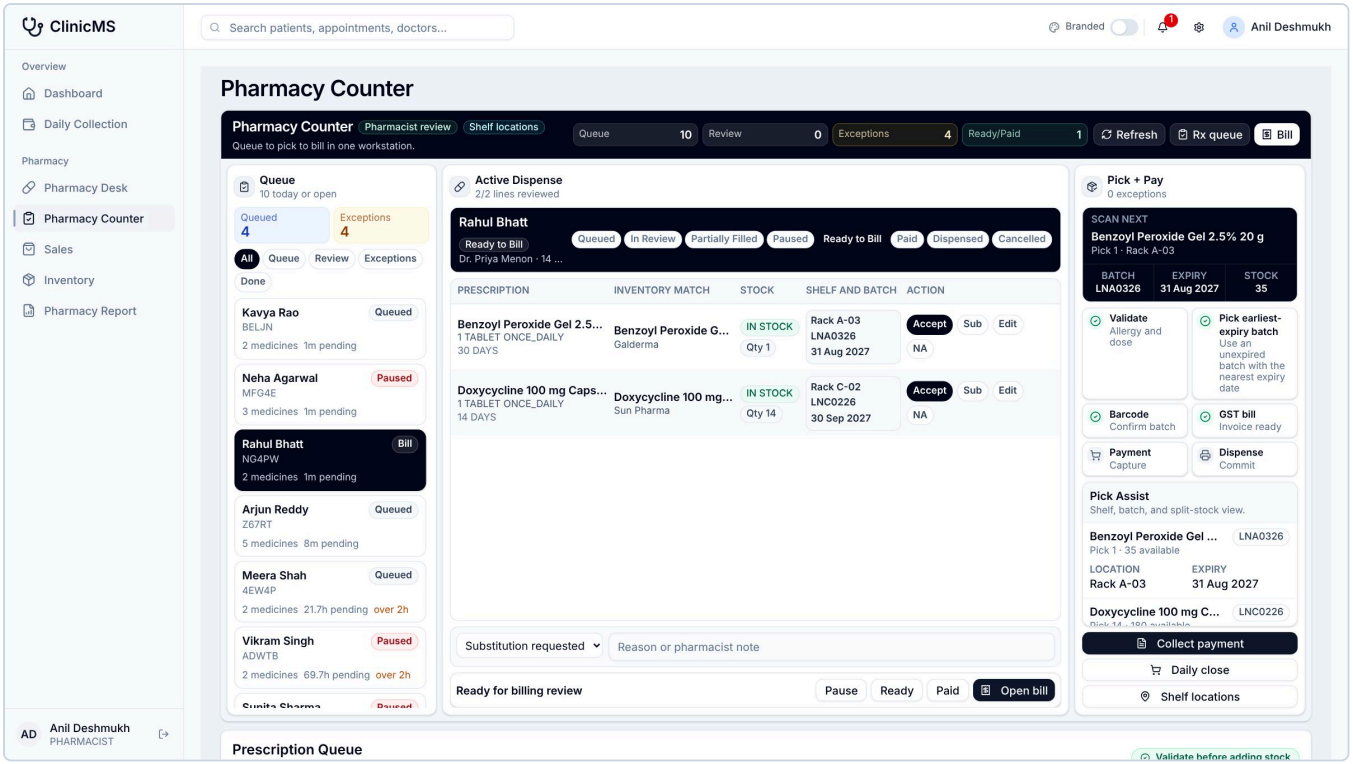

Figure 10.6. Both medicines accepted: Ready for billing review.

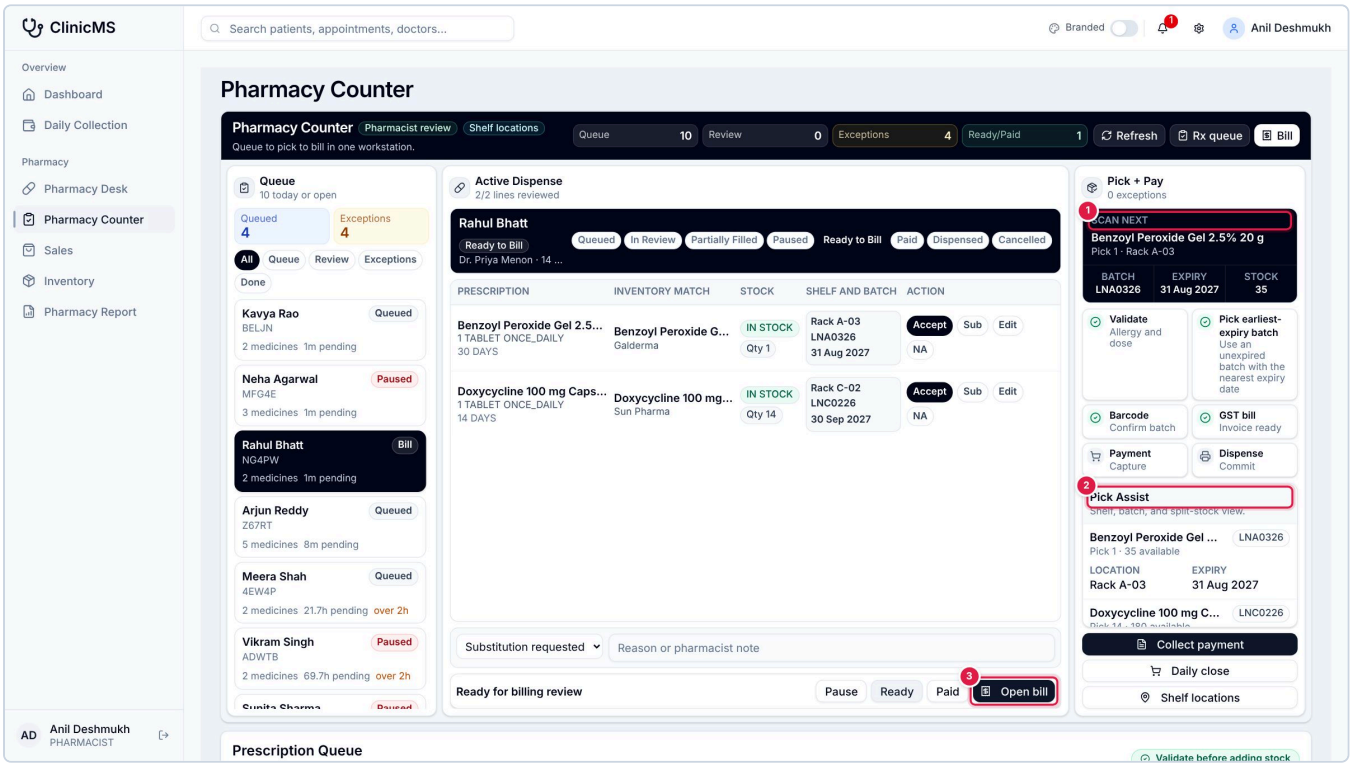

Figure 10.7. After Ready: the step is Ready to Bill and Pick + Pay shows what to pick and where.

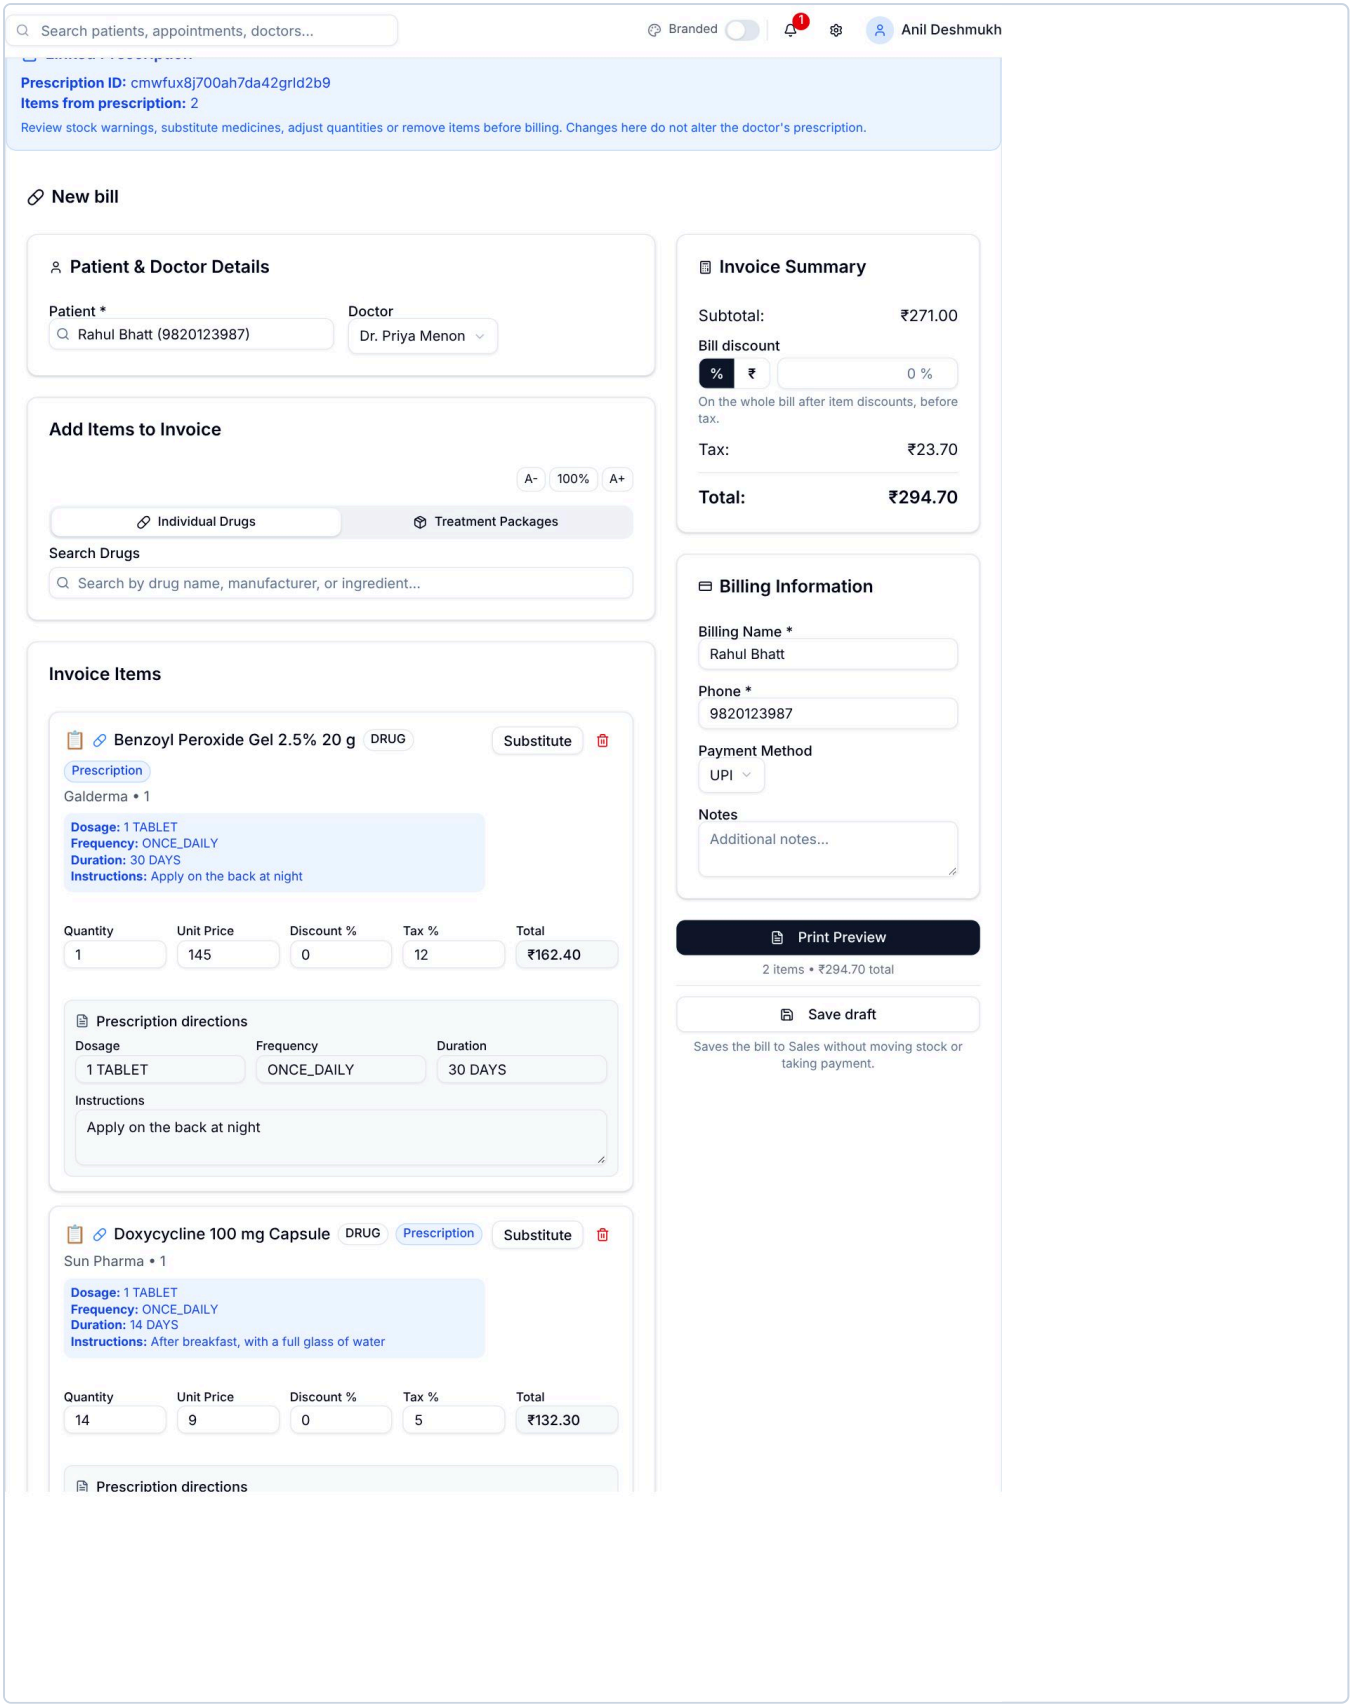

Figure 10.8. Open bill loads the prescription into a new bill.

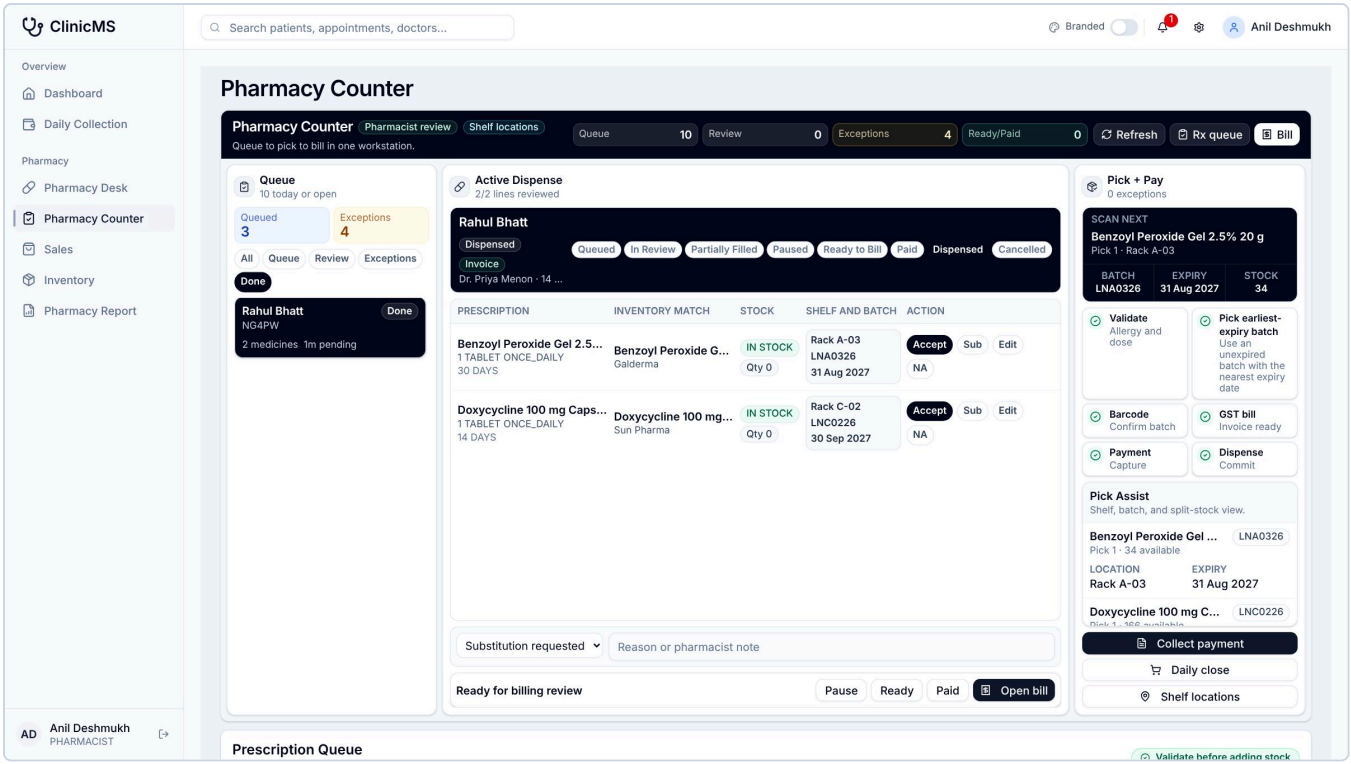

Figure 10.9. Back at the counter: the prescription is Dispensed and every step of the checklist is ticked.

PICK + PAY CHECKLIST	TICKED WHEN
Validate (allergy and dose)	A prescription is selected. Check the patient's allergies and the doses.
Pick earliest-expiry batch	A batch was found. Pick the unexpired batch with the nearest expiry date.
Barcode (confirm batch)	Every medicine is reviewed.
GST bill (invoice ready)	The prescription is Ready to Bill, Paid or Dispensed.
Payment (capture)	Paid or Dispensed.
Dispense (commit)	Dispensed: the bill covers every medicine.

The **Paid** button marks the prescription as paid without making a bill here, for example when the bill was made separately. A prescription that is fully billed becomes Dispensed by itself.

When a prescription is billed only in part, its card shows **Partial** and it stays in Exceptions until the rest is billed.

> **TAKE CARE**
> Confirming the bill takes the medicines out of stock and records the payment.

10.6 Daily close and shelf locations

WHO USES THIS Pharmacists

Two buttons at the bottom of Pick + Pay lead elsewhere. **Daily close** opens the Pharmacy Desk, where partner pharmacies' daily sales are entered (see *Partner Daily Sync* in the Pharmacy Desk chapter). **Shelf locations** opens Inventory, Pharmacy Control, where each medicine's rack is set. The rack you set there is what the counter shows under Shelf and batch and in Pick Assist.

10.7 The Prescription Queue table

WHO USES THIS Pharmacists

Below the three panels, the **Prescription Queue** table lists the same prescriptions with more detail and lets you bill them directly. It works the same way as the queue on the New sale screen (see *Bill a prescription from the queue* in the Sales chapter); here the button on each row is **Bill** instead of Load. The green label **Validate before adding stock** is a reminder to check every medicine before billing.

Use the status list at the top right to show **Pending**, **Partial**, **Dispensed**, **Expired** or **All** prescriptions. In the Stock column, **Link item** or **Change link** tells the app which product in stock a prescribed medicine is.

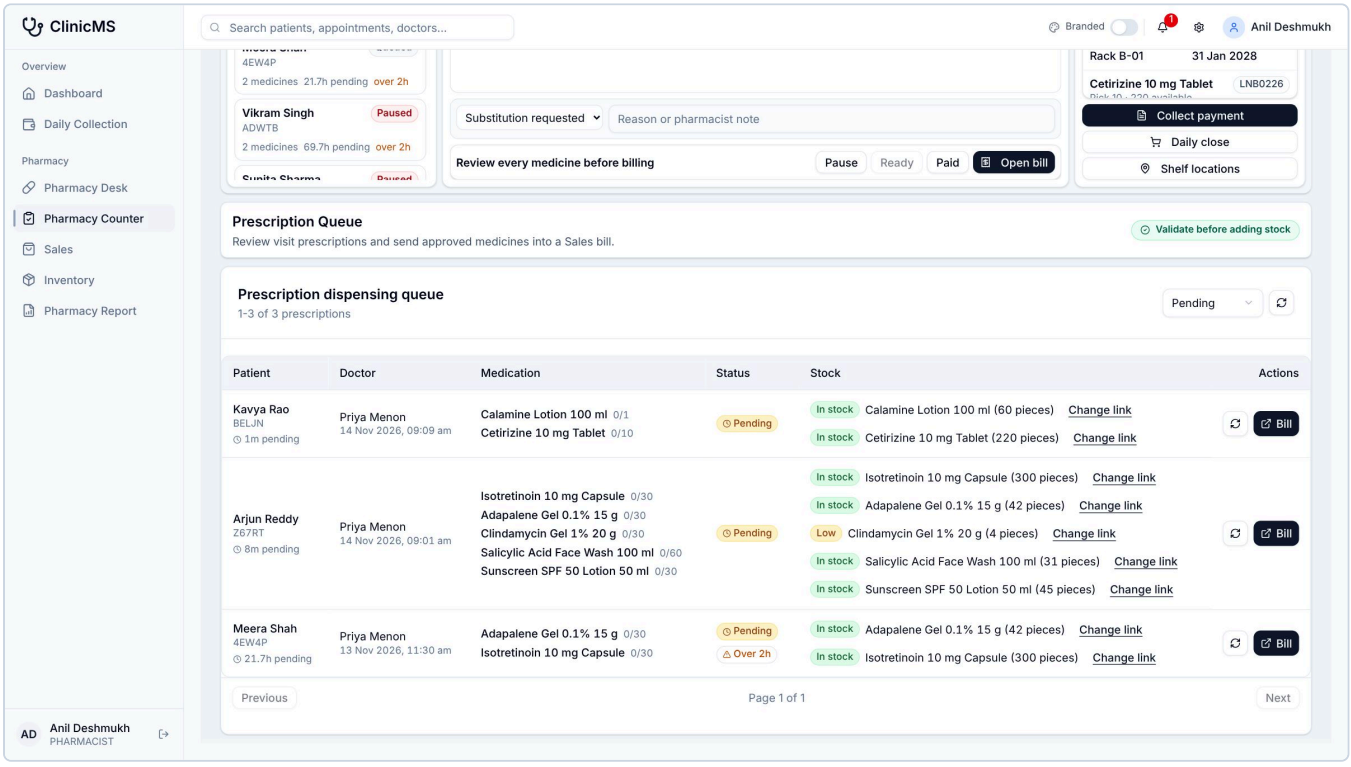

Figure 10.10. The Prescription Queue table under the counter.

CHAPTER 11

Sales

The Sales page is the pharmacy's bill book. Every pharmacy bill, draft bill and customer return is listed here, and **New sale** opens the screen where you bill medicines to a patient. Pharmacists use it all day. Doctors, admins and owners can open it too.

11.1 Find your way around the Sales list

WHO USES THIS Pharmacists, admins

Open **Sales** from the menu. The list shows the bills of the current financial year, newest first. Two tabs at the top switch between **Sales** (bills) and **Returns** (money and medicines given back). The button beside the tabs starts a **New sale**, or a **New return** when the Returns tab is open.

Click a bill number, or anywhere on a row, to open that bill.

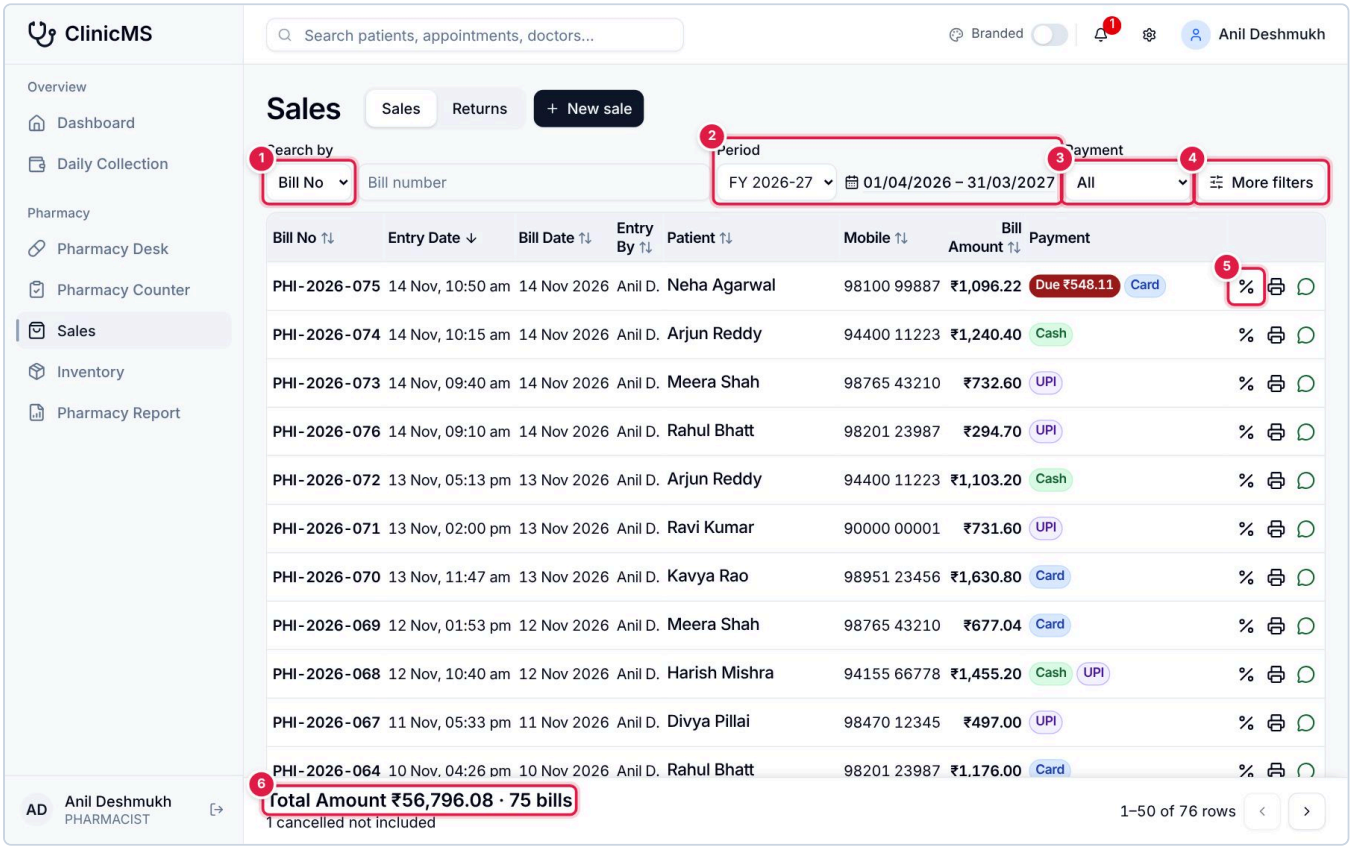

Figure 11.1. The Sales list with its search, filters, row actions and totals.

ON THE SCREEN	WHAT IT MEANS
1. Search by	Choose what to search: **Bill No**, **Patient** name or **Mobile** number. Then type in the box beside it. The list updates as you type.
2. Period	The dates the list covers. See *Choose the period* below.

3. Payment	Shows only bills paid by one mode, or only bills with money still due. See *Filter by payment*.
4. More filters	Filters by state, source and the person who made the entry. A number on the button shows how many of these filters are on.
5. Row actions	Edit discount, Print and Send on WhatsApp for that bill. See *Row actions*.
6. Totals line	The total of the bills in the list and how many there are. Drafts and cancelled bills are not counted; a note under the total says how many were left out. The arrows on the right move between pages of 50 rows.

The columns are **Bill No**, **Entry Date** (when the bill was saved), **Bill Date**, **Entry By** (who saved it), **Patient**, **Mobile**, **Bill Amount** and **Payment**. Click a column heading to sort by it. Click it again to reverse the order. The small arrow shows the column the list is sorted by.

11.2 Read the badges on a bill row

WHO USES THIS Pharmacists, admins

Coloured badges in the **Bill No** and **Payment** columns tell you the state of each bill at a glance.

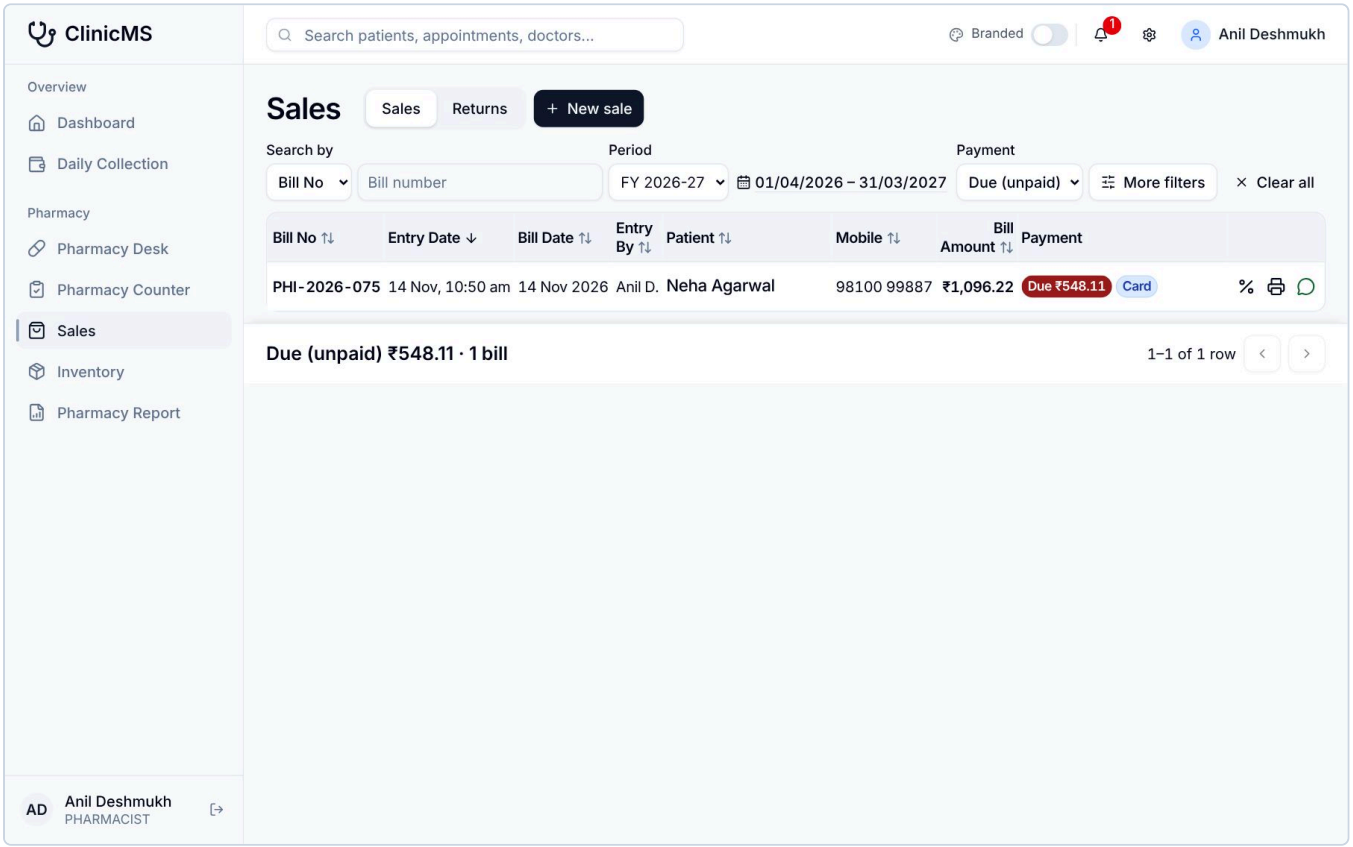

Figure 11.2. Bills with money still due, chosen with Payment: Due (unpaid). The totals line now shows the amount still to collect.

BADGE	MEANING
Cash, UPI, Card, Net banking, Wallet, Insurance	How the bill was paid. A bill paid in two ways shows two badges.
Due ₹...	Red. The patient still owes this amount on the bill.
Refund due ₹...	Amber. The patient paid more than the bill now comes to, usually after a discount was raised. Hand the money back and record the refund (see *Change the discount on a finished bill*).
Refunded ₹...	Money already paid back on this bill.
Draft	A bill saved to finish later. It has no bill number yet and has not moved stock or taken payment. A grey note such as *PHI-2026-080 not final* may follow it.
Cancelled / Cancelled draft	The bill or draft was cancelled. Its amount is struck through and it is not counted in the total.
Revised	A discount on this bill was changed after it was finished.
Counter sale	A quick sale made in Inventory rather than on this bill screen. It opens in Inventory.

11.3 Search for a bill

WHO USES THIS Pharmacists, admins

Use search when a patient comes back with a question about a bill.

1. In **Search by**, choose **Bill No**, **Patient** or **Mobile**.
2. Type part of the bill number, the patient's name or the mobile number. The list narrows as you type.
3. Click **Clear filters** to go back to the full list.

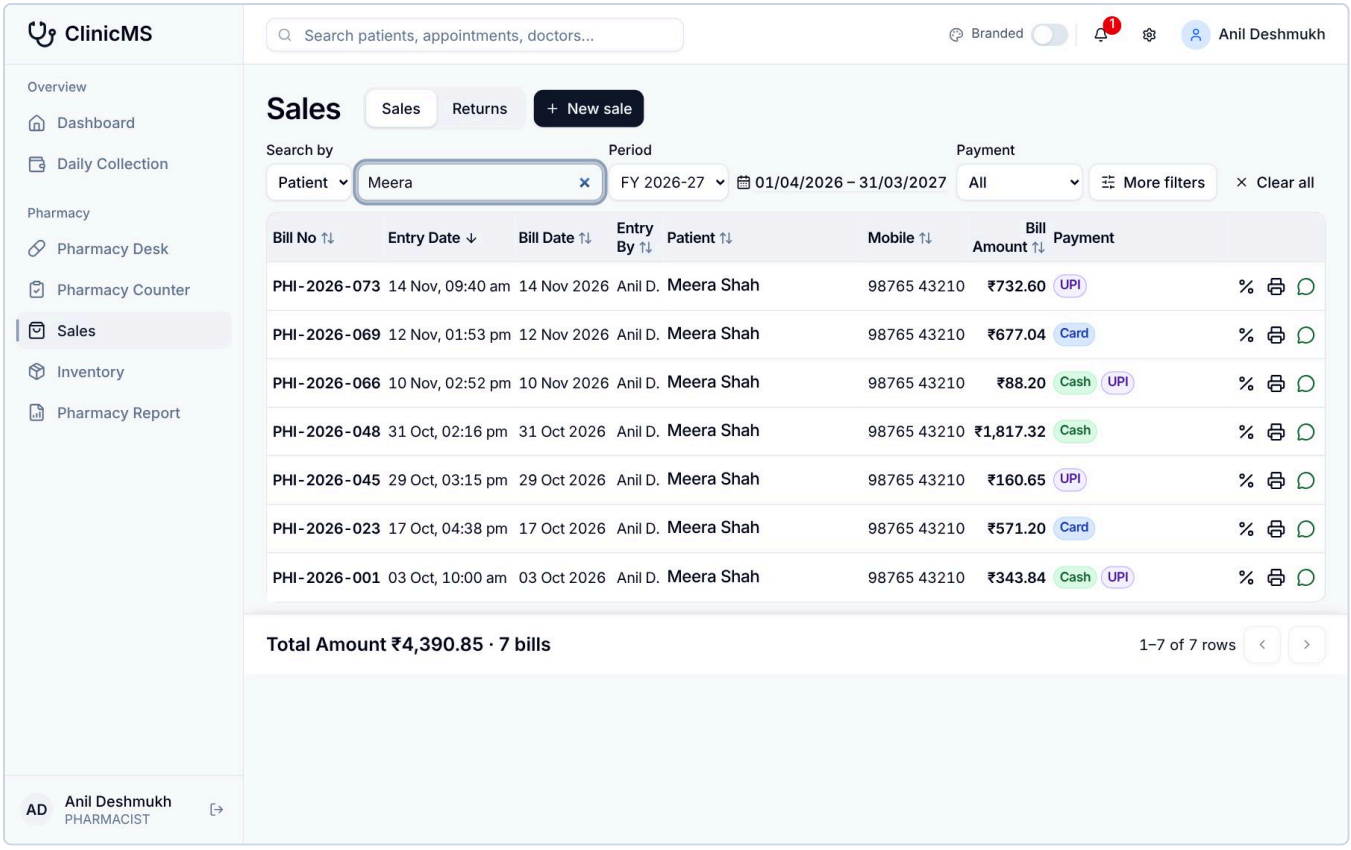

Figure 11.3. Searching by patient name.

11.4 Choose the period

WHO USES THIS Pharmacists, admins

The **Period** list picks the dates the Sales list covers. It starts on the current financial year (April to March). The dates chosen show on the button beside it. Click that button to type your own **from** and **to** dates; the period then shows **Custom**.

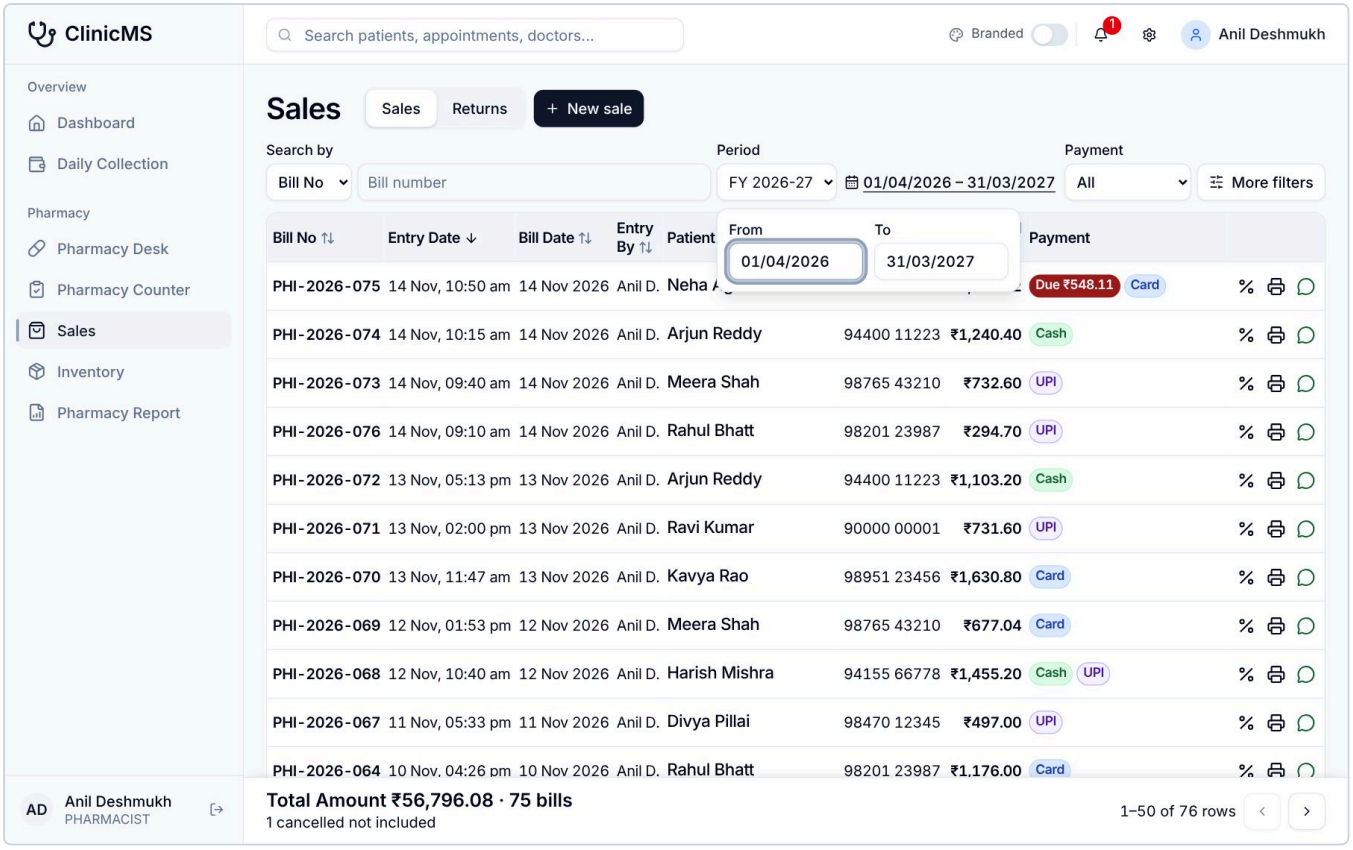

Figure 11.4. Click the dates beside Period to type your own date range.

PERIOD	DATES COVERED
Today	Today only.
Yesterday	Yesterday only.
Last 7 days	Today and the six days before it.
This month	The calendar month so far.
FY 2026-27	The current financial year, 1 April to 31 March.
FY 2025-26	The previous financial year.
Custom	The dates you type in the box that opens from the dates button.

11.5 Filter by payment and by state

WHO USES THIS Pharmacists, admins

Payment shows only bills paid by one mode: Cash, UPI, Card, Net banking, Wallet, Insurance or Other. Choose **Due (unpaid)** to list every bill with money still owed. With a payment filter on, the totals line shows how much was collected by that mode, or how much is still due.

More filters opens three more lists. **State** shows only Final, Draft or Cancelled bills. **Source** separates **Pharmacy bills** made on the bill screen from **Counter sales** made in Inventory. **Entry by** shows only the bills saved by one member of staff.

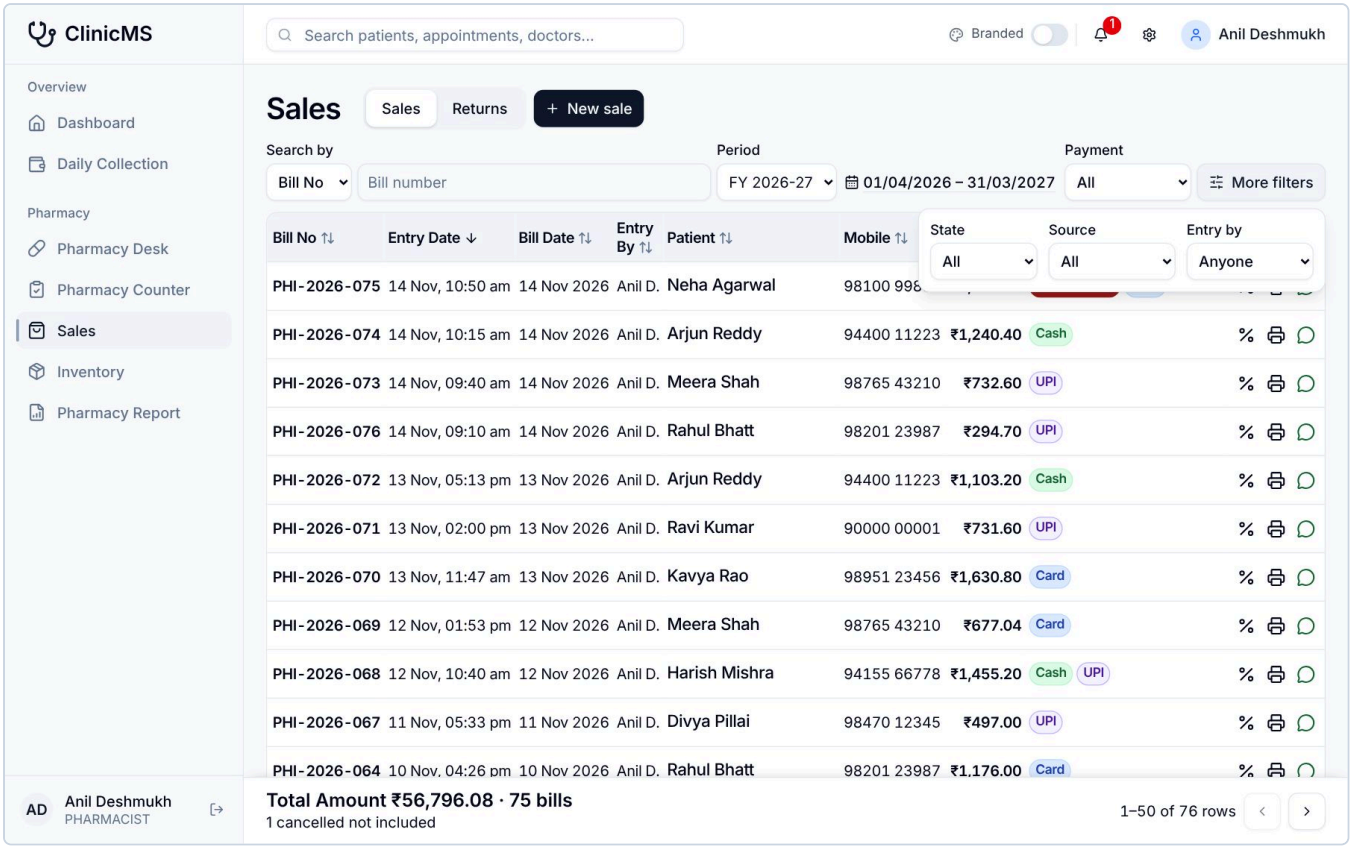

Figure 11.5. More filters: State, Source and Entry by.

11.6 Row actions: discount, print and WhatsApp

WHO USES THIS Pharmacists, admins

Three small buttons sit at the right end of each row. Point at one to see its name. A button that cannot be used on that row is greyed out, and pointing at it tells you why.

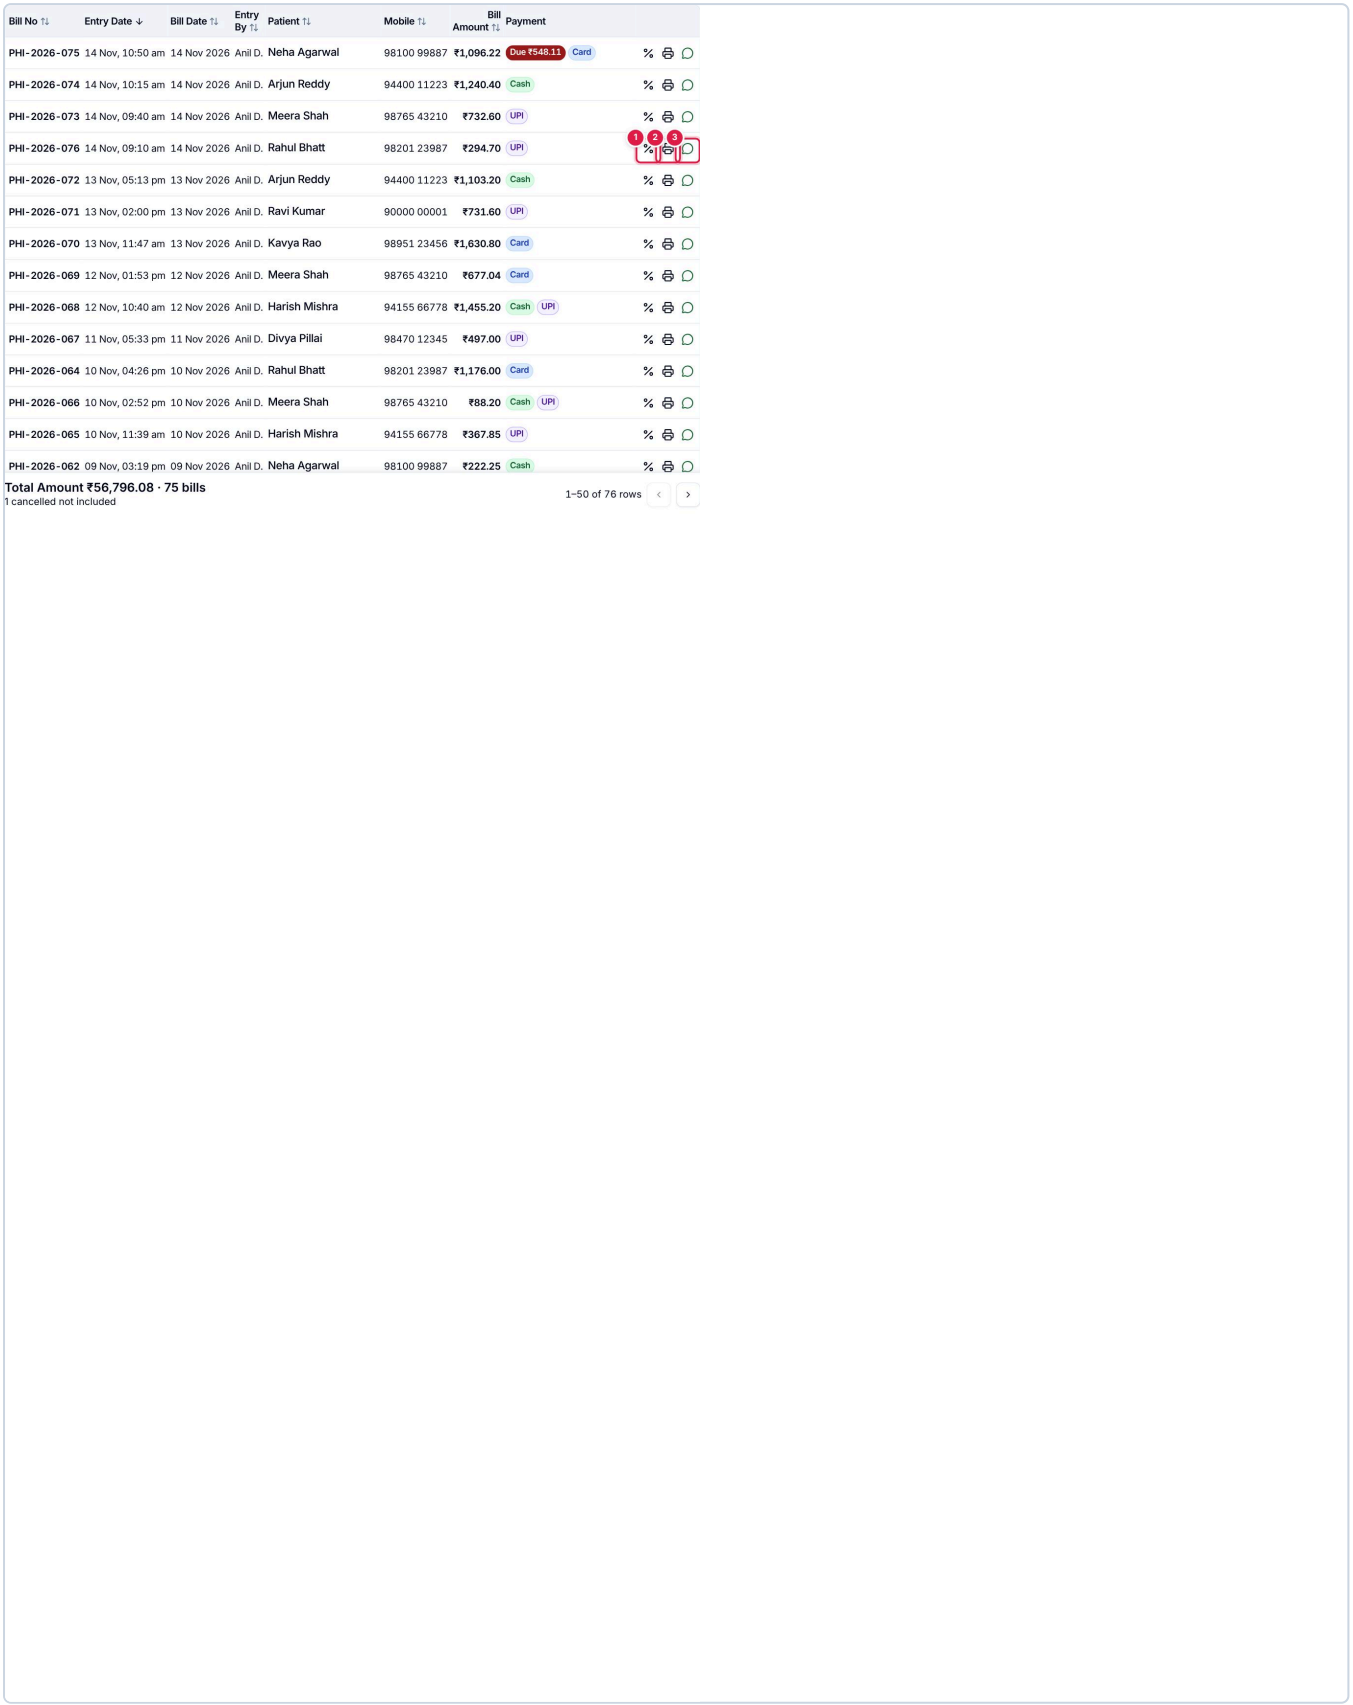

Figure 11.6. The row actions: 1 Edit discount, 2 Print, 3 Send on WhatsApp.

BUTTON	WHAT IT DOES
% Edit discount	Opens the finished bill with the discount window ready. Not available on drafts (open the draft instead), cancelled bills, counter sales or returns.
Printer: Print	Prints the bill, or the return receipt, without opening it. Drafts and cancelled bills cannot be printed.
Speech bubble: Send on WhatsApp	Opens WhatsApp with a ready message to the patient's mobile: the bill number, date, amount, payment modes and any balance due. For a return it states the refund. It needs a valid 10-digit mobile number and a finished bill.

11.7 Bill medicines to a patient (New sale)

WHO USES THIS Pharmacists

Use New sale for a walk-in customer or any sale that does not start from a prescription. The bill screen has the patient and medicines on the left and the money on the right.

1. On the Sales page, click **New sale**.
2. In **Patient**, type part of the patient's name or phone number and click the patient in the list. Billing Name and Phone fill in by themselves.
3. In **Doctor**, choose the prescribing doctor if there is one.
4. In **Search Drugs**, type part of a medicine name, maker or ingredient. The closest result is marked **Best Match**, the next ones **High Match**. Each result shows the maker, pack size and price.
5. Click **Add** beside the medicine. It appears under **Invoice Items**.
6. Repeat for each medicine.

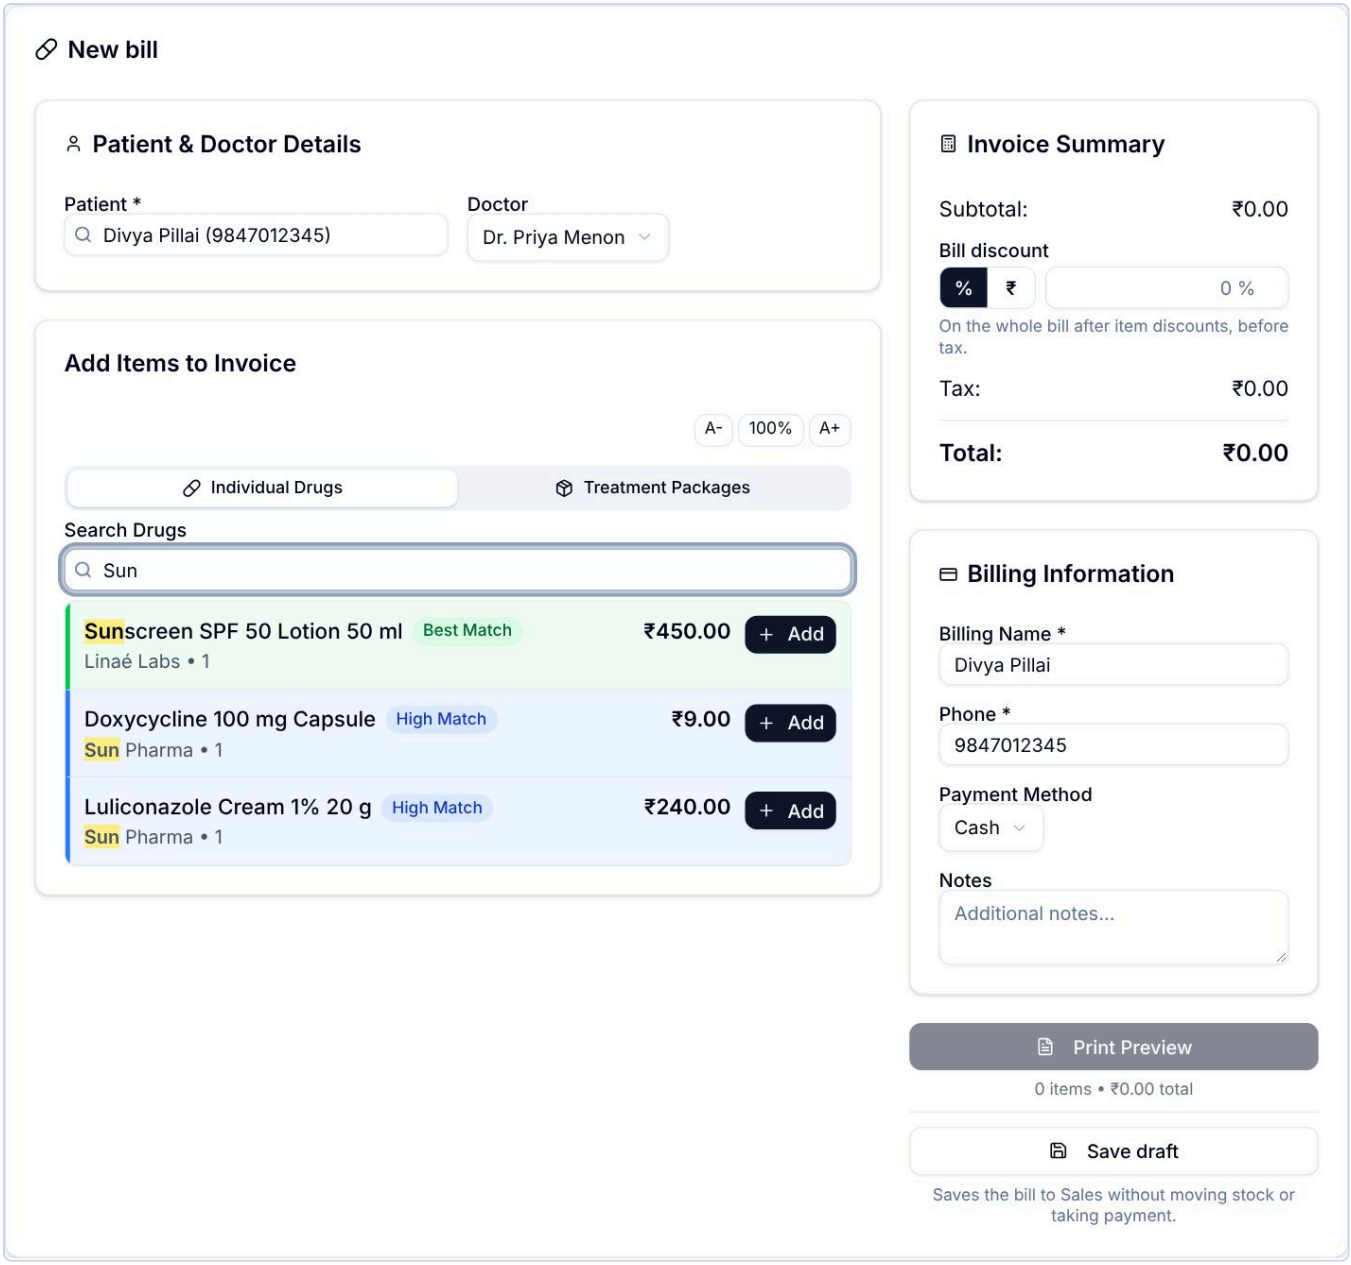

Figure 11.7. Patient and doctor chosen, and medicines found by typing "Sun".

> **TIP**
> The **A-**, **100%** and **A+** buttons make the text of this part of the screen smaller or larger. Click **100%** to reset it.
>
> The **Treatment Packages** tab adds a ready-made package instead of single medicines. See *Treatment Packages* in the Pharmacy Desk chapter.

11.8 Set quantity, discount and GST on each medicine

WHO USES THIS Pharmacists

Each medicine on the bill has its own row of boxes. The GST rate comes from the medicine's stock record. The total of the row updates as you type.

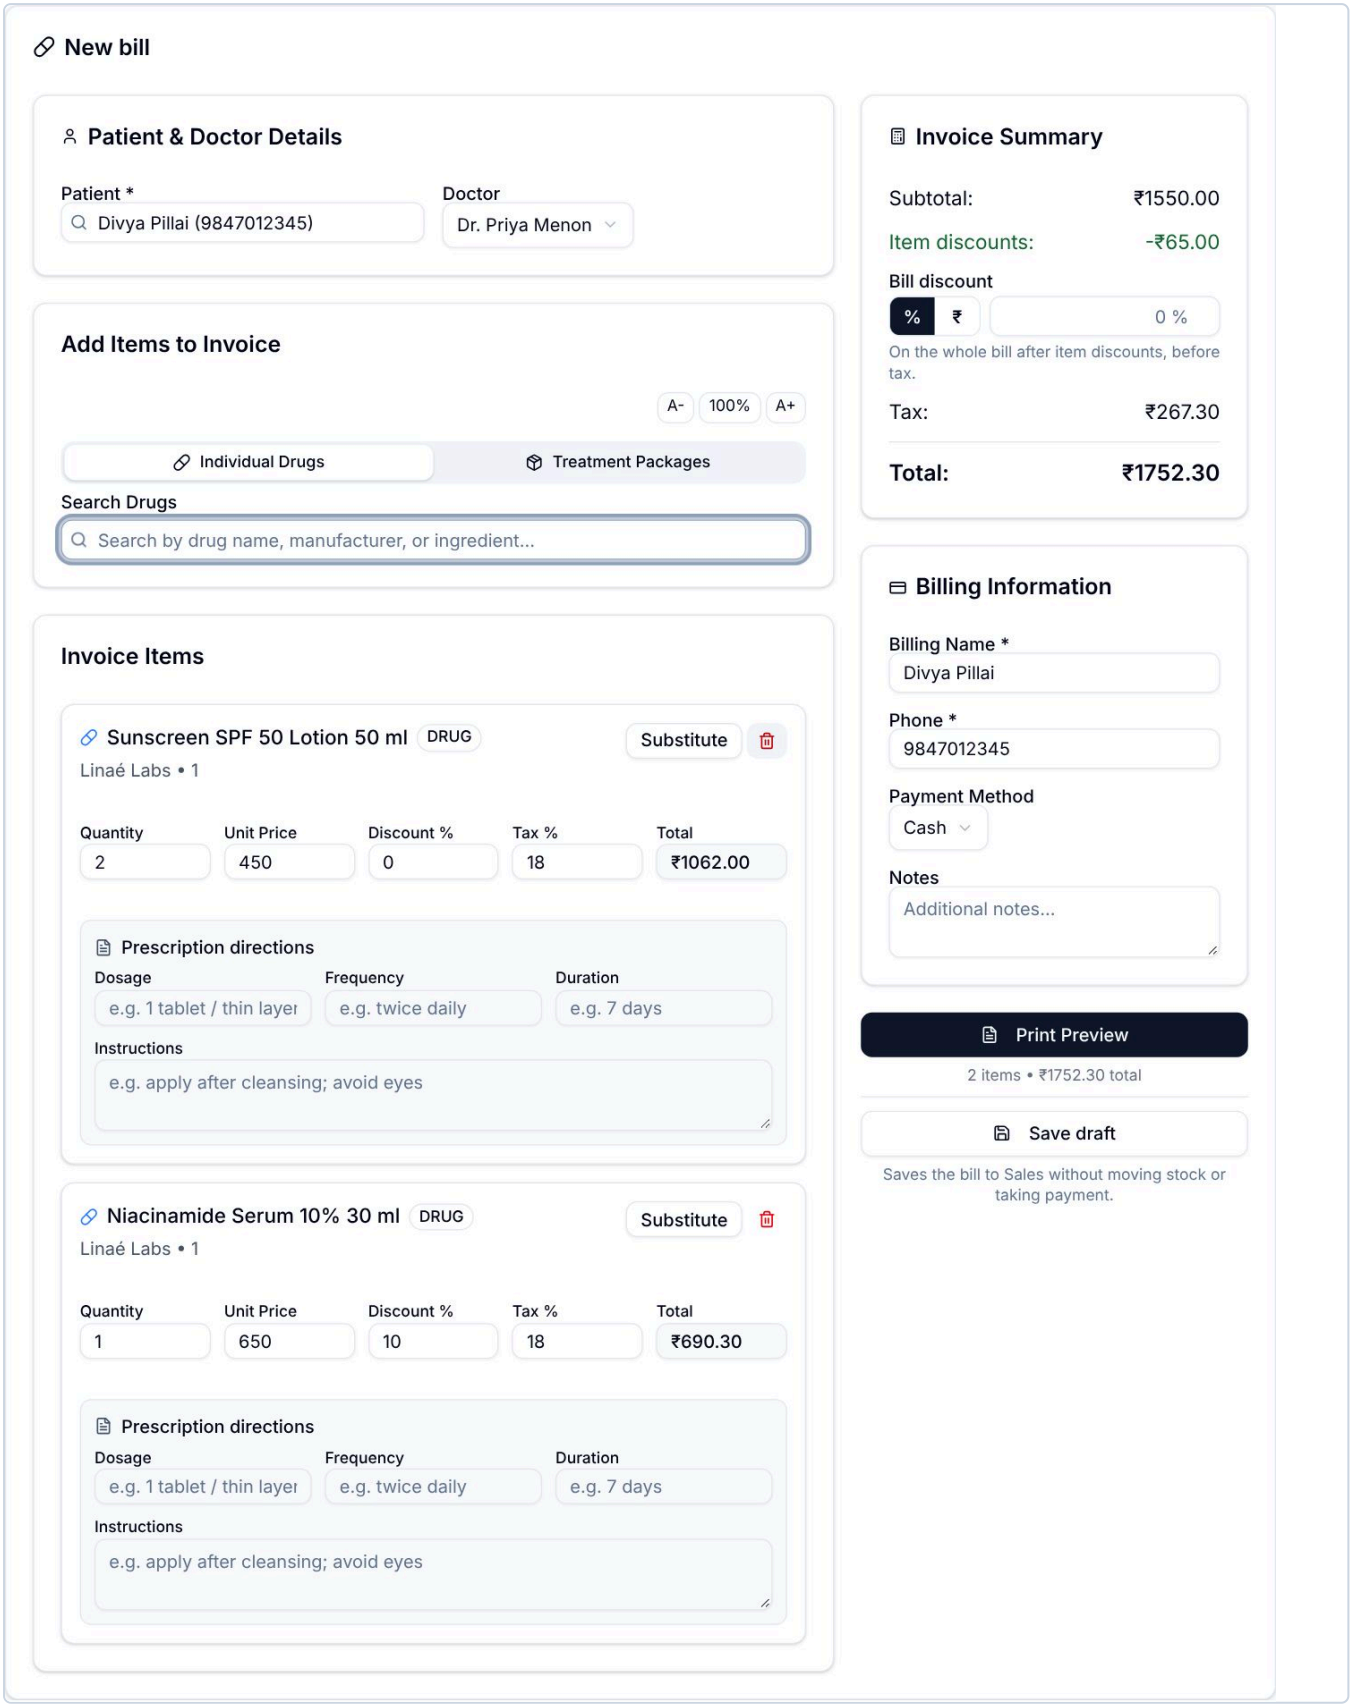

Figure 11.8. Two medicines on the bill: two sunscreens, and a serum with a 10% item discount.

ON THE SCREEN	WHAT IT MEANS
Quantity	How many units to sell. If the quantity is more than the stock, a red **Insufficient stock: N available** badge appears. A grey **Low stock: N available** badge warns that the shelf is nearly empty.
Unit Price	The selling price of one unit, taken from stock.
Discount %	An item discount on this medicine only.
Tax %	The GST rate. If it is empty, the box is marked and the bill shows **GST pending**; type the rate before you finish.
Total	Quantity times price, less the item discount, plus GST.
Prescription directions	Optional dosage, frequency, duration and instructions that print on the bill for the patient.
Substitute	Replaces the medicine with another product while keeping the quantity. Search for the replacement, or click **Cancel substitution**.
Bin	Removes the medicine from the bill.

11.9 Give a discount on the whole bill

WHO USES THIS Pharmacists

A bill discount comes off the whole bill after the item discounts and before GST. Choose whether you are giving a percentage or a rupee amount.

1. Under **Bill discount** in the Invoice Summary, click **%** for a percentage or **₹** for an amount in rupees.
2. Type the discount. The summary shows it as a separate green line.

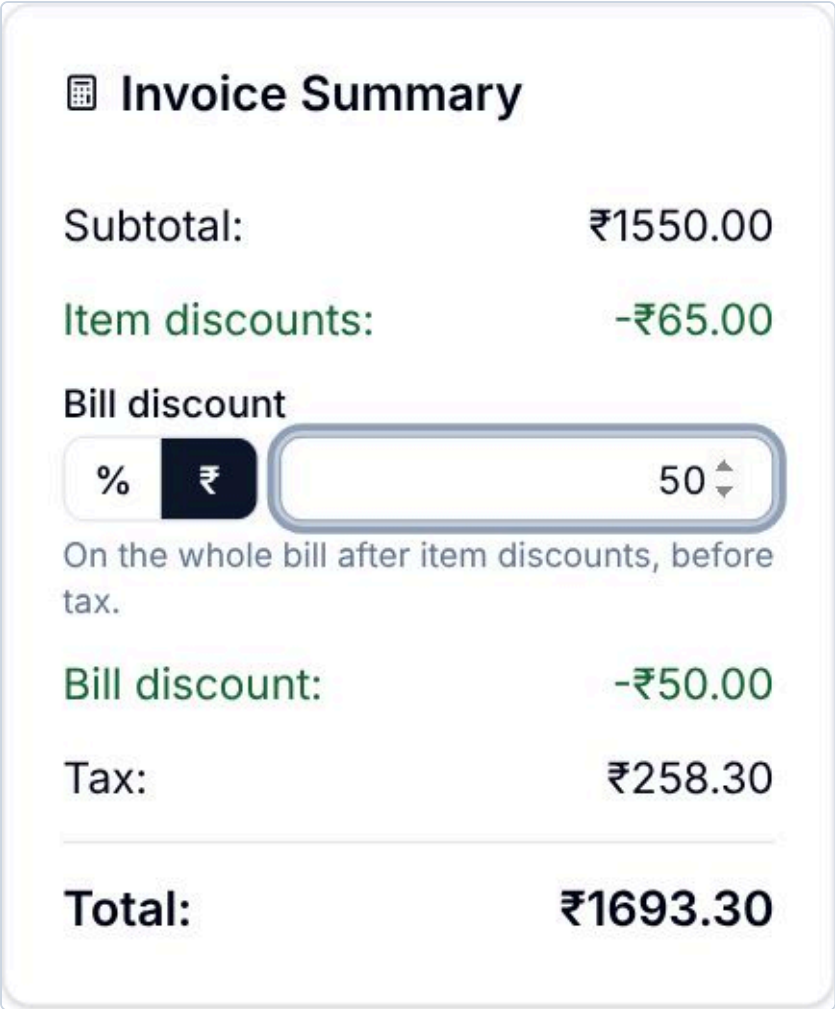

Figure 11.9. The Invoice Summary with a ₹50 bill discount.

ON THE SCREEN	WHAT IT MEANS
Subtotal	Quantity times price for all medicines, before any discount.
Item discounts	The total of the discounts given on single medicines.
Bill discount	The discount on the whole bill.
Tax	GST on what is left after the discounts.
Total	What the patient pays.

11.10 Take payment and finish the sale

WHO USES THIS Pharmacists

Finishing a bill gives it its bill number, takes the medicines out of stock and records the payment for the full total in the mode you chose. Until then nothing is saved.

1. Under **Billing Information**, check the **Billing Name** and **Phone**. Change them if the bill should be in another name.

2. In **Payment Method**, choose **Cash**, **Card**, **UPI** or **Net Banking**.
3. Type any **Notes** that should print on the bill.
4. Click **Print Preview**. The bill opens full screen as it will print. It says *Given when the bill is printed* where the bill number will go.
5. Check the bill, then click **Confirm Invoice**. The button changes to **Invoice Confirmed** and the bill number appears.
6. Click **Print** to print it, or **Download PDF** to save it. Click **Close** when done.

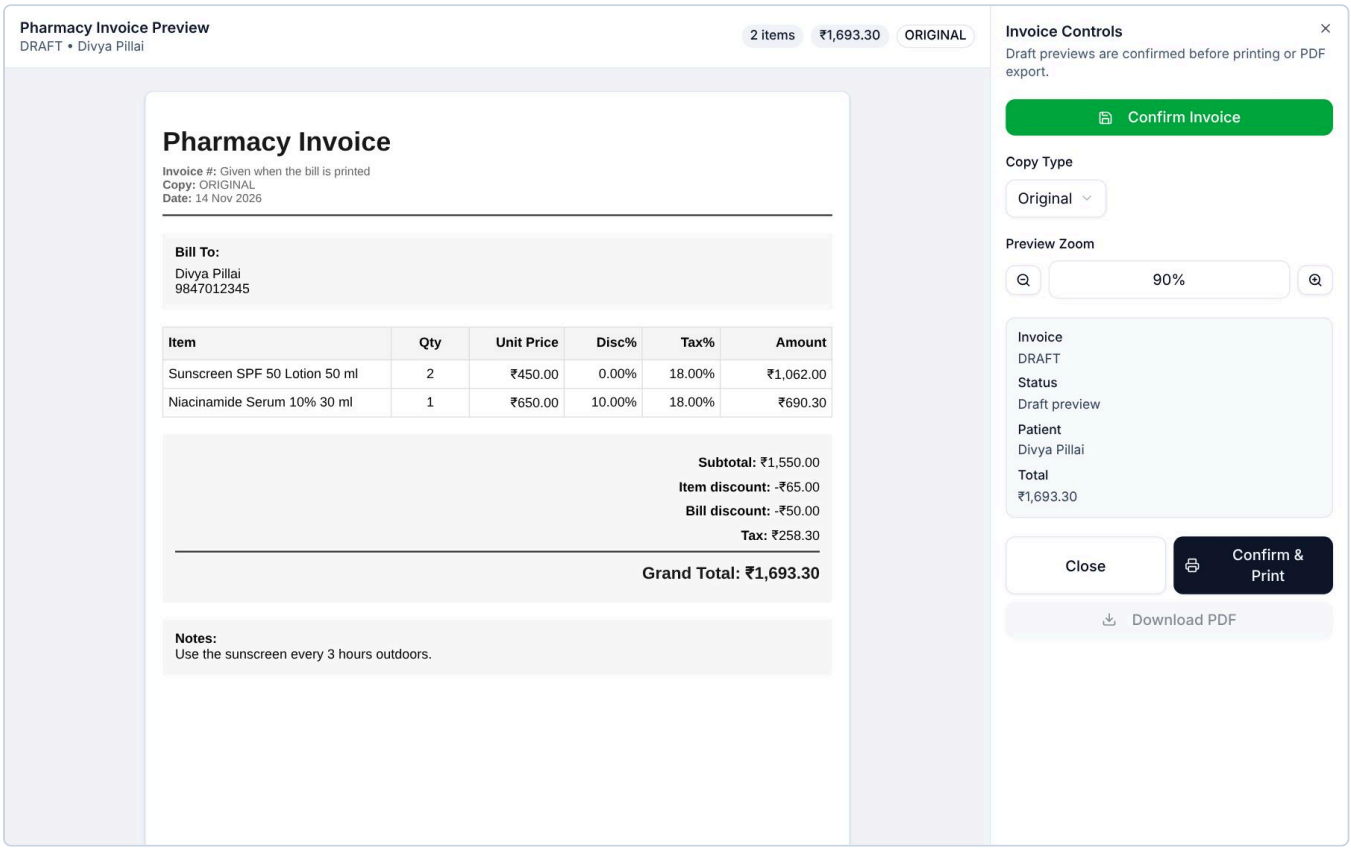

Figure 11.10. Print Preview before confirming: the bill has no number yet.

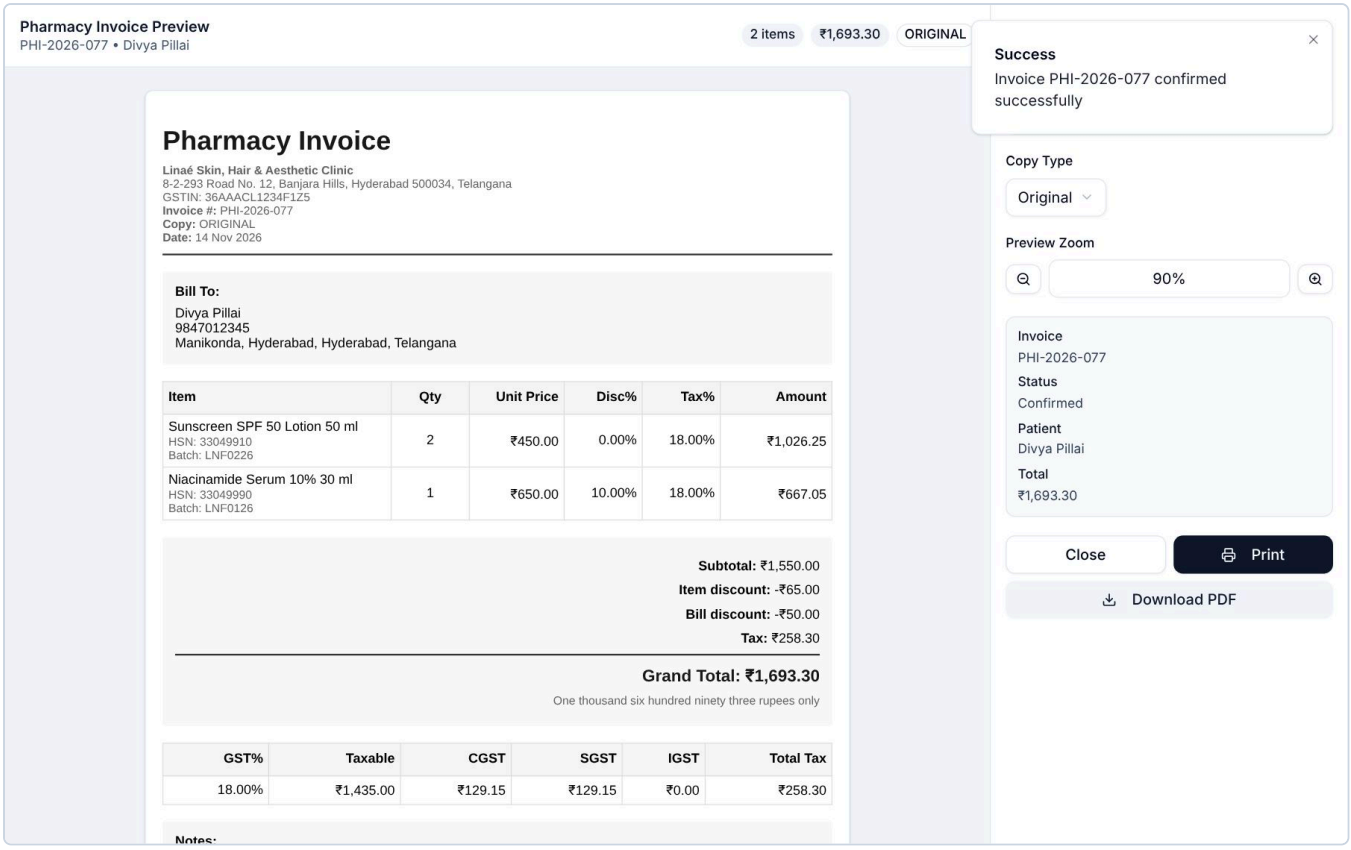

Figure 11.11. After Confirm Invoice: the bill has its number and can be printed.

ON THE SCREEN	WHAT IT MEANS
Confirm Invoice	Finishes the bill: gives the number, moves stock and records the payment.
Confirm & Print	Does the same and opens the print window in one step. After confirming it reads **Print**.
Copy Type	**Original** for the patient, **Duplicate** for a second copy. The word prints on the bill.
Preview Zoom	Makes the preview larger or smaller on screen. It does not change the print.
Download PDF	Saves the confirmed bill as a PDF file.

The printed bill shows the clinic's name and details, the bill number, copy type and date, the patient's name and phone (**Bill To**), each medicine with quantity, unit price, discount %, tax % and amount, then the subtotal, item discount, bill discount, tax and **Grand Total**, a GST table that splits the tax into CGST, SGST and IGST for each rate, and your notes.

> **TAKE CARE**
> Confirm Invoice takes the medicines out of stock and records the payment. Check the bill before you confirm. Only the discount can be changed afterwards.
>
> Every bill is recorded as paid in full at the counter. If the patient pays only part now, see *A bill with money still due*.

11.11 Open a finished bill

WHO USES THIS Pharmacists, admins

Click a bill in the Sales list to open it. The bill shows its number, a badge for its state (**Paid**, **Due**, **Refund due** or **Cancelled**), the date, patient, phone and doctor, every medicine, the totals, and what has been paid. Under it, **Payments** lists each payment and refund, and **Discount changes** lists every change to the discount with who made it, when, why, and the old and new totals.

Use **Print** to print it again, **Edit discount** to change its discount, and **Back to Sales** to return to the list. Items, quantities and prices cannot be changed on a finished bill.

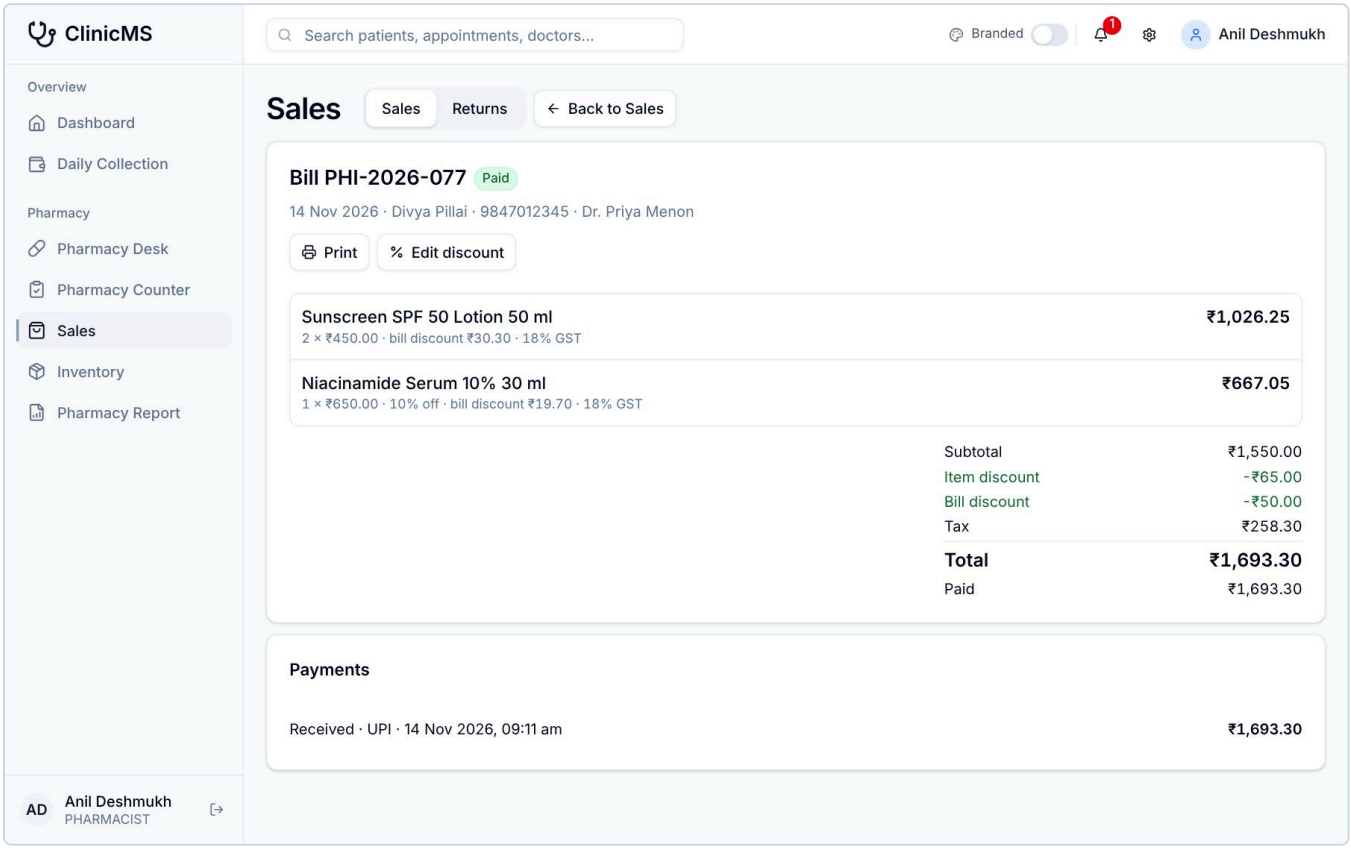

Figure 11.12. A finished bill, paid by UPI.

11.12 Change the discount on a finished bill

WHO USES THIS Pharmacists, admins

Sometimes the doctor agrees a discount after the bill was paid. You can change the item discounts and the bill discount on a finished bill. The bill keeps its number, and the medicines and stock stay as they were.

If the new total is lower than what the patient paid, the bill shows **Refund due** until you record the money you hand back.

1. Open the bill and click **Edit discount**, or click the **%** button on its row in the Sales list.
2. Change the **Item discount %** of any medicine, or the **Bill discount**.

3. Check **Total after change**. **Refund due after saving** shows how much to give back.
4. Type a **Reason**. It is required.
5. Click **Save discount**.
6. Click **Record refund ₹...**, choose how you paid it back (**Paid back by**), add a UPI or card reference if any, and click **Record refund**.

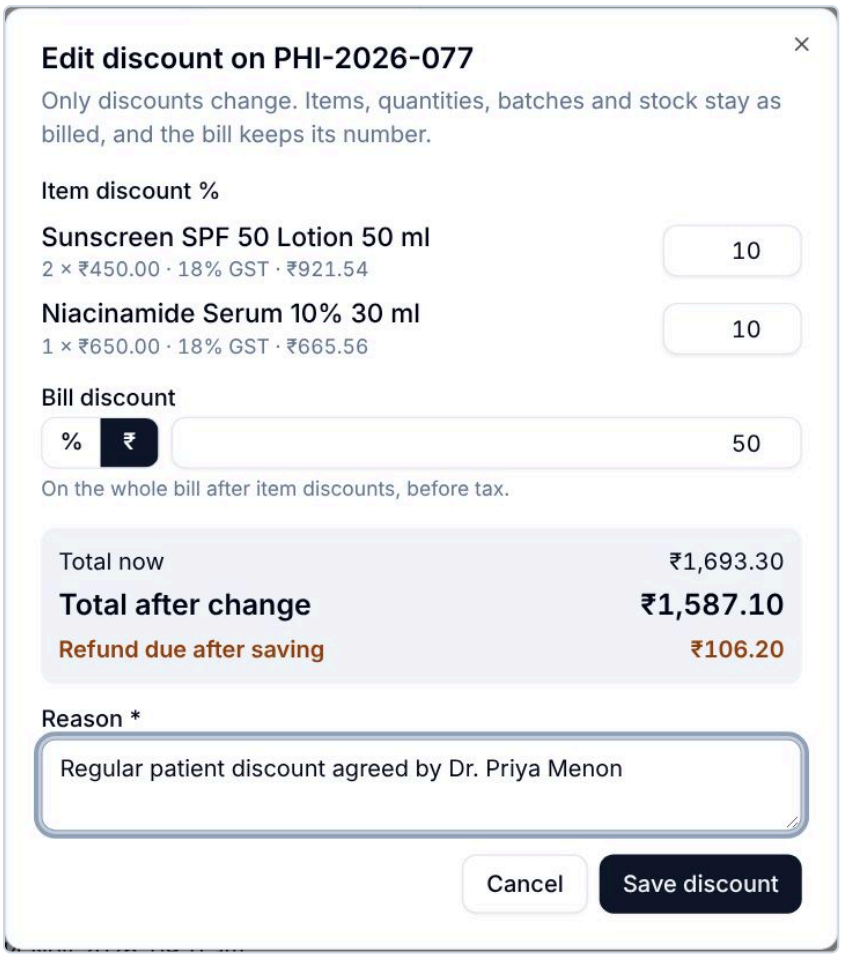

Figure 11.13. Edit discount: a 10% discount on the sunscreen leaves a refund due.

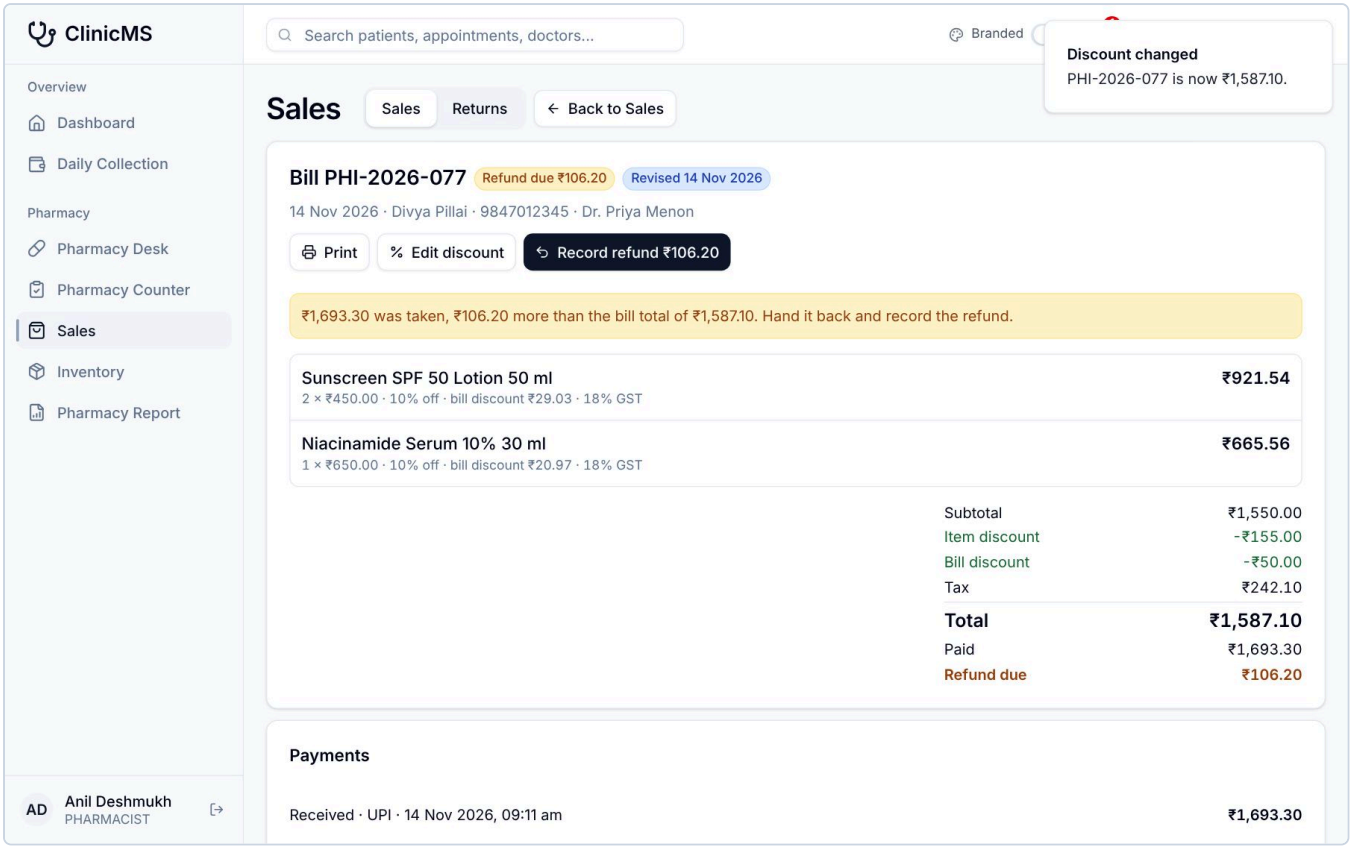

Figure 11.14. After saving: the bill is Revised and shows the refund due.

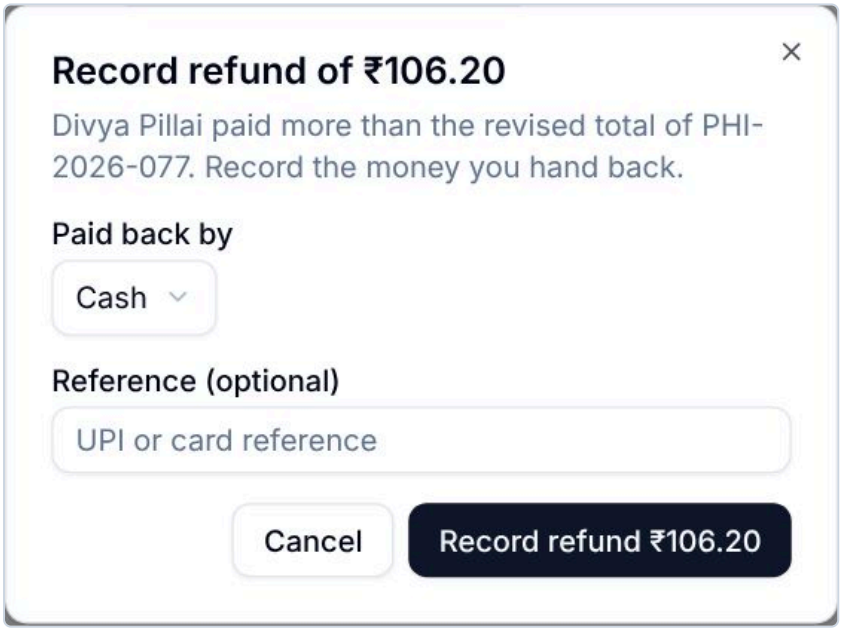

Figure 11.15. Recording the refund handed back in cash.

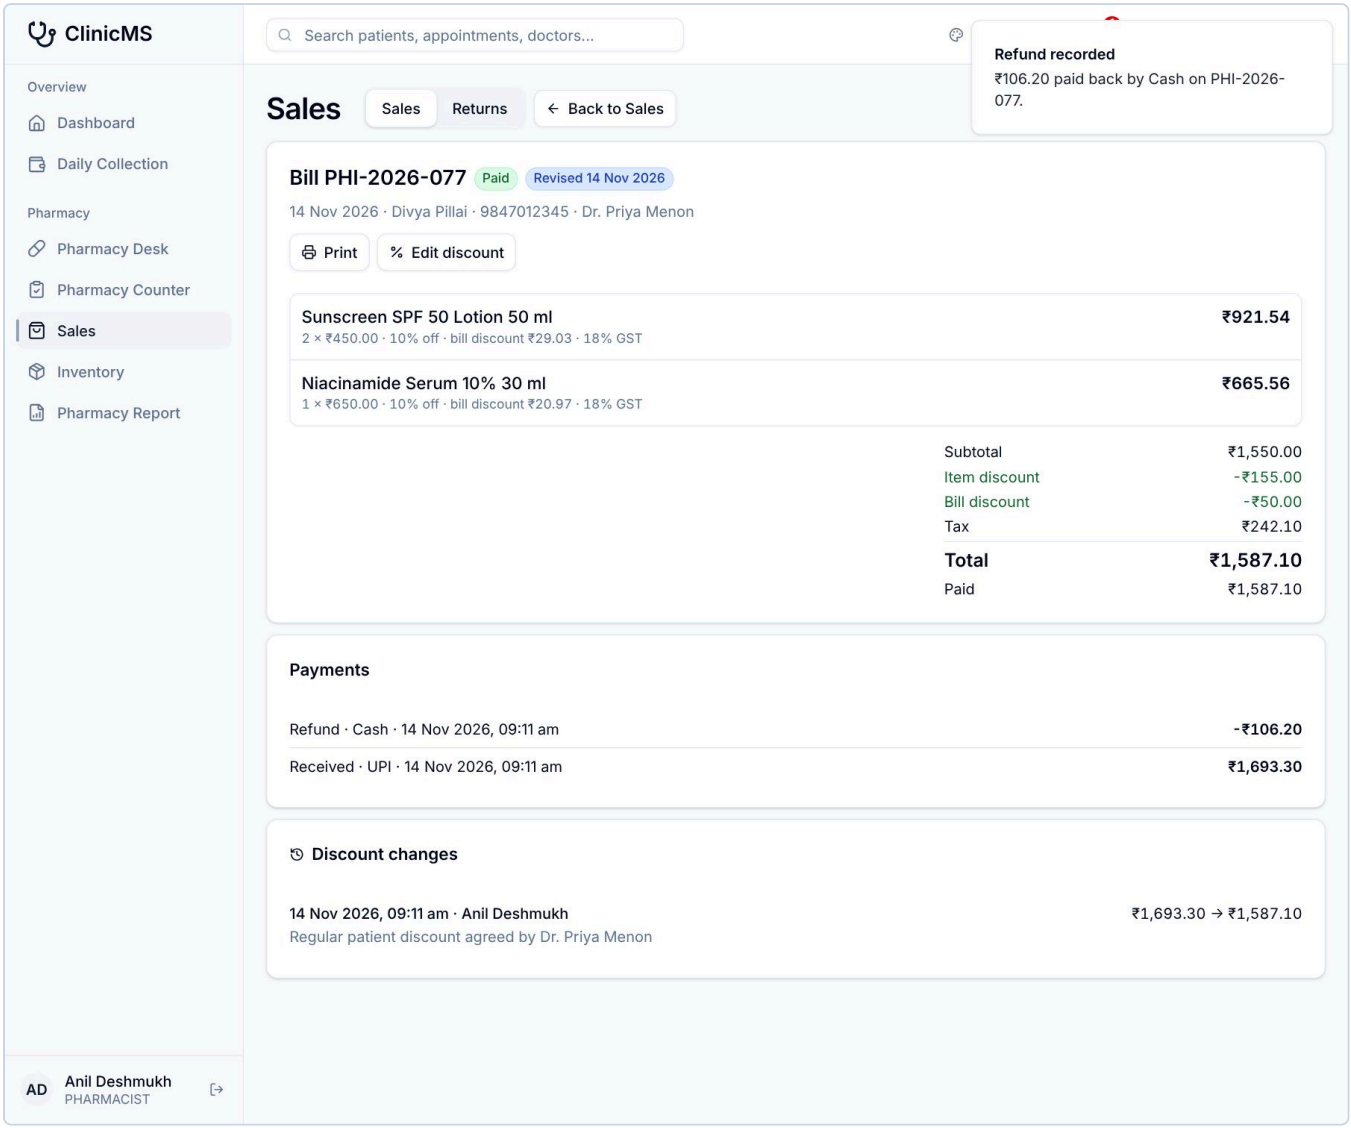

Figure 11.16. The bill after the refund: Payments shows the refund, and Discount changes shows who changed the discount and why.

> **TAKE CARE**
> A discount change and a refund cannot be undone. Each one is kept in the bill's history.

11.13 A bill with money still due

WHO USES THIS Pharmacists, admins

A bill owes money when the amount paid is less than its total. This happens when a discount is lowered after the bill was paid, or when the bill is to be paid by insurance. The Sales list shows a red **Due ₹...** badge on the row and the bill shows **Due**.

In the example below, a 20% discount was given at the counter, and the owner later decided it should not apply. Lowering the discount to 0 raised the total, so **Still to collect** shows the difference.

To collect the balance, open **Pharmacy Desk**, click **Invoices**, find the bill and click the green **Mark as Paid** tick (see the Pharmacy Desk chapter). It records the remaining amount in the bill's payment mode.

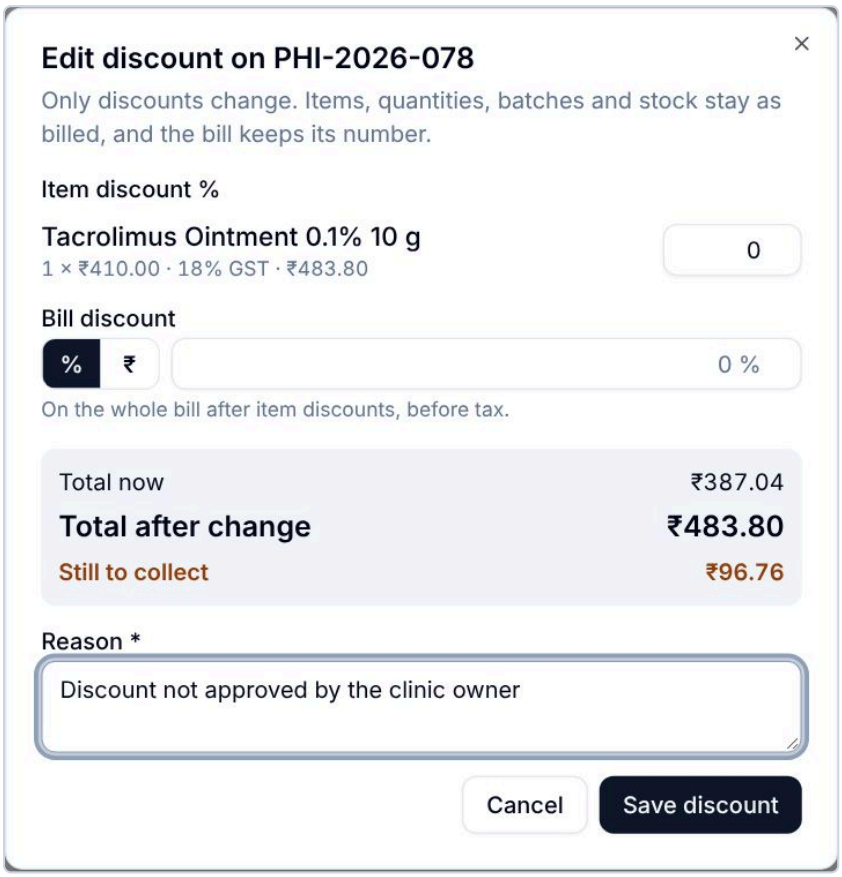

Figure 11.17. Removing a discount after payment leaves an amount still to collect.

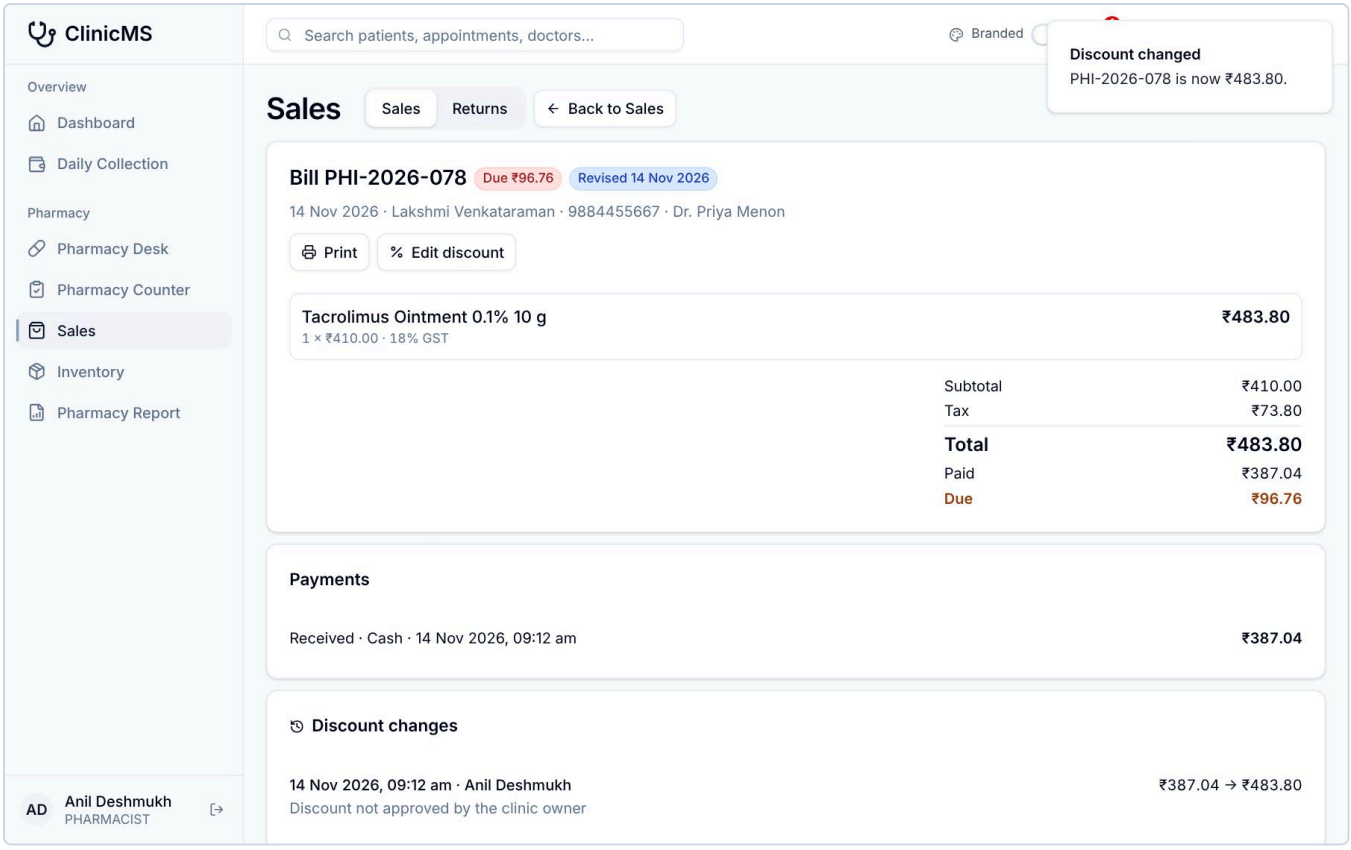

Figure 11.18. The bill now shows Due and the amount still owed.

11.14 Save a bill as a draft and finish it later

WHO USES THIS Pharmacists

Save a draft when the patient will collect later, or you are waiting for the doctor. A draft is listed in Sales with a **Draft** badge. It has no bill number, does not move stock and does not take payment. The bill number is given when you finish it.

1. Fill in the bill as for a new sale.
2. Click **Save draft** under Print Preview. The heading changes to **Draft** with *Gets its bill number when finished*.
3. Later, open the Sales list and click the **Draft** row (search by patient name to find it quickly).
4. Change anything you need. The note under Save draft shows **Unsaved changes** until you save again, then **All changes saved to the draft**.
5. Click **Print Preview** and **Confirm Invoice** to finish it. It now gets its bill number.

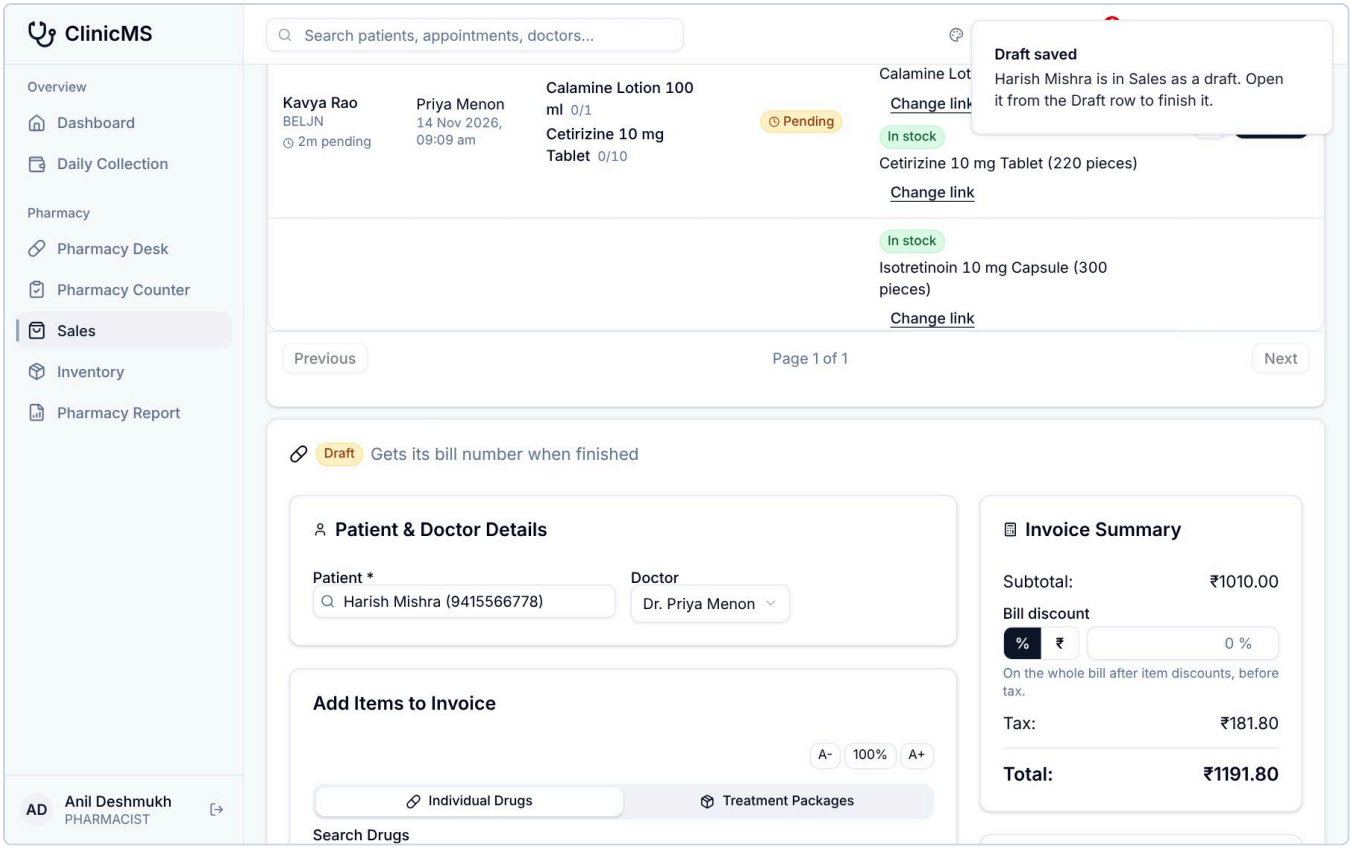

Figure 11.19. A saved draft.

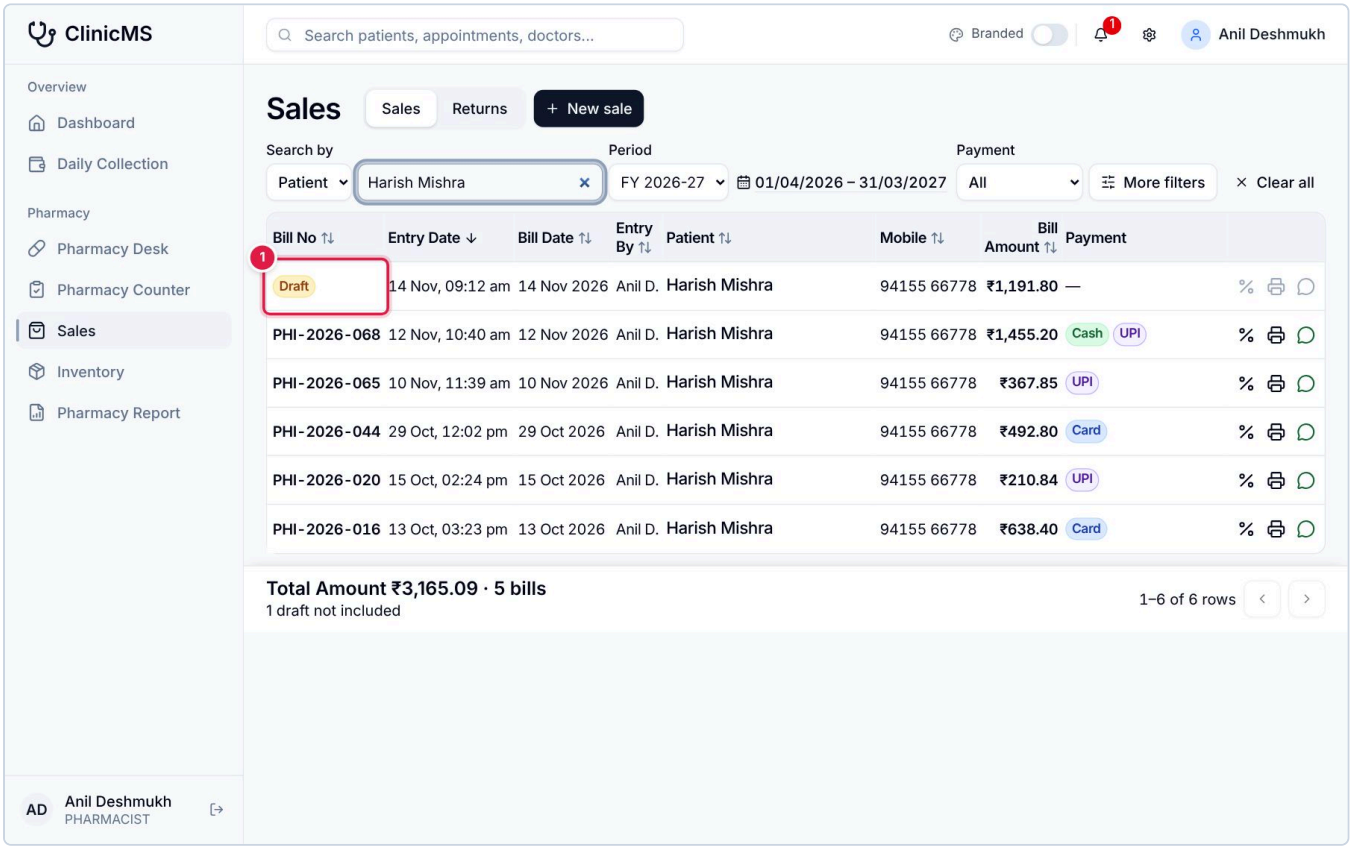

Figure 11.20. The draft in the Sales list.

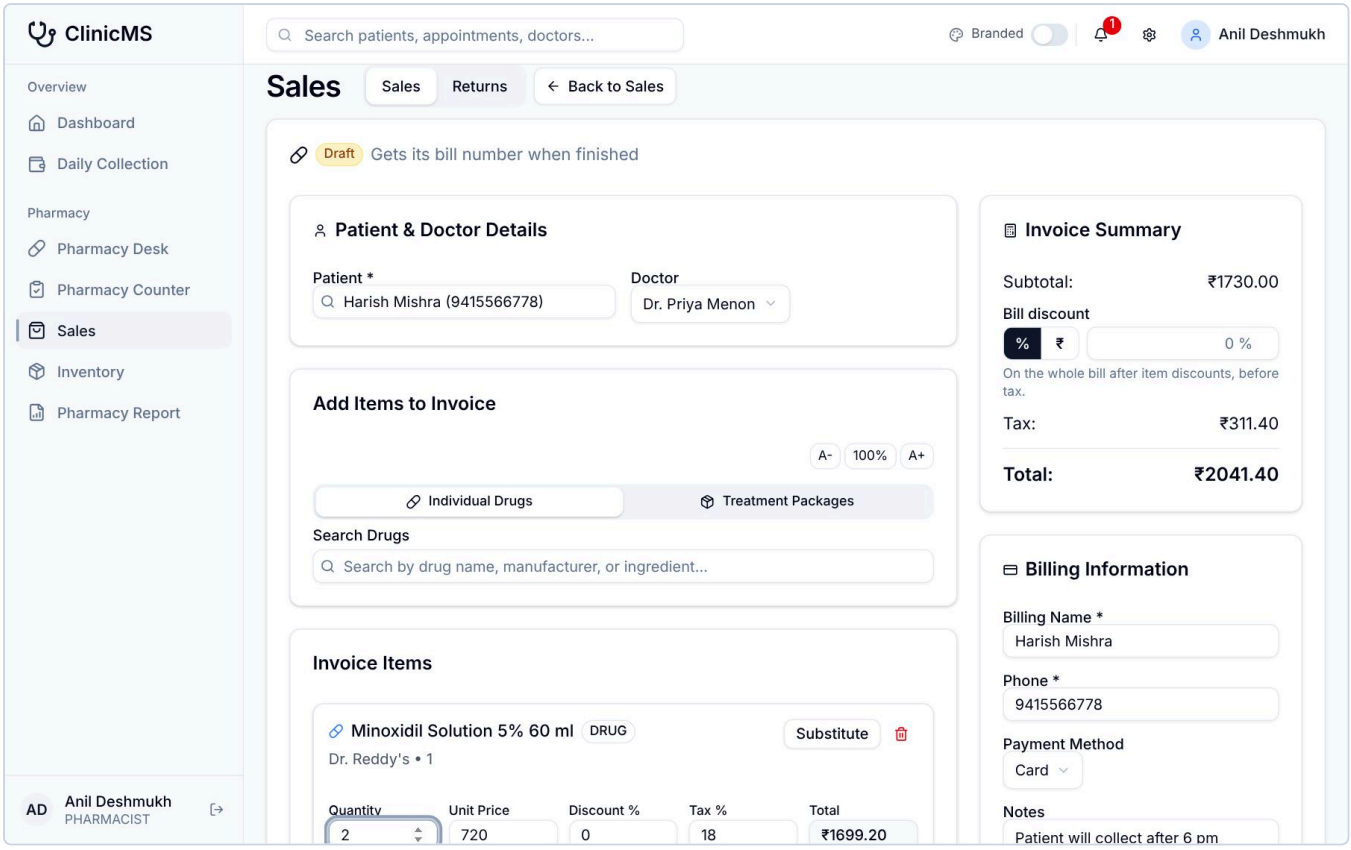

Figure 11.21. The draft reopened: the patient, medicines and notes are all kept.

11.15 Discard a draft

WHO USES THIS Pharmacists

If the patient does not come back for a draft, discard it so it does not clutter the list. Nothing was sold, so stock and payments do not change. The draft stays in the Sales list as a **Cancelled draft** so you can see it existed.

A finished bill cannot be cancelled or deleted from the bill screen. If a patient returns medicines, make a return (below). If the price was wrong, change the discount.

1. Open the draft.
2. Click **Discard draft** under Save draft.
3. Click **Discard draft** in the window to confirm, or **Keep draft** to go back.

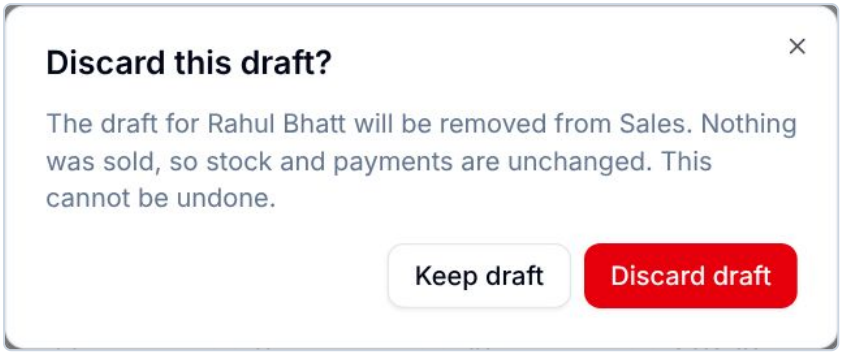

Figure 11.22. Discarding a draft asks you to confirm.

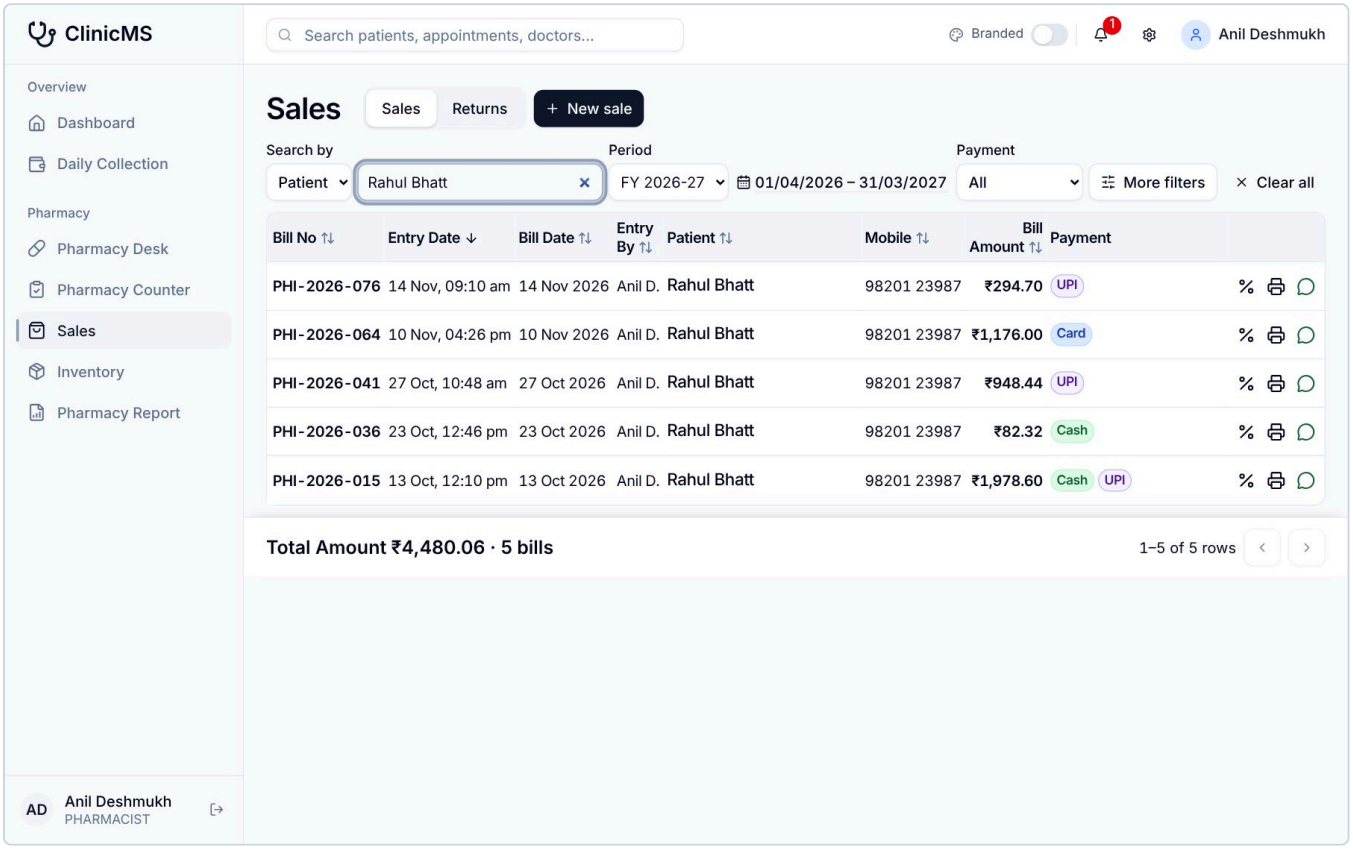

Figure 11.23. The discarded draft shows as a Cancelled draft, with its amount struck through.

> **TAKE CARE**
> Discarding a draft cannot be undone.

11.16 Bill a prescription from the queue

WHO USES THIS Pharmacists

The top of the New sale screen shows the **Prescription dispensing queue**: prescriptions written by the doctors that have not been fully billed. Use it to bill a prescription without typing each medicine.

1. Click **Load** on the prescription's row.
2. The bill fills in. Check each medicine: substitute, change the quantity or remove items as needed. Changes here do not alter the doctor's prescription.

3 Take payment and finish the bill as usual. The prescription leaves the Pending list once all of it is billed.

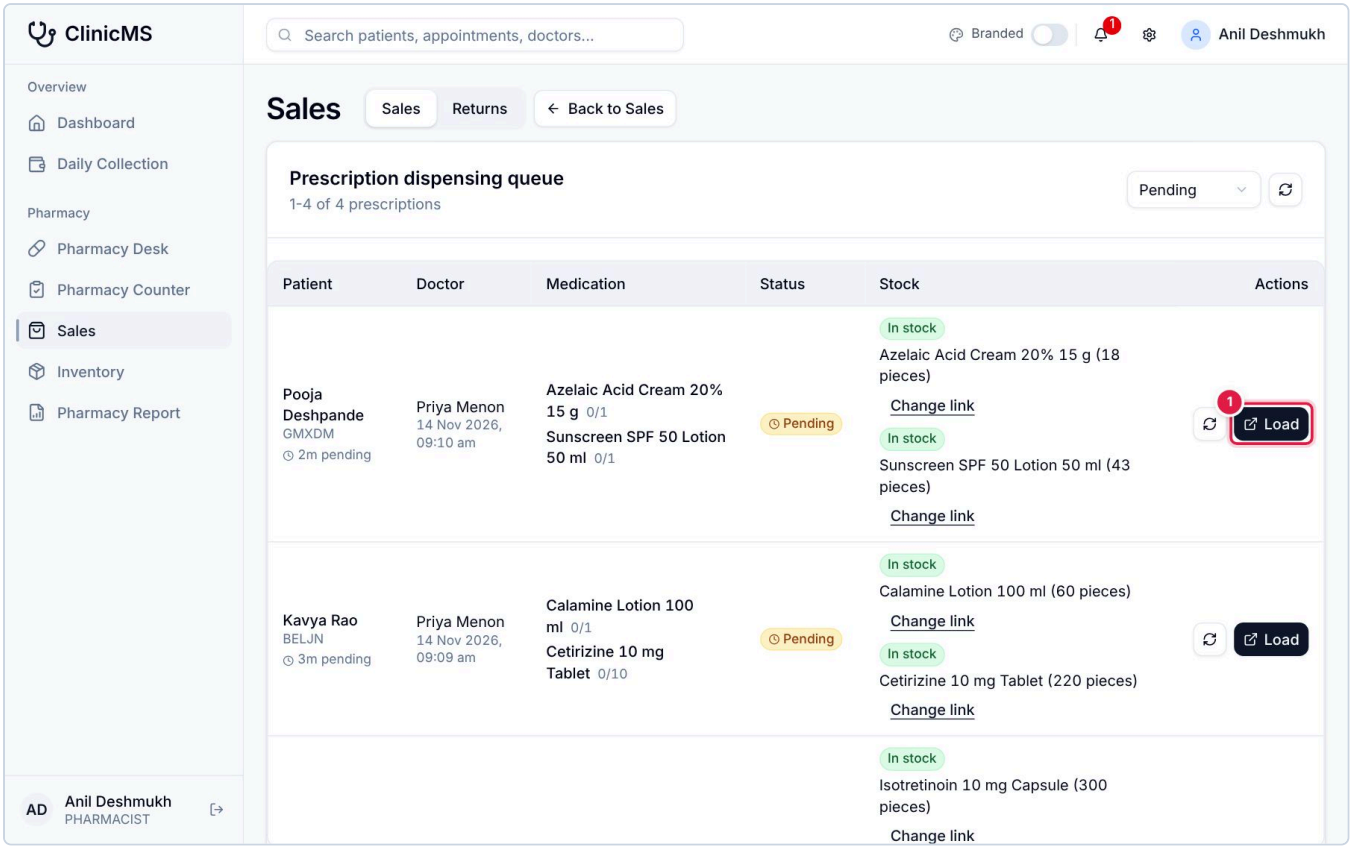

Figure 11.24. The prescription queue at the top of the New sale screen.

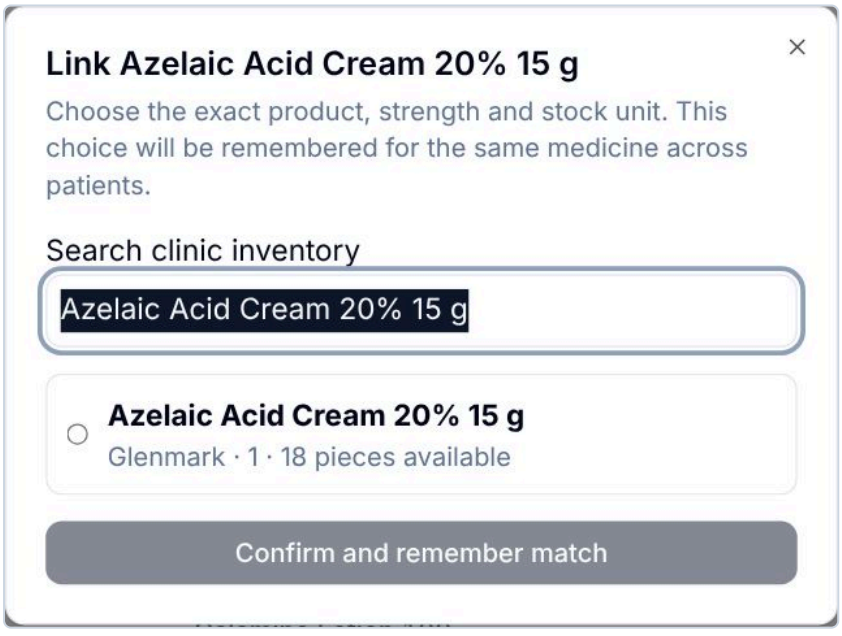

Figure 11.25. Change link: choose the exact stock product for a prescribed medicine.

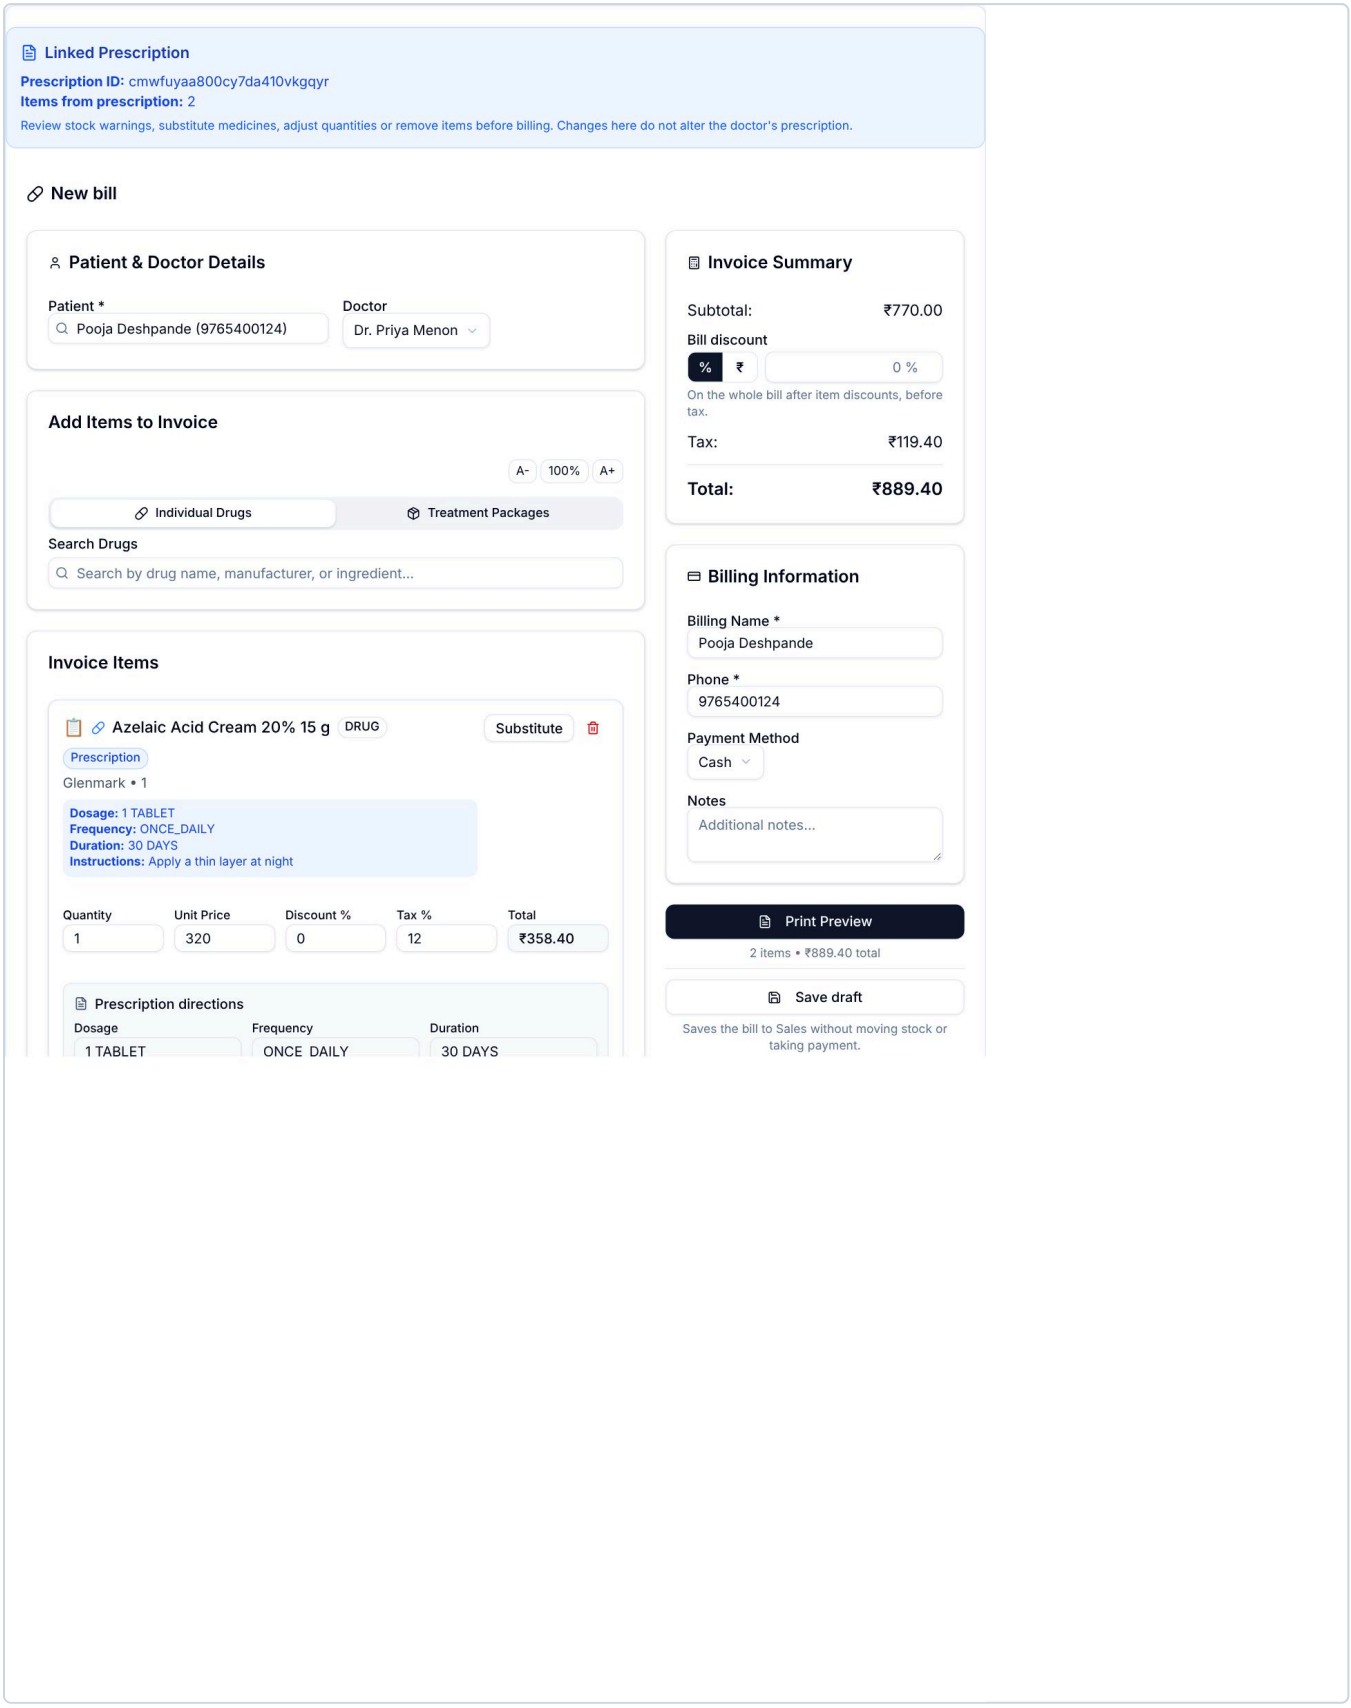

Figure 11.26. The prescription loaded into the bill. The blue box shows the linked prescription.

ON THE SCREEN	WHAT IT MEANS
Status list	**Pending** (not billed yet, the default), **Partial** (some medicines billed), **Dispensed**, **Expired** (older than its validity, or more than 24 hours old with nothing billed) or **All**.
Patient	Name, patient code and how long the prescription has been waiting.
Medication	Each medicine with the quantity billed so far out of the quantity prescribed, for example 0/1.
Status	Pending, Partial, Dispensed or Expired. **Over 2h** means the patient has waited more than two hours.
Stock	For each medicine: **In stock**, **Low**, **Out** or **Not linked**, with the quantity on the shelf. **Near expiry** warns that the batch expires soon.
Link item / Change link	Tells the app which stock product a prescribed medicine is. See below.
Refresh (round arrow)	Checks the stock again for that row. The arrow at the top reloads the whole queue.
Load	Fills the bill below with this prescription's patient, doctor and medicines.

When the queue shows **Not linked** for a medicine, the app could not find which product in stock the doctor meant. Click **Link item** (or **Change link** to correct an existing match), search the clinic's stock, choose the right product, strength and unit, and click **Confirm and remember match**. The app remembers the match for the same medicine on later prescriptions.

11.17 Take back medicines (New return)

WHO USES THIS Pharmacists

Make a return when a patient brings back unused medicines. The return opens in the Inventory screen, under **Sales**, **Customer returns**. You pick the medicines from the original sale, so the refund uses the price, discount and GST the patient actually paid.

1. On the Returns tab, click **New return**.
2. In **Search original sale**, type the bill number or medicine name.
3. In **Add from original sale**, choose the sold batch. The list shows how many units can still be returned. The medicine is added to the table.
4. Set the **Quantity** being returned.
5. In **Disposition**, choose **Restock** to put it back on the shelf, or **Quarantine** to keep it aside (for example an opened tube).
6. In **Refund method**, choose **CASH**, **UPI**, **CARD** or **CREDIT** (store credit).
7. Type the reason in **Reason / notes**. It is required.
8. Click **Post return**. **Save draft** keeps it to finish later.

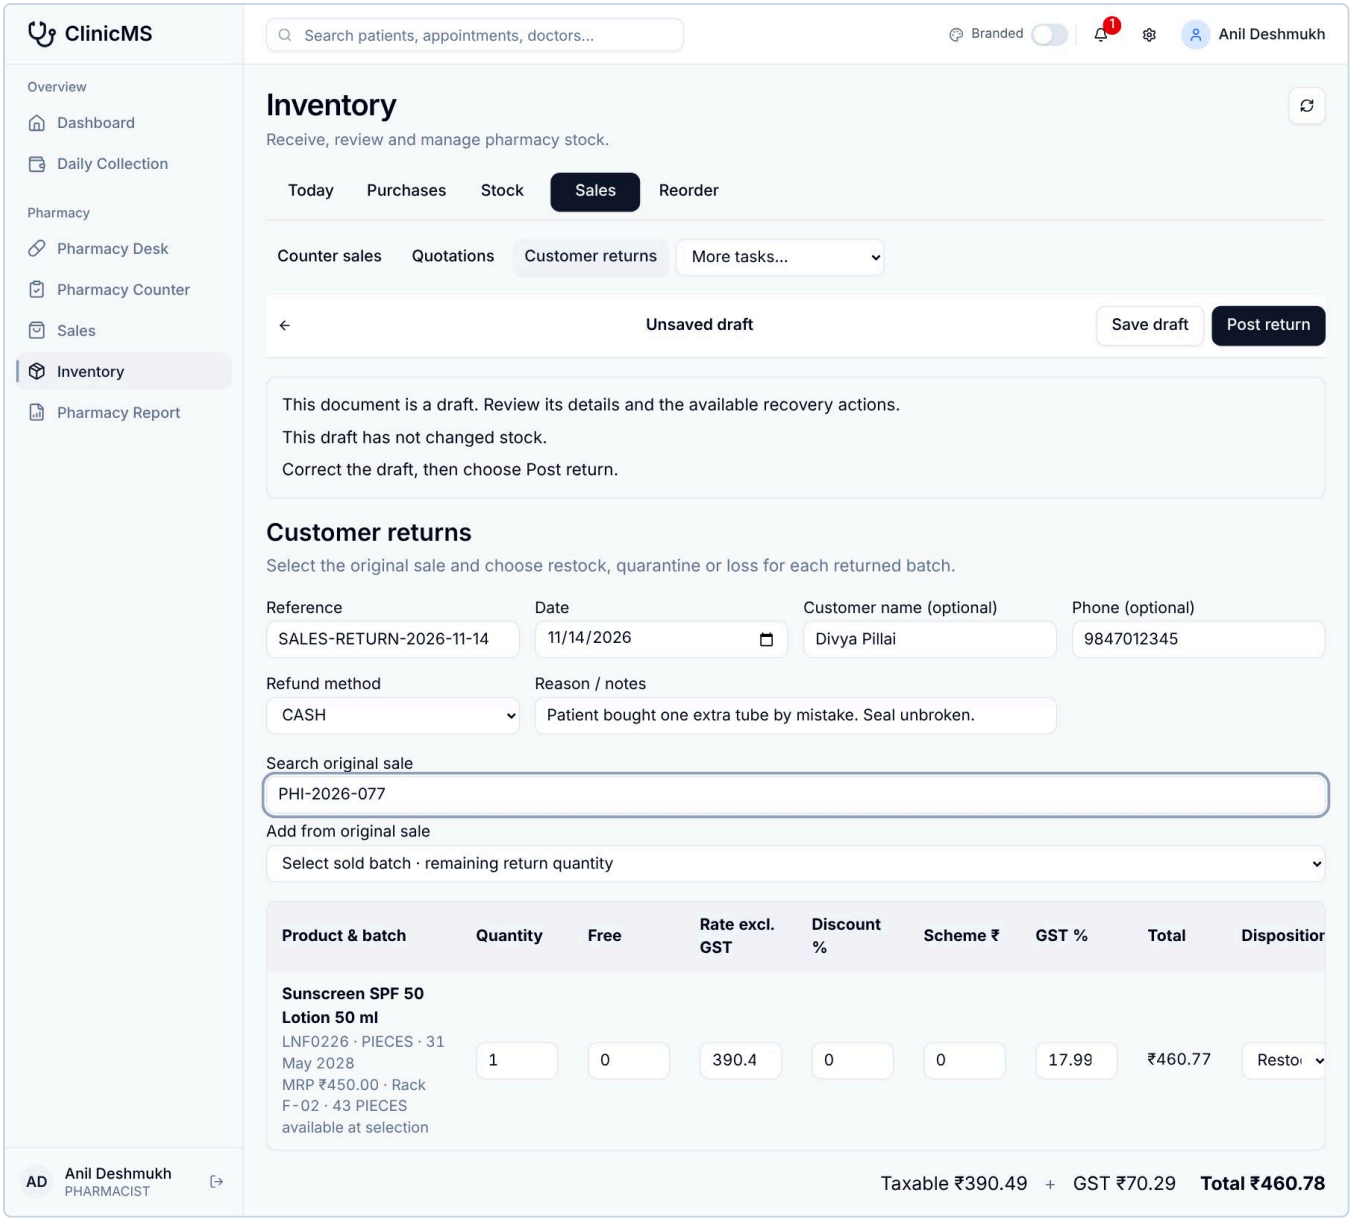

Figure 11.27. A return of one sunscreen against the original bill, refunded in cash.

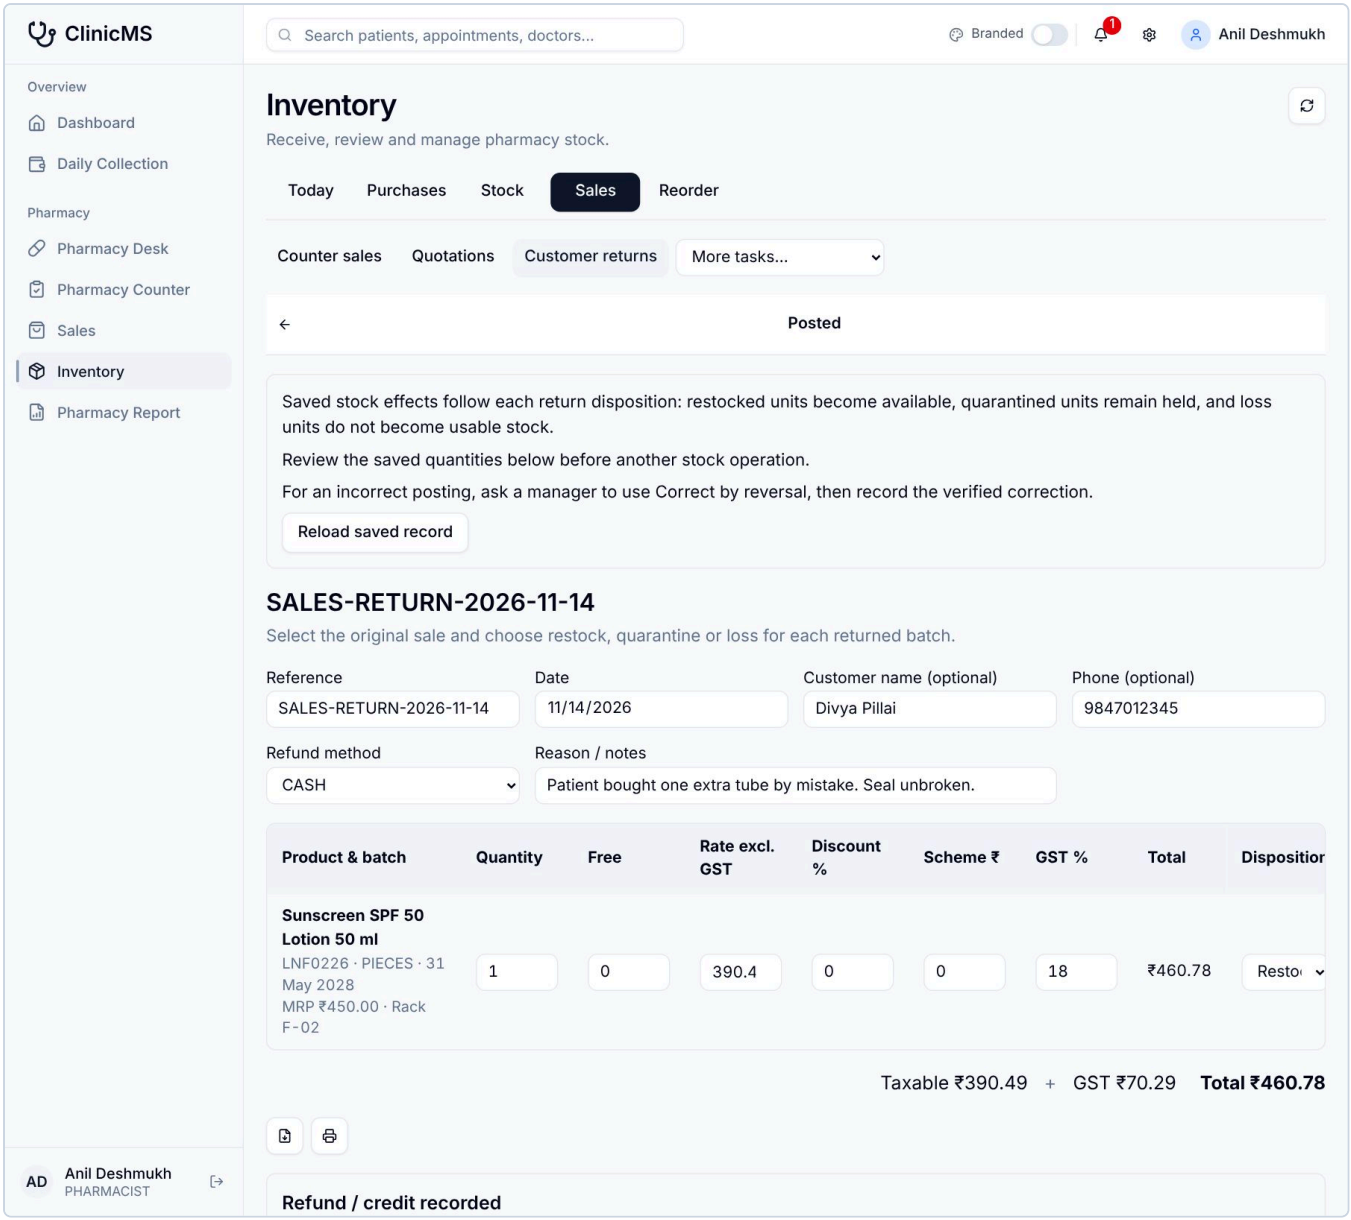

Figure 11.28. The posted return, with the refund recorded.

> **TAKE CARE**
> Posting a return puts restocked medicines back into stock and records the refund. It cannot be edited afterwards.

11.18 See returns

WHO USES THIS Pharmacists, admins

The **Returns** tab lists money and medicines given back to customers. It has the same search, period and filters as the Sales tab. Its extra column **Against bill** shows which bill each return was made against, and the **Refund** column shows how the money went back. **Store credit** means the refund was kept as credit for the patient.

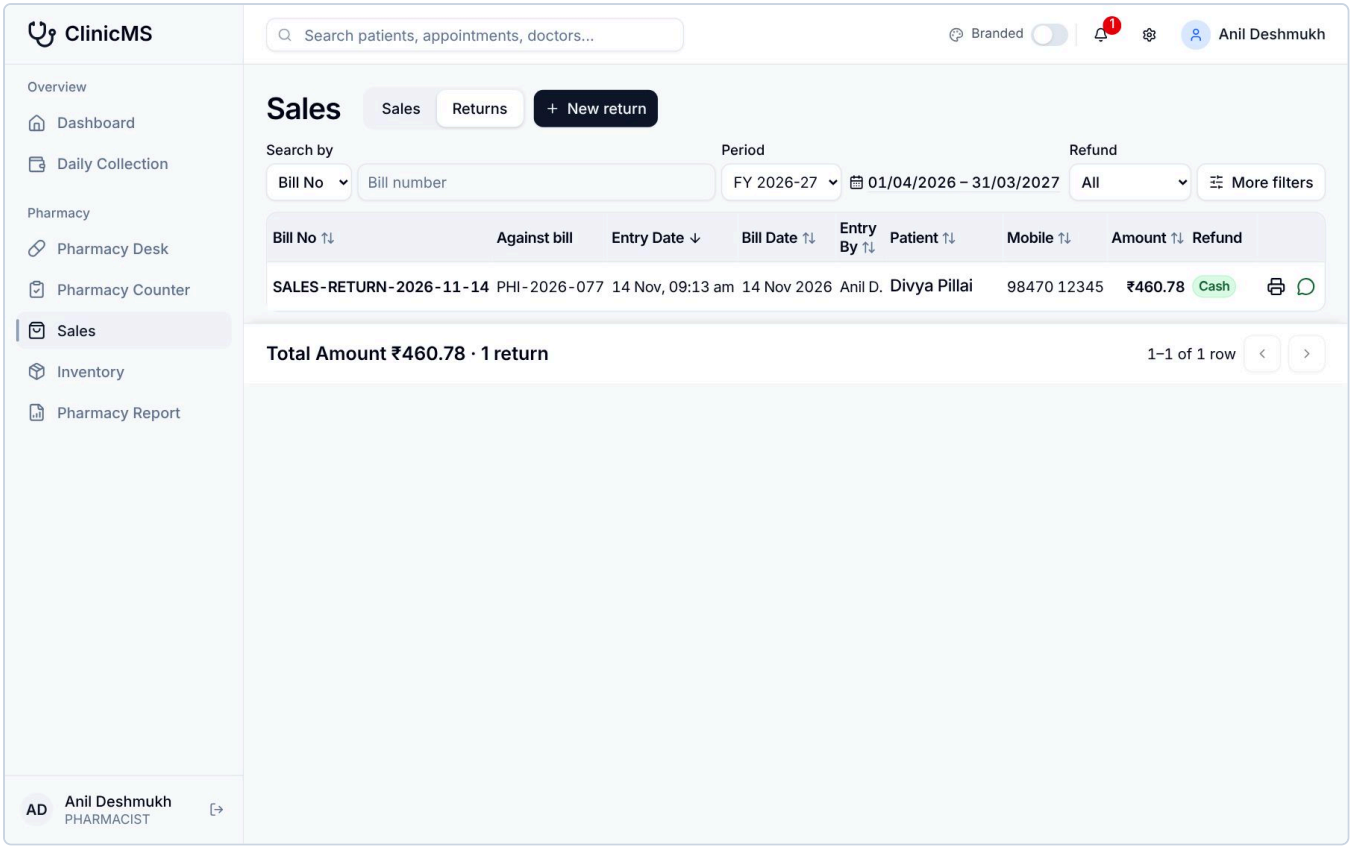

Figure 11.29. The Returns tab.

CHAPTER 12

Inventory: today and stock

The **Inventory** page is where the pharmacy receives, checks and corrects its stock. It has five areas across the top: **Today**, **Purchases**, **Stock**, **Sales** and **Reorder**. This chapter covers Today and Stock: finding a batch, correcting it, getting price and stock changes approved, counting the shelves and recording losses. The next two chapters cover Purchases, Reorder and Sales. Pharmacists do most of this work. Doctors and admins approve the changes that alter stock or price.

12.1 Find your way around Inventory

WHO USES THIS Pharmacists, reception, doctors, admins

Open **Inventory** from the menu. The page always opens on **Today**, a short list of the work waiting for you. The five buttons under the page title switch between the areas. Each area has its own row of tasks. Tasks that do not fit in the row are in the **More tasks…** list at the end of the row.

The page remembers where you are in its address. If you open a medicine and then press the browser's Back button, you return to the same list with the same filters. The round arrow at the top right reloads everything on the page.

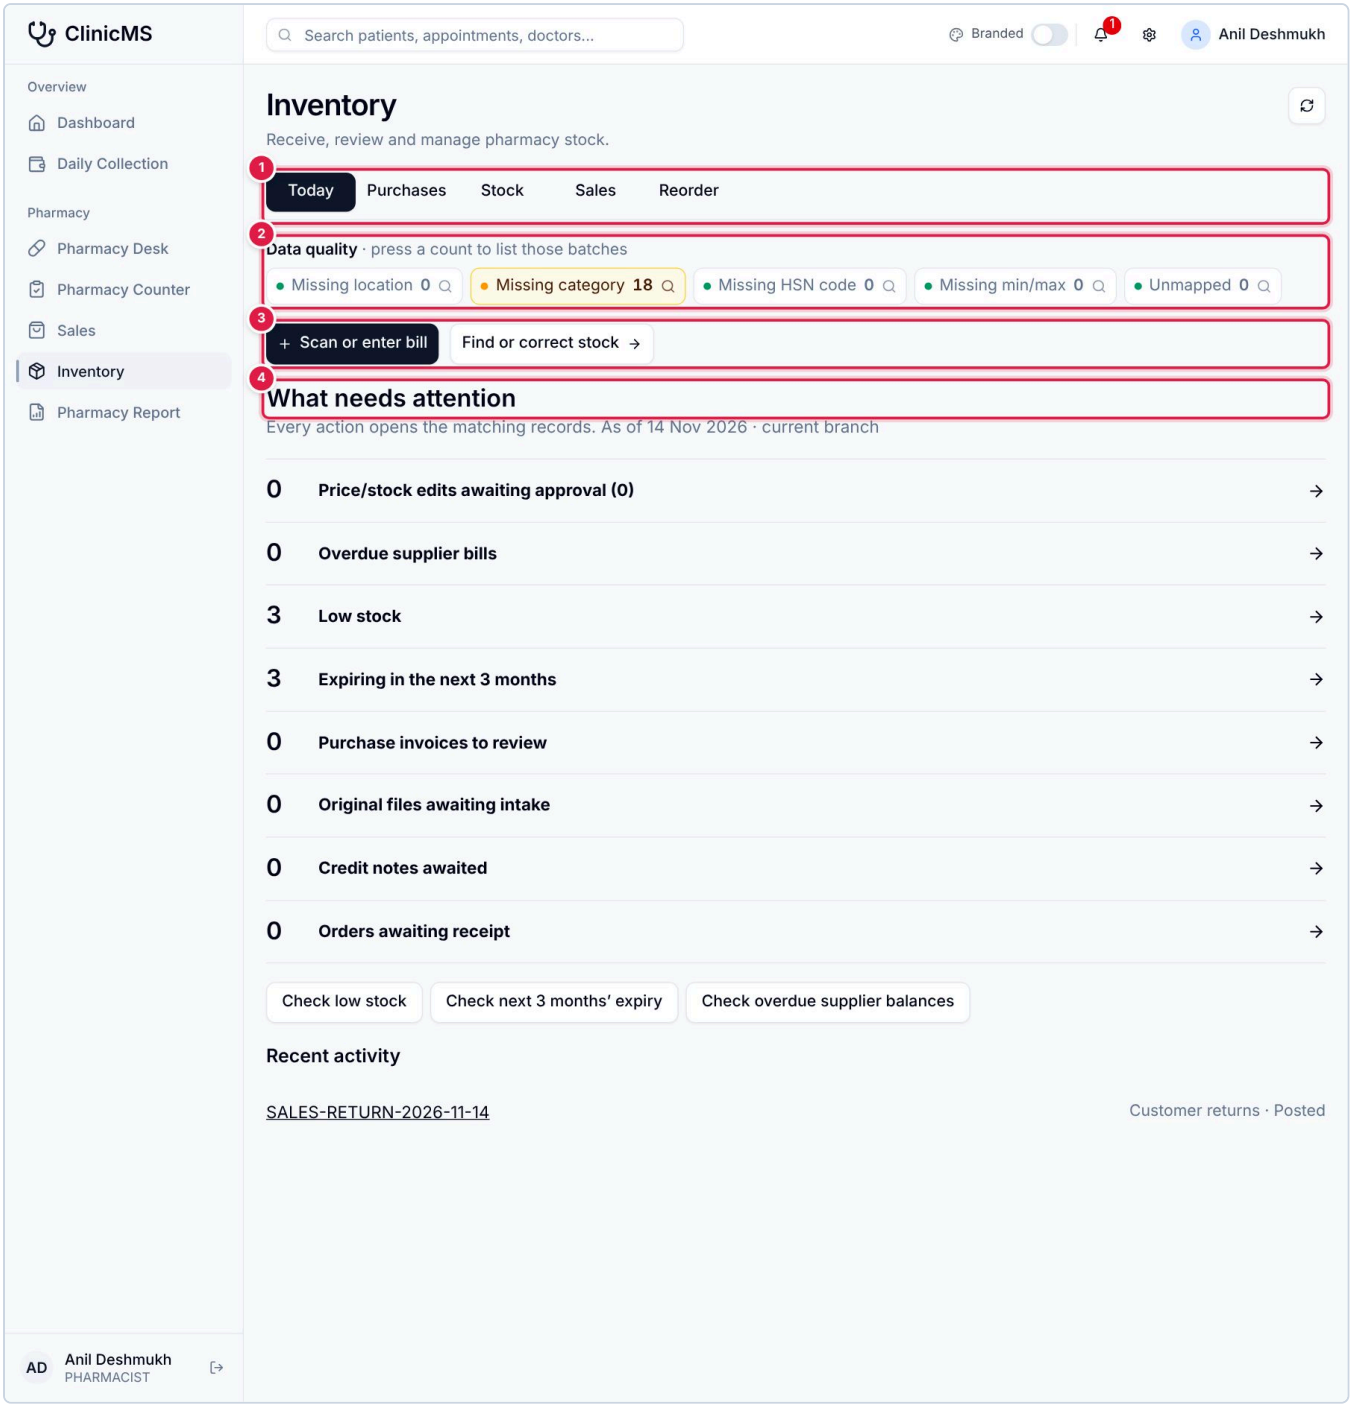

Figure 12.1. Inventory opens on Today. (1) the five areas, (2) data quality counters, (3) the two everyday tasks, (4) what needs attention.

ON THE SCREEN	WHAT IT MEANS
Today	What needs attention now, with a count for each kind of work. See the next sections.
Purchases	Supplier bills, payments, supplier credit notes, returns to suppliers and supplier details. See the chapter Inventory: purchases.
Stock	The stock list, each medicine's batches and history, approvals, stock counts, losses and holds. This chapter.

Sales	Counter sales, quotations and customer returns recorded from Inventory. See the chapter Inventory: reorder and sales.
Reorder	The shortbook, purchase orders and the stock levels that trigger reordering. See the chapter Inventory: reorder and sales.

12.2 Check data quality

WHO USES THIS Pharmacists, admins

The **Data quality** row shows five counters. Each counts the batches in stock that are missing a piece of information. A counter with nothing missing is grey with a green dot. A counter that needs work is coloured: red when the gap can stop a correct GST bill or a stock match, amber when it is housekeeping.

Click a counter to open the stock list showing only those batches. The counter stays highlighted. Click it again to show all stock. Fix each batch with **Edit item** on its page (see *Correct the details of a batch*).

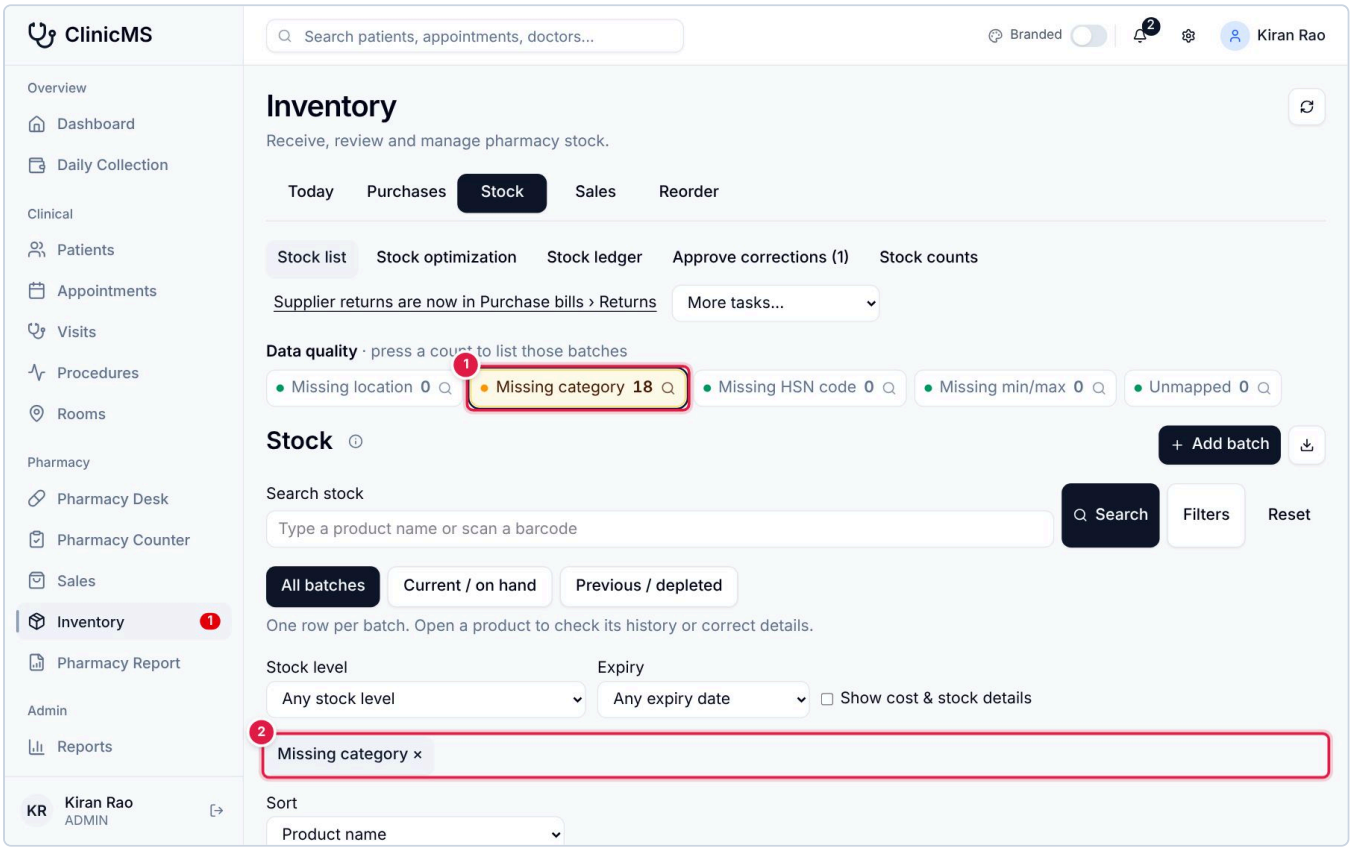

Figure 12.2. After clicking Missing category: the counter is highlighted (1) and the list shows only those batches. The filter also appears as a chip (2); click it to remove the filter.

COUNTER	WHAT IT LISTS
Missing location	Amber. No rack or shelf is saved, so staff cannot find the batch quickly.
Missing category	Amber. No category, so category filters and reports leave it out.

Missing HSN code	Red. GST bills need the HSN code.
Missing min/max	Amber. No minimum or maximum stock level, so low-stock alerts and reordering cannot work.
Unmapped	Red. The batch is not linked to a medicine in the product list, so prescriptions and sales cannot find it.

12.3 Work through What needs attention

WHO USES THIS Pharmacists, admins, doctors

Each row of **What needs attention** shows a number and a kind of work. Click the row to open exactly those records. Hold the mouse over a row to read a one-line explanation. A row with 0 has nothing waiting. Some rows only appear for people who can act on them.

Above the list are two buttons for the jobs done every day. **Scan or enter bill** opens supplier bill entry (see the chapter Inventory: purchases). **Find or correct stock** opens the stock list. Under the list, **Check low stock**, **Check next 3 months' expiry** and **Check overdue supplier balances** are shortcuts to the same lists as the matching rows. **Recent activity** lists the latest inventory documents, such as losses, holds and orders. Click one to open it.

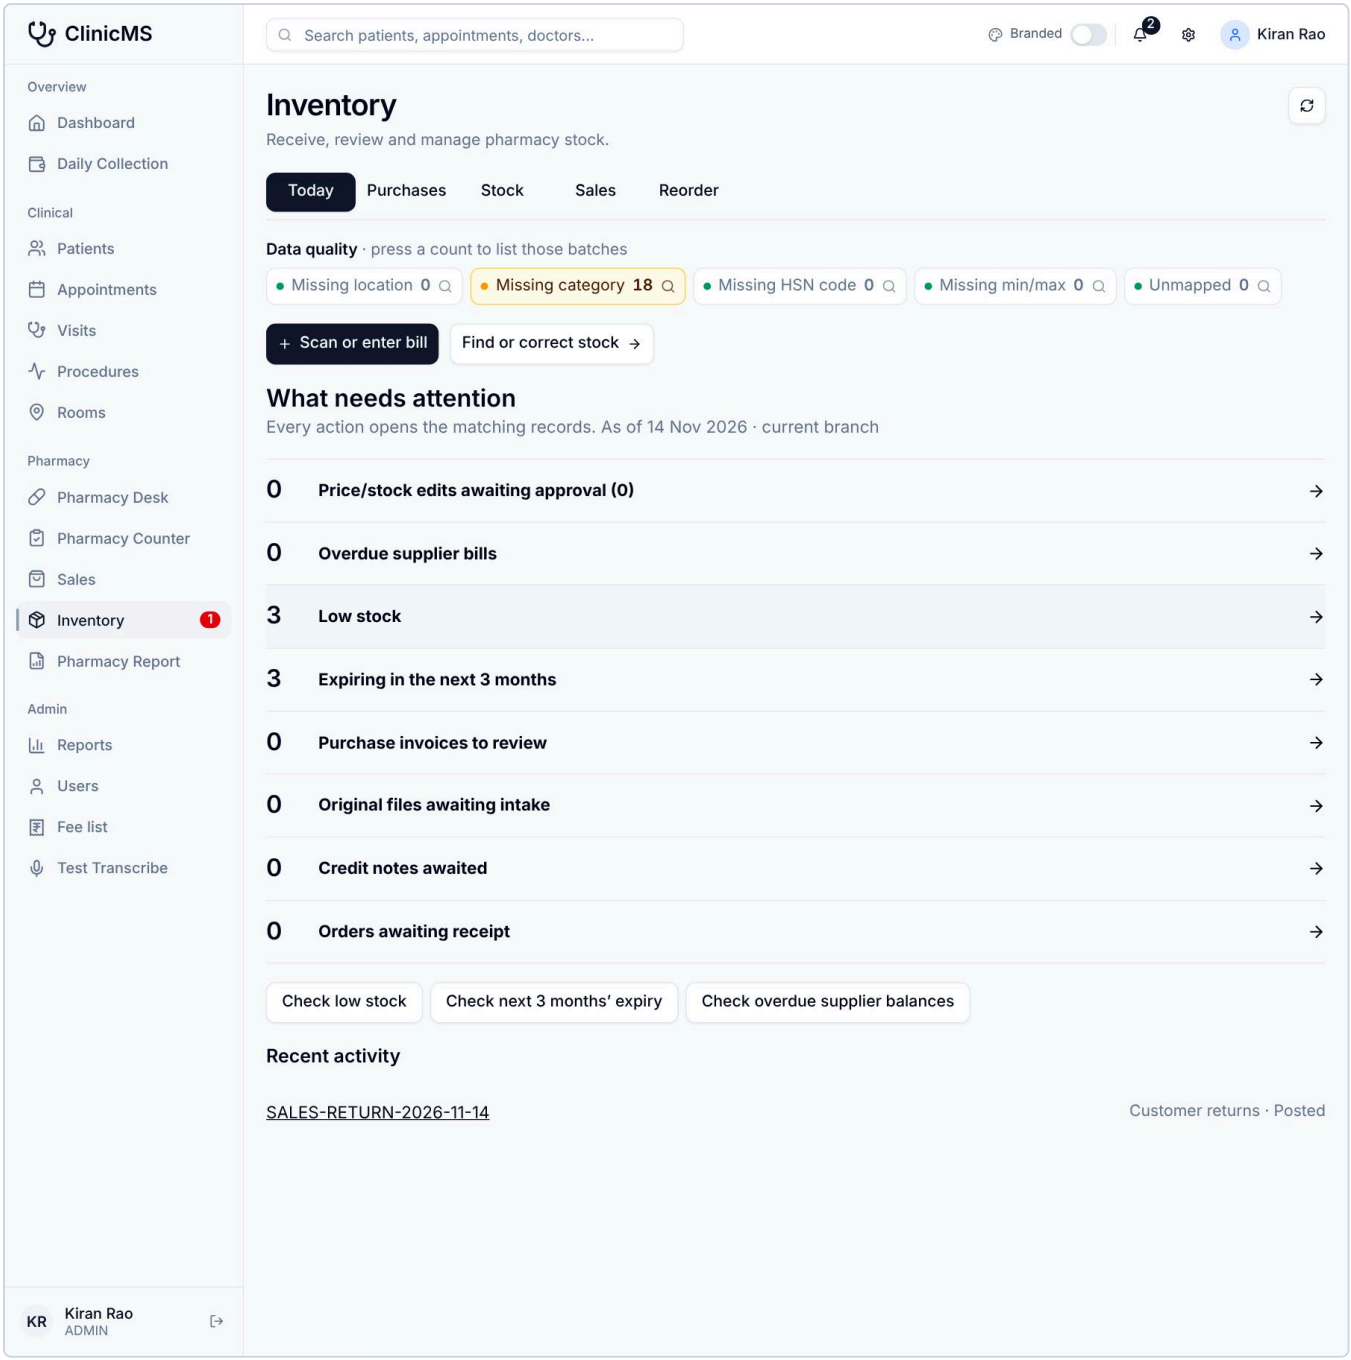

Figure 12.3. Today for an admin. Hold the mouse over a row to see what it counts.

ROW	WHAT IT COUNTS AND WHERE IT GOES
Price/stock edits awaiting approval	Price and stock changes sent by staff that a doctor or admin must approve. Opens Stock › Approve corrections.
Overdue supplier bills	Supplier bills past their due date, with the total outstanding. Opens Purchases › Payments & dues. Only shown when a bill is overdue.
Low stock	Batches whose available quantity is at or below the minimum saved for them. Opens the stock list filtered to Low stock.
Expiring in the next 3 months	Batches with stock that expire within three months. Opens the stock list filtered to that expiry window.

Purchase invoices to review	Supplier bills entered but not yet added to stock. Opens the purchase bill list filtered to Not posted.
Original files awaiting intake	Photos or PDFs of supplier bills that were uploaded but not yet turned into a bill. Opens Scan or enter bill.
Stock count due today	Shown to a person on the count rota. The number of items to count today. Opens your count.
Counts awaiting your approval	Shown to approvers. Signed-off counts that differ from the system, with the value short and extra. Stock changes only when you approve.
Batches not counted this cycle	Shown to whoever sets up counting, when the count cycle is behind. Opens the count settings.
Credit notes awaited	Goods returned to a supplier where the supplier's credit note has not arrived yet. Opens Purchases › Returns.
Orders awaiting receipt	Approved purchase orders whose goods have not all arrived. Opens Reorder › Purchase orders.

12.4 Find a medicine in the stock list

WHO USES THIS Pharmacists, reception, doctors, admins

Open **Stock**, then **Stock list**. The list has one row per batch, so a medicine with three batches has three rows. Click **Find or correct stock** on Today to get here too.

1. Type part of a product name, generic name, batch number, barcode or SKU in **Search stock**. You can also scan a barcode into the box.
2. Click **Search** or press Enter. The best matches come first. A row may say *Similar spelling* when the app corrected a typing mistake, or *Matched earlier name* when the medicine was renamed.
3. Use the three buttons **All batches**, **Current / on hand** and **Previous / depleted** to show every batch, only batches with stock, or only empty batches kept for history.
4. Use **Stock level** and **Expiry** to narrow the list, and **Sort** to change the order.
5. Click a product name to open its page.
6. Click **Reset** to clear the search and every filter.

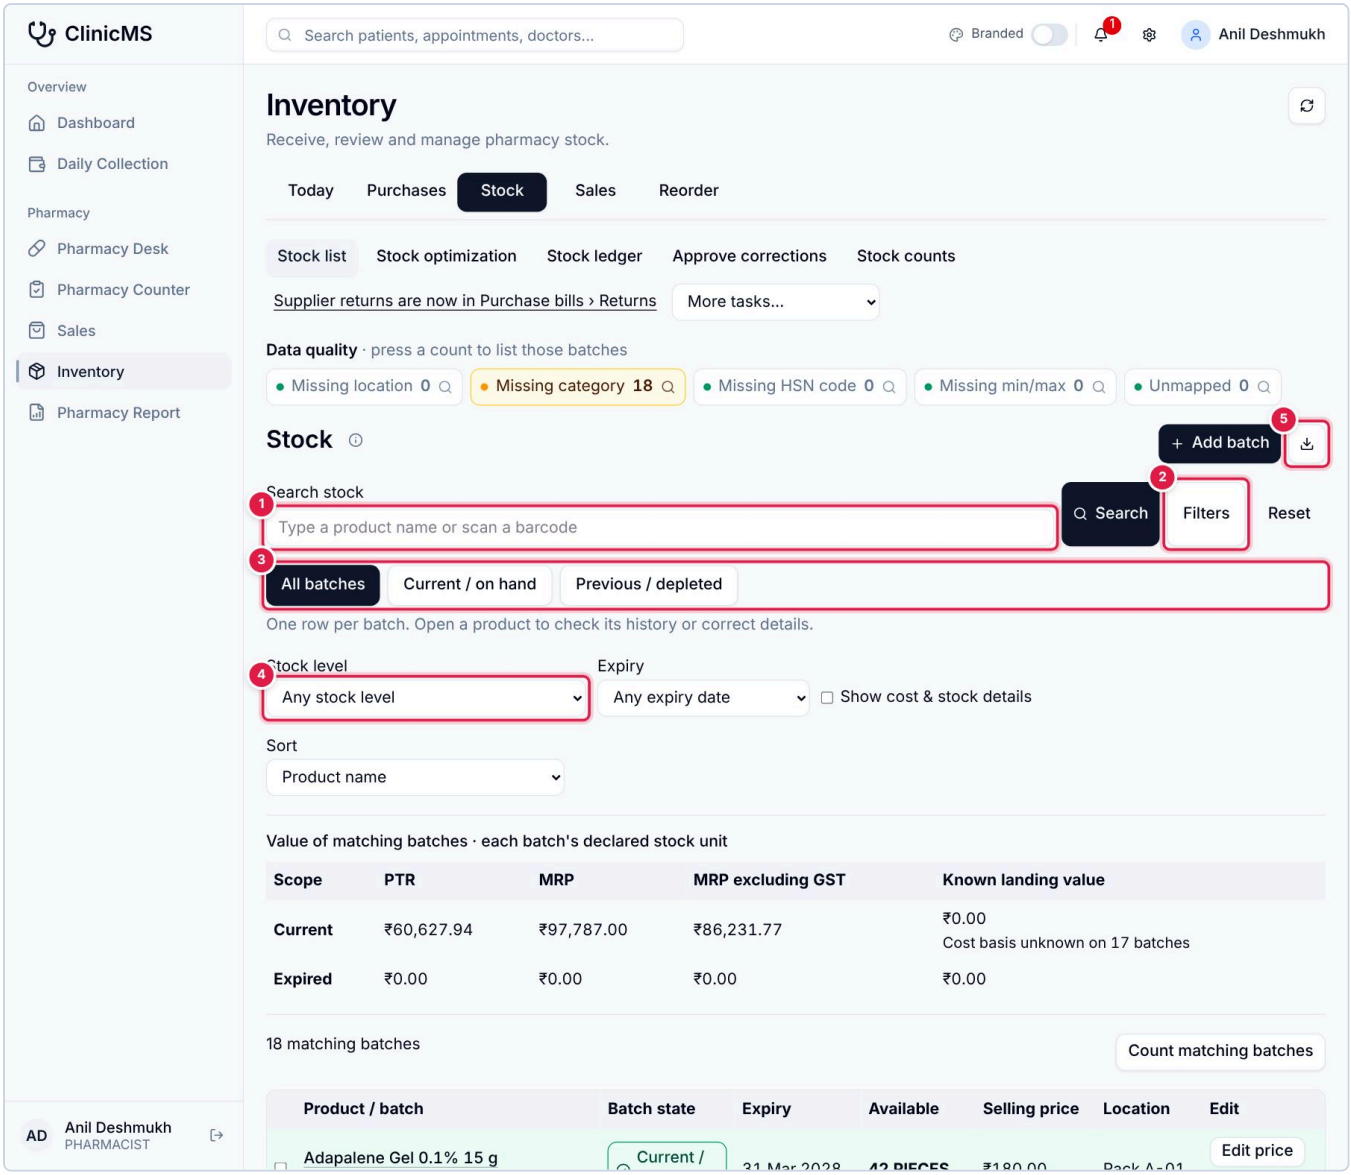

Figure 12.4. The stock list: (1) search, (2) Filters, (3) batch view, (4) stock level and expiry, (5) export. The batches are listed below.

CONTROL OR COLUMN	WHAT IT DOES
Stock level	**Low stock** (at or below minimum), **Above maximum**, **Stock on shelf** (more than zero), **Out of stock**, **Negative — count needed**, **Set aside / held** and **Expired**.
Expiry	Batches that expire within 1, 2, 3 or 6 months.
Sort	**Best match** (after a search), **Product name**, **Expiry date**, **Available stock** or **Purchase price**.
Value of matching batches	The value of the batches in the list, for current and expired stock: at PTR (the price to retailer you pay), at MRP, at MRP without GST, and at the known landing cost. A note says how many batches have no cost saved.
Product / batch	The product name, the pack, and the batch number. Click the name to open the product page.

Batch state	A coloured label. See *What the colours mean* below.
Expiry	The expiry date printed on the batch. *Unverified* means no expiry is saved.
Available	Units you can sell now, in the batch's stock unit. Units set aside are shown under it.
Selling price	The price charged per stock unit.
Location	The rack or shelf. *Not assigned* if none is saved.
Edit	**Edit price** and **Edit stock** send a change for approval. See *Change a price or a stock quantity*.

> **TIP**
> The search box also opens documents directly: type or scan the code printed on an inventory document or a purchase bill label to jump to it.

12.5 What the colours mean

WHO USES THIS Everyone who uses stock

Each batch row is tinted, and the same colour appears on its **Batch state** label. The label always says the state in words, so you never have to rely on the colour alone.

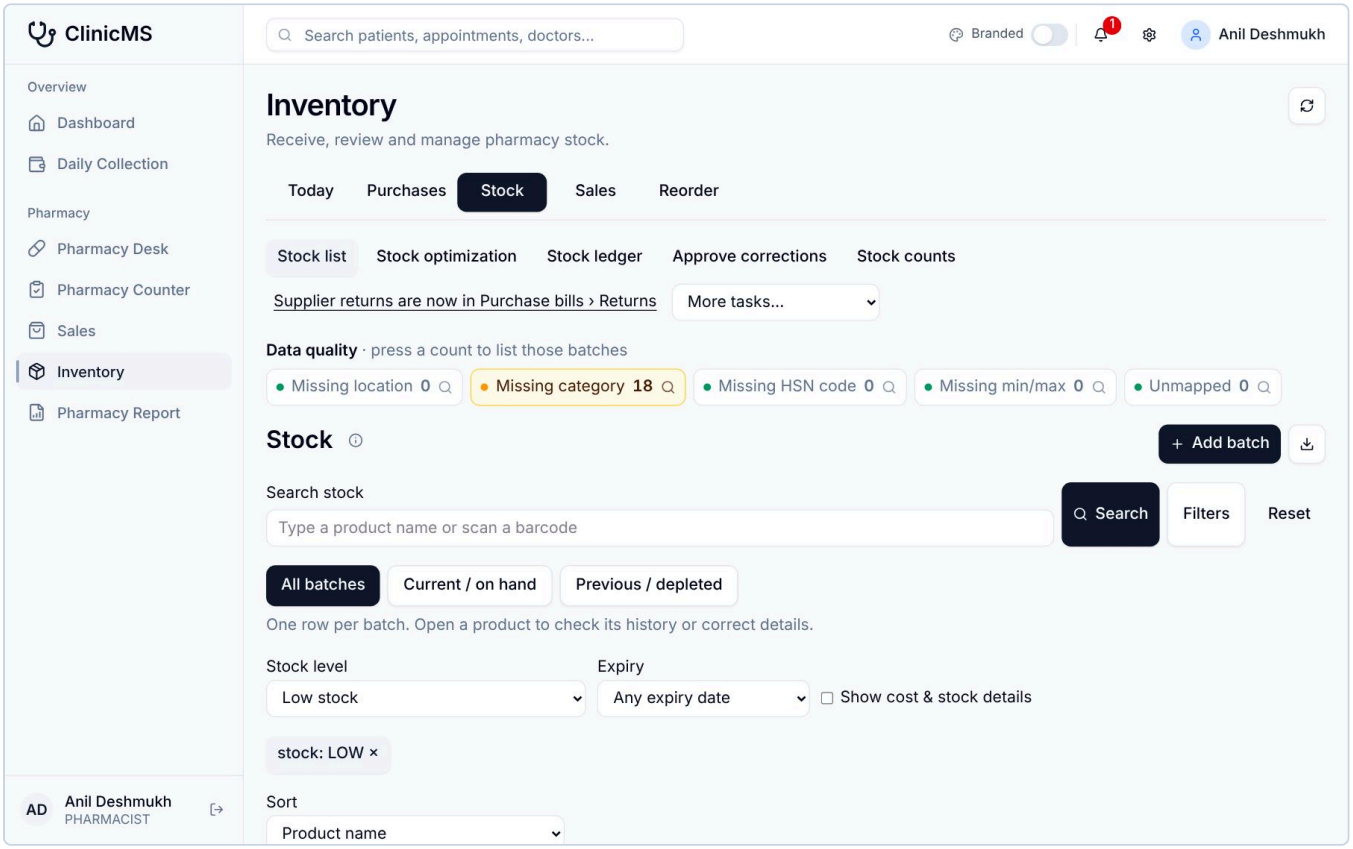

Figure 12.5. Stock level set to Low stock. Clindamycin and Minoxidil are at or below their minimum.

LABEL (COLOUR)	MEANING
Current / on hand (green)	Stock on the shelf, in date and available. Green means stock is there, not that someone has checked it.
Held, on hand (amber)	All the stock in the batch is set aside and cannot be sold. See *Block stock from sale*.
On hand, expiry unverified (amber)	Stock is there but no expiry date is saved. Check the pack and correct the batch.
Inactive, on hand (amber)	The item is marked inactive or discontinued but still has stock.
Expired, on hand (red)	The batch is past its expiry date and still has stock. Remove it with a loss or a supplier return.
Negative stock — count needed (red)	The system shows less than zero. Count the batch to correct it.
Previous / depleted (grey)	The batch is empty. It is kept for history.

12.6 Use more filters, cost columns and bulk actions

WHO USES THIS Pharmacists, admins

Click **Filters** to show more ways to narrow the list. The choices in each drop-down come from your own stock, so you only see values that exist. Text boxes such as **HSN or MISSING** accept the word MISSING to list batches where that detail is empty.

Tick **Show cost & stock details** to add the columns **Physical** (units on the shelf), **Held** (units set aside), **Stock unit**, **Purchase cost** and **MRP**.

Tick the box at the start of one or more rows to act on them together. **Set location for N selected batches** moves them to a new rack or shelf: type the location and a reason, then click **Apply reviewed location**. Stock does not change. **Count selected batches** starts a stock count for just those batches. With nothing ticked, the button reads **Count matching batches** and counts everything the filters show.

The download arrow at the top right saves every matching batch, all pages, as a spreadsheet file (CSV).

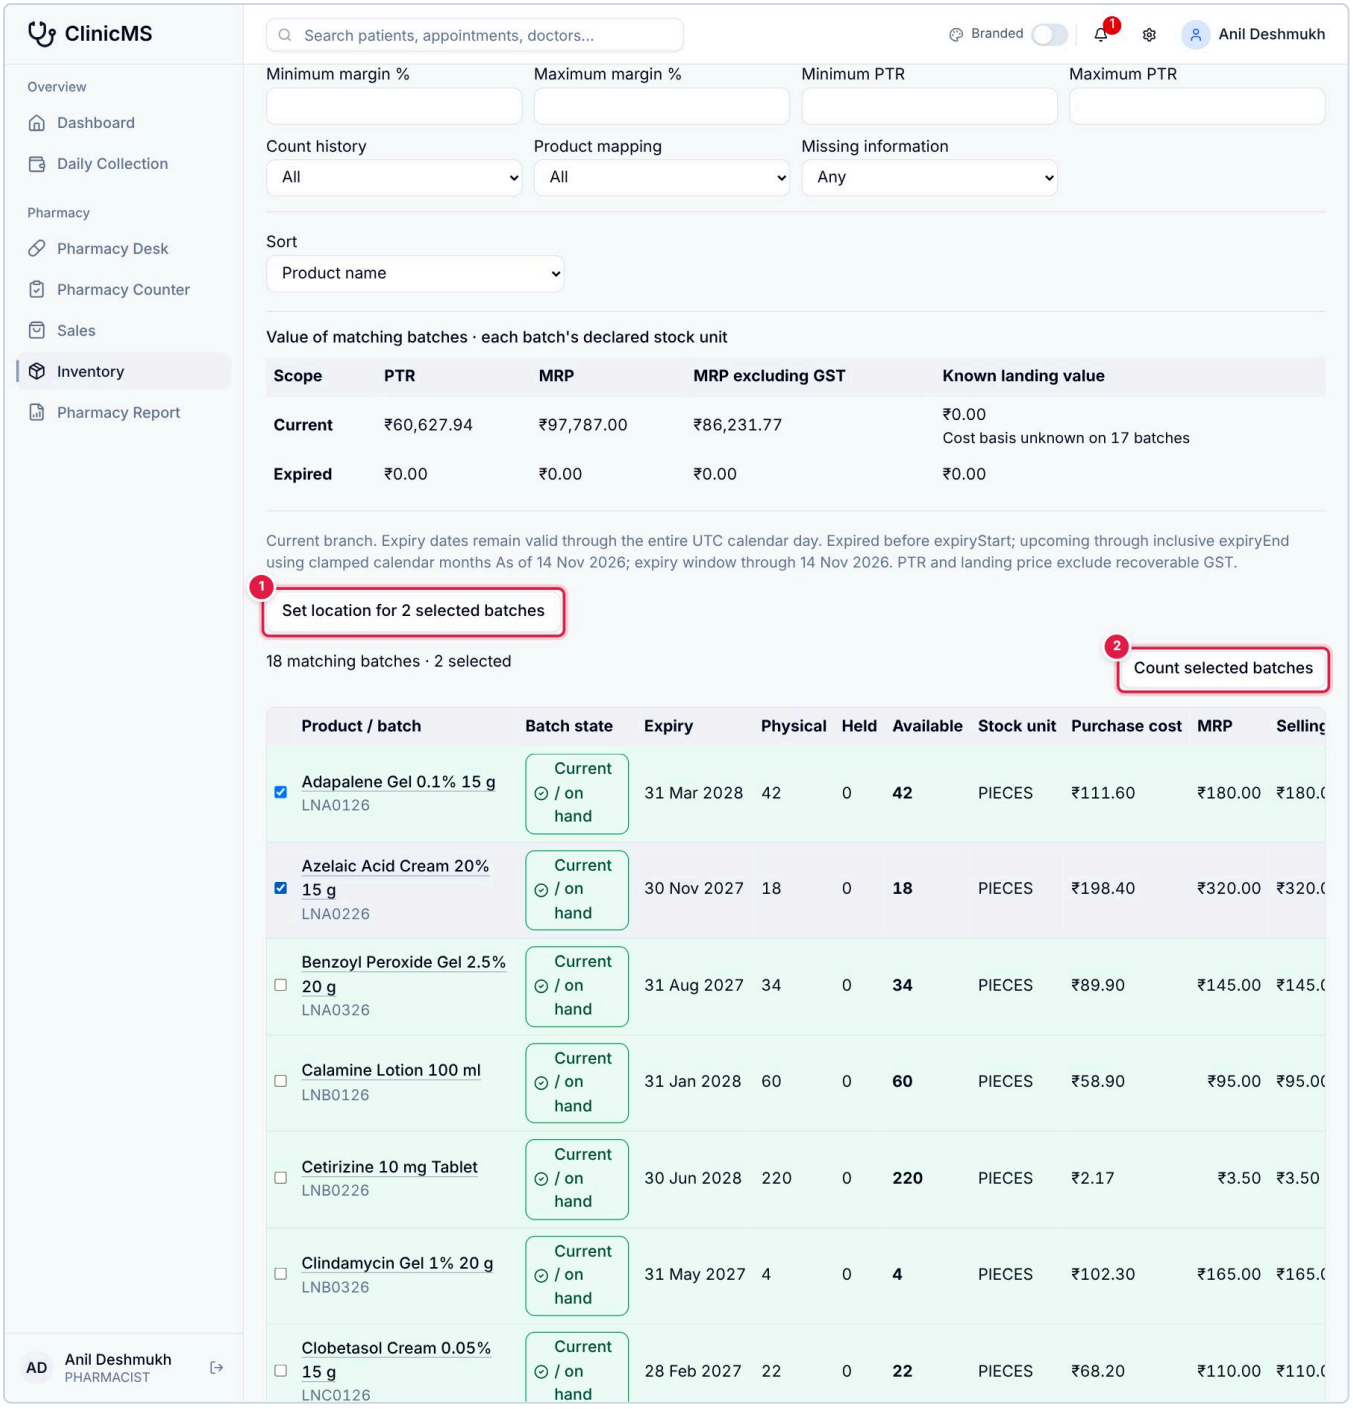

Figure 12.6. Filters open, cost and stock details shown, and two batches ticked.

FILTER	HOW TO USE IT
Category, Subcategory, Product type, Stock unit, Manufacturer, Supplier, Rack / shelf / bin, Item status	Pick one value from the list.
Dosage form, Schedule	Type the form (for example cream) or the drug schedule.
HSN or MISSING, GST rate or MISSING	Type a code or rate, or MISSING.

Minimum / Maximum margin %	Batches whose margin between cost and selling price is in this range.
Minimum / Maximum PTR	Batches whose purchase price is in this range.
Count history	**Not counted**, **Counted**, **Pending**, **Completed** or **Blocked**.
Product mapping	**Mapped**, **Unmapped** or **Waiting for mapping** to a product in the medicine list.
Missing information	Lists each missing detail with the number of batches missing it.

12.7 Open a medicine's page

WHO USES THIS Pharmacists, doctors, admins

Click a product name in the stock list to open its page. The page describes the medicine across all its batches, and keeps the batch you clicked as the *opened batch*. **Back to stock list** returns to the list with your filters.

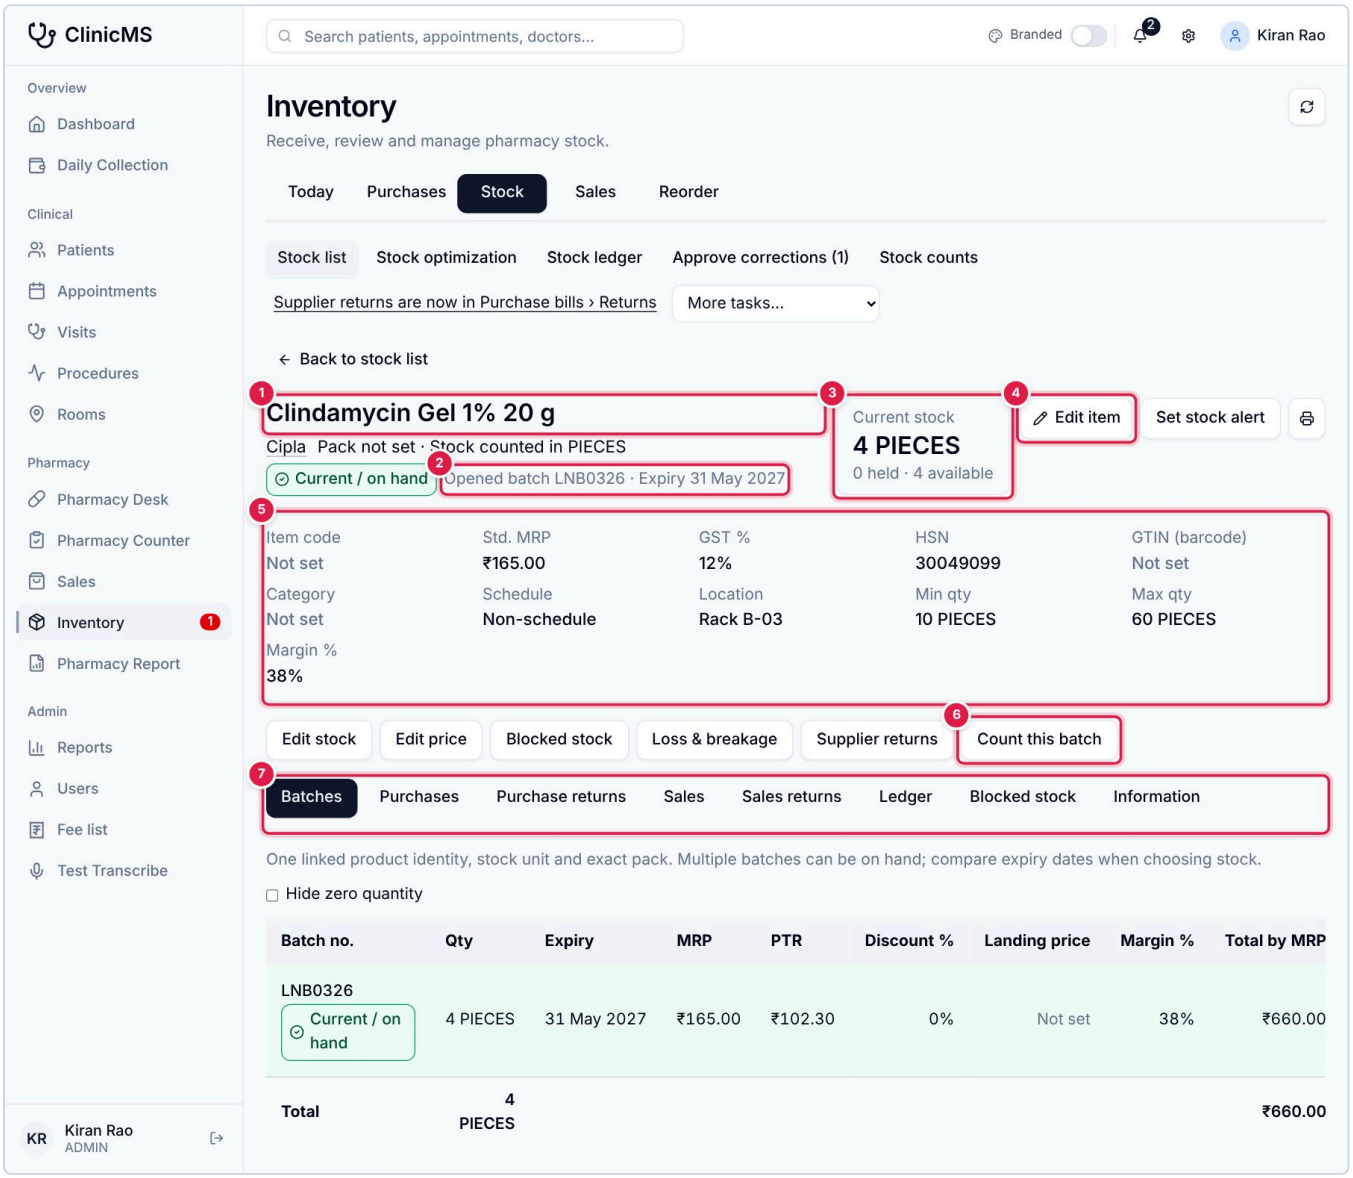

Figure 12.7. The page for Clindamycin Gel, with its parts numbered.

PART	WHAT IT SHOWS
1. Name and maker	The product name, the manufacturer (click it to list everything from that maker), the pack and the stock unit.
2. Opened batch	The state label, batch number and expiry of the batch you opened.
3. Current stock	Units on the shelf across all batches, how many are held and how many are available. Click it to show the batches.
4. Edit item, Set stock alert, print	Correct the batch details, set minimum and maximum levels, or print a shelf label for the opened batch.
5. Item details	Item code, standard MRP, GST %, HSN, barcode, category, schedule, location, minimum and maximum quantity and margin. *Not set* means the detail is missing.
6. Actions	**Edit stock**, **Edit price**, **Blocked stock**, **Loss & breakage**, **Supplier returns** and **Count this batch**. Each starts the matching task for this batch.
7. History tabs	Batches, Purchases, Purchase returns, Sales, Sales returns, Ledger, Blocked stock and Information.

> **TIP**
> Staff who cannot count stock see a **Batch recovery reference** box instead of the count button. Copy the reference and send it to a colleague who can count, if the batch looks wrong.
>
> If a batch is linked to more than one product, a box asks you to choose the product printed on the physical pack, give a reason and tick to confirm. This fixes the link without changing stock.

12.8 Check the batches of a medicine

WHO USES THIS Pharmacists, admins

The **Batches** tab lists every batch of the medicine, with its quantity and prices. Several batches can be on hand at once; compare expiry dates and sell the earliest first. Tick **Hide zero quantity** to hide empty batches. The **Total** row adds up quantity and value.

Each row has buttons. **Open** switches the page to that batch. **Edit** corrects that batch's details. The printer prints its shelf label. **Delete** removes a batch record entirely. It only works for an empty batch with no history. Otherwise the button is greyed out and the reason is written under it, for example *Dispose or return remaining stock before deleting a batch*. Deleting asks you to confirm and cannot be undone.

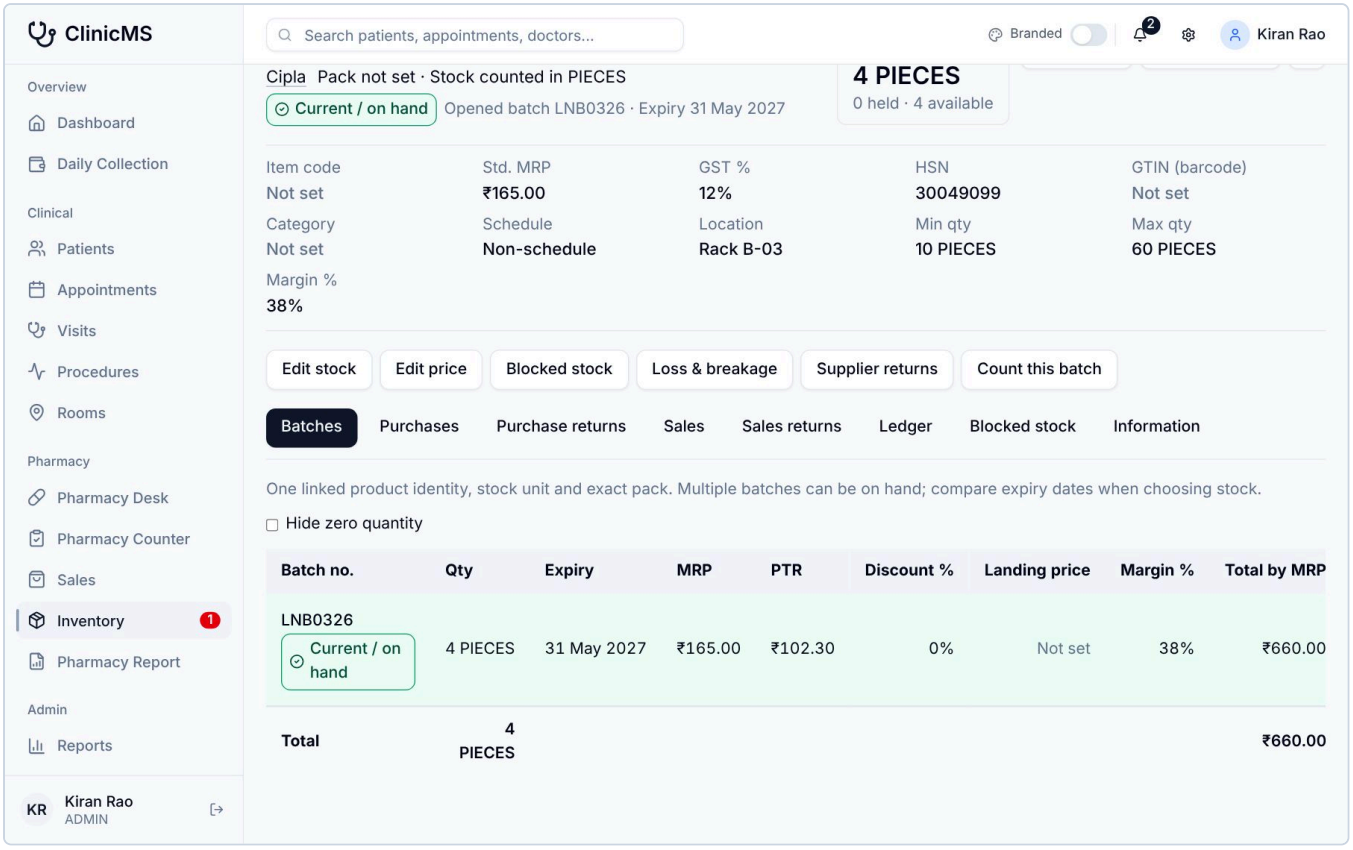

Figure 12.8. The Batches tab. Delete is greyed out because the batch still has stock, and the reason is shown.

COLUMN	MEANING
Qty	Units in the batch. Held units are shown in brackets.
MRP	Maximum retail price per stock unit.
PTR	Price to retailer: what the clinic paid per unit, before GST.
Discount %	The purchase discount on the supplier bill.
Landing price	The real cost per unit after discounts and free goods.
Margin %	The difference between cost and selling price, as a percentage.
Total by MRP / Total by PTR	Quantity multiplied by MRP or by PTR.
GST %	The GST rate charged on sale.

> **TAKE CARE**
> Deleting a batch cannot be undone. Use it only for a batch entered by mistake.

12.9 Correct the details of a batch

WHO USES THIS Pharmacists, admins

Use **Edit item** (or **Edit** on a batch row) when a detail was entered wrongly: the name, batch number, expiry date, rack, manufacturer, category, HSN, GST rate, barcode or the default dosage used when prescribing. These corrections save straight away and do not change the stock quantity or the selling price.

The window shows **Correct saved details**. Open **More details: tax, stock limits & codes** for the less common fields and the **Availability** choice (Active, Inactive or Discontinued). As you type, a before-and-after list shows exactly what will change.

1. Open the medicine and click **Edit item**.
2. Change the details. Check them against the pack or the original bill.
3. Type the reason in **Why are you changing it?**.
4. Click **Save corrected details**. The page says *Corrected details saved. Stock quantity unchanged.*

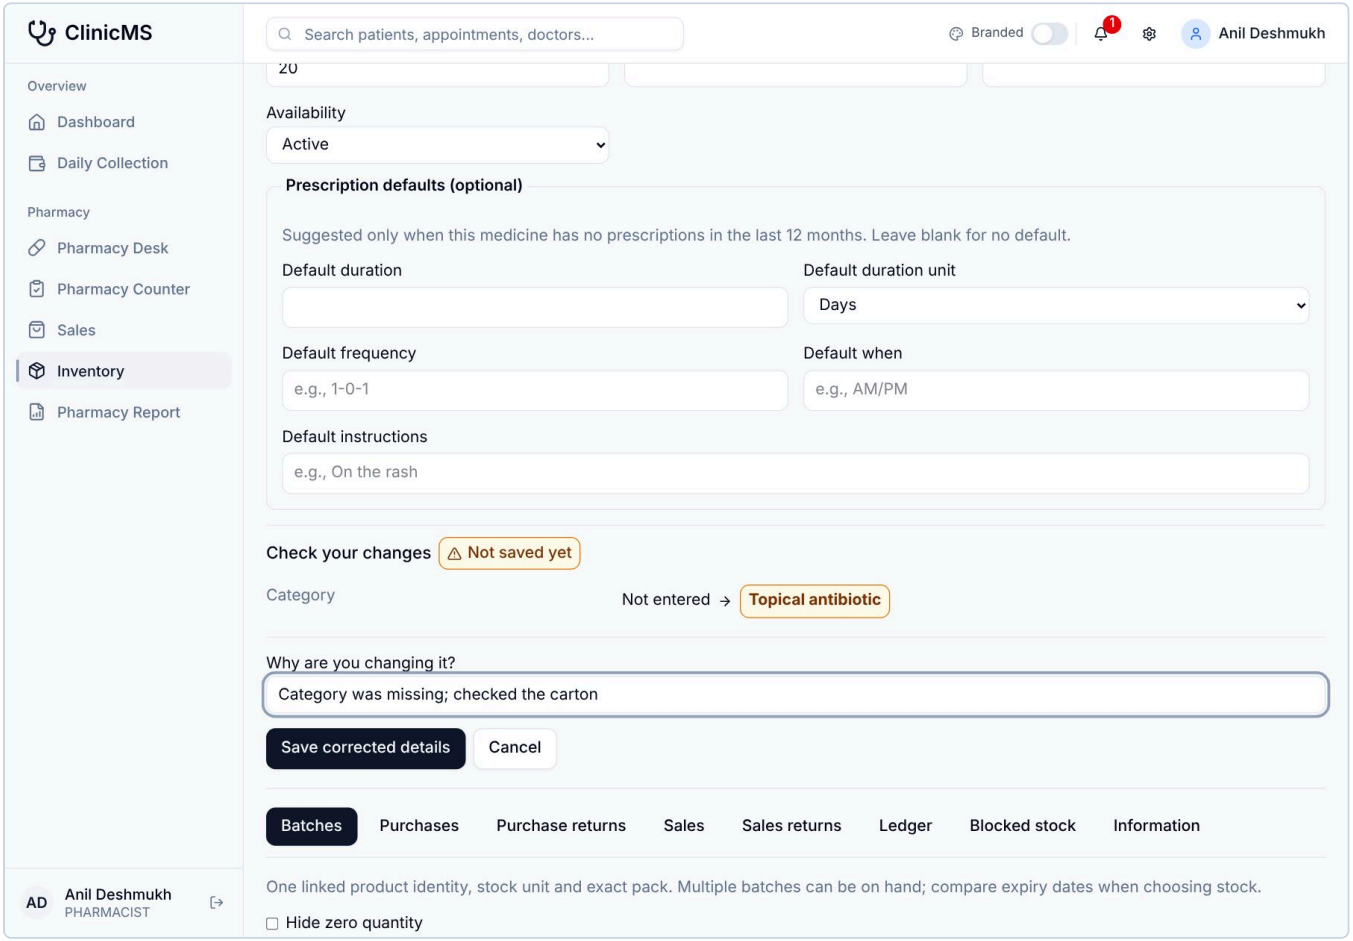

Figure 12.9. Correcting Clindamycin Gel: the category is added and the before-and-after list shows the change.

> **TIP**
> If you leave the page before saving, your typing is kept. When you come back the page says *Restored unsaved product details*.

12.10 Set minimum, maximum and reorder levels

WHO USES THIS Pharmacists, admins

The low-stock alert, the Low stock filter and reordering all use three numbers saved on each batch. Set them when you add a new medicine, and review them when demand changes.

1. Open the medicine and click **Set stock alert**. The details window opens with the stock limits shown.
2. Fill in **Minimum stock**, **Maximum stock** and **Reorder at**.
3. Type the reason, then click **Save corrected details**.

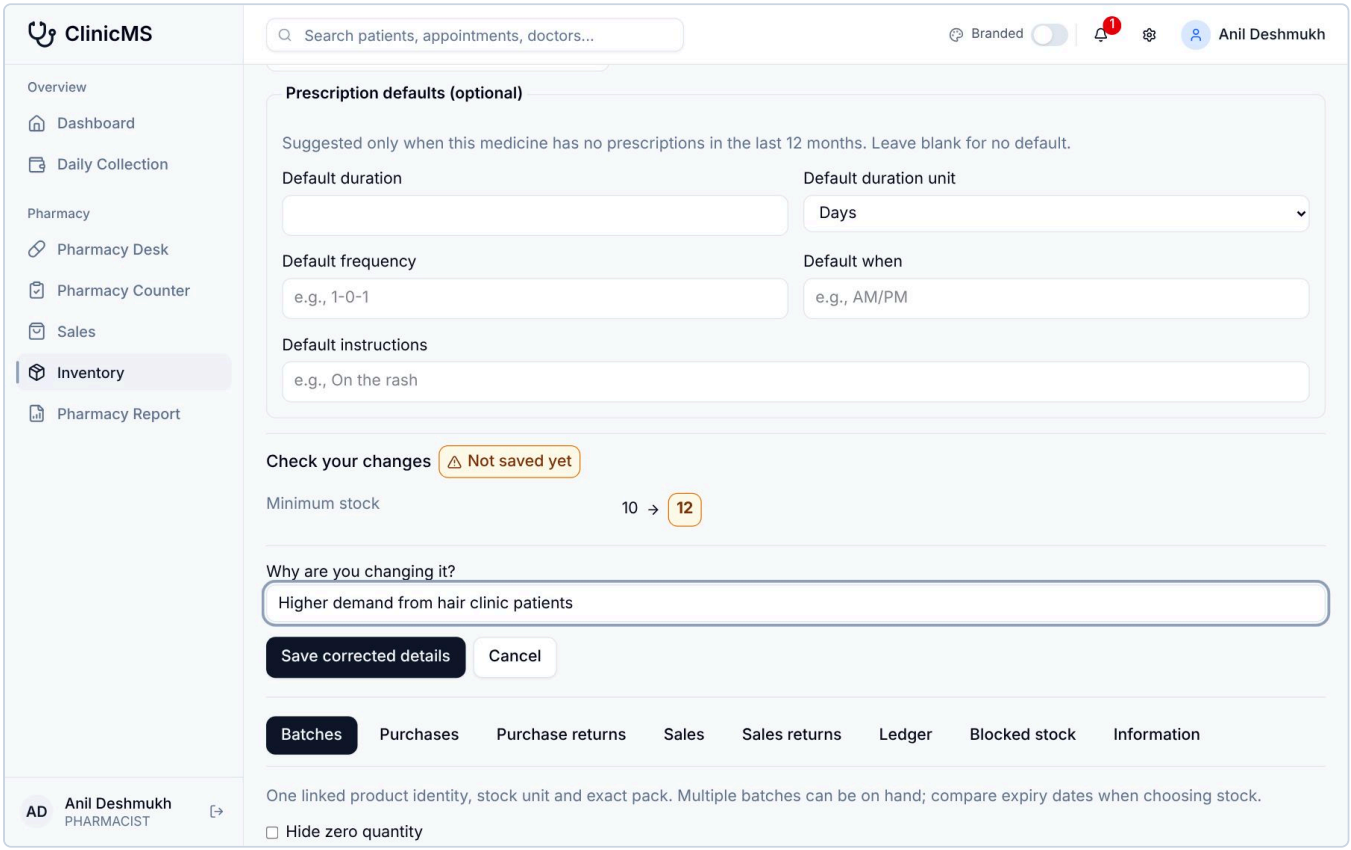

Figure 12.10. Set stock alert opens the stock limits.

ON THE SCREEN	WHAT IT MEANS
Minimum stock	When available stock falls to this number or below, the batch counts as low stock.
Maximum stock	The most you want on the shelf. Stock above it shows under **Above maximum**.

Reorder at	The level at which the item is added to the shortbook for reordering.

> **TIP**
> Reorder levels for many items at once are easier to set under Reorder › Manual targets & exclusions.

12.11 Change a price or a stock quantity

WHO USES THIS Pharmacists (doctors and admins approve)

A change to a selling price or to the number of units on the shelf needs a second person. The pharmacist proposes it with a reason, and a doctor or admin approves it. Until then nothing changes.

Use **Edit stock** when you counted a single batch and the shelf does not match. Enter the number you counted, including any units set aside. For a full shelf check use a stock count instead.

1. In the stock list, or on the medicine's page, click **Edit price** or **Edit stock**.
2. Type the new selling price, or the number of units you counted on the shelf. A box shows the old and new value.
3. Type the reason in **Why are you changing it?**.
4. Click **Submit for approval**. The page says *Submitted for doctor or admin approval*, with a link to the approval queue.

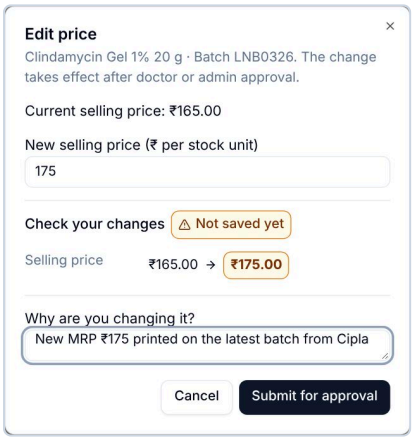

Figure 12.11. Edit price for Clindamycin Gel, ready to submit.

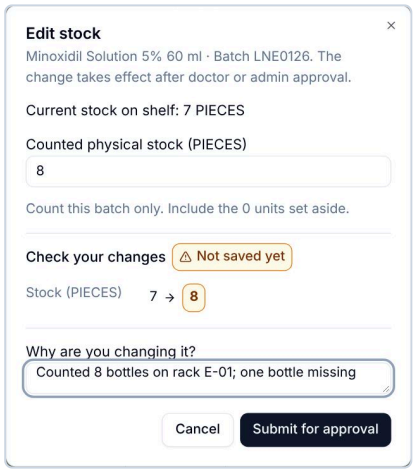

Figure 12.12. Edit stock from the stock list: 9 bottles on the system, 8 on the shelf.

12.12 Approve or reject price and stock changes

WHO USES THIS Doctors, admins

Open **Stock**, then **Approve corrections**. The task shows a count in brackets when new medicines are waiting. It has two tabs: **Price / stock** for changes to existing batches, and **New items** for medicines staff asked to add. Today also shows **Price/stock edits awaiting approval** with the count.

Each request in the **Price / stock approval queue** shows the medicine and batch, the old and new value, who asked and their reason. Pharmacists see the same queue so they can follow their requests, but only doctors and admins see the **Approve** and **Reject** buttons.

1. Read the reason and the old and new values.
2. Click **Approve** or **Reject**.
3. Type a **Review note** if you want to explain the decision. It is optional.
4. Click **Approve** or **Reject** in the window. An approved change updates the batch at once and is recorded in its ledger as *Approved stock edit*.

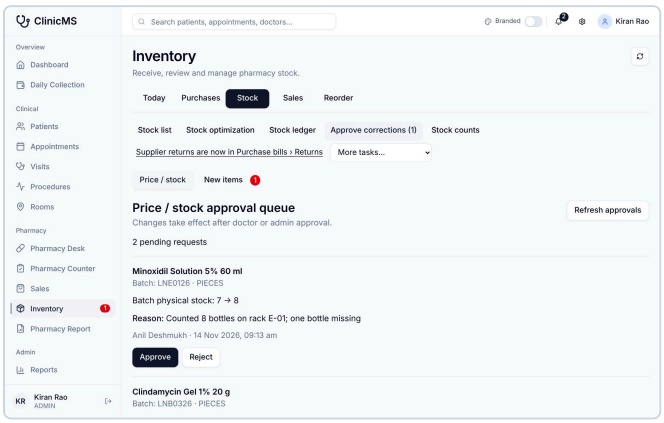

Figure 12.13. The price and stock approval queue, with the two requests sent by the pharmacist.

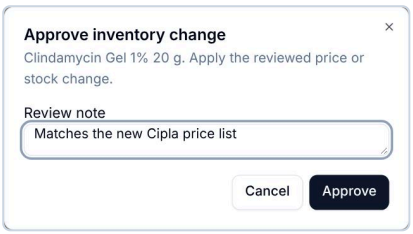

Figure 12.14. Approving the price change, with a review note.

> **TIP**
> If the batch changed after the request was sent, for example because a sale was made, the app refuses to apply an out-of-date stock request. Ask for a fresh request.

12.13 Approve new medicines added by staff

WHO USES THIS Doctors approve; pharmacists and reception request

When a pharmacist or receptionist adds a new medicine with **Add batch** on the stock list, it does not enter stock straight away. The window says *Sent to doctor for approval*. If a similar medicine already exists, the request carries a warning so the doctor can spot a duplicate.

The doctor opens **Stock › Approve corrections**, then the **New items** tab. The tab shows a red count when requests are waiting. Each request shows the medicine details and who asked. Click **Approve** to add it to inventory, or **Reject** and give a note such as *Duplicate of an existing 120 ml pack*. **History** lists requests already decided.

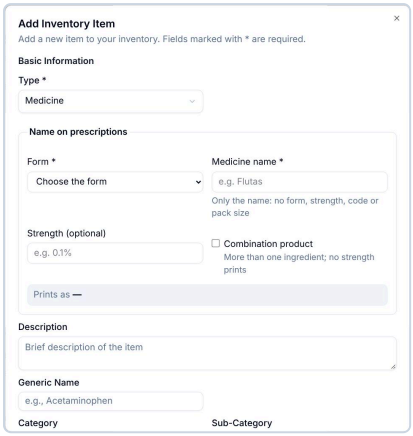

Figure 12.15. Add batch opens Add Inventory Item. Fields marked * are required.

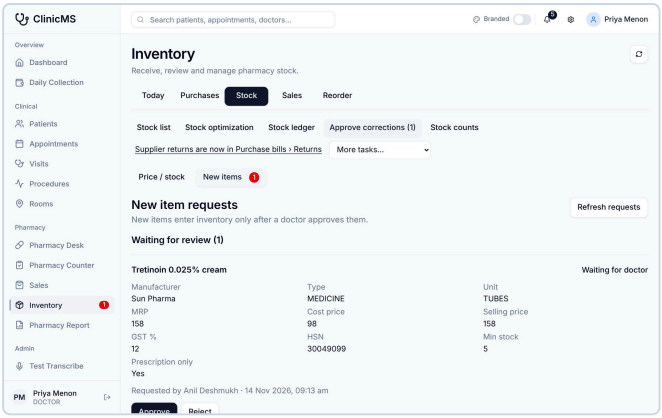

Figure 12.16. The New items tab: a pharmacist's request to add Tretinoin cream.

PART OF THE FORM	WHAT TO FILL IN
Basic Information	Item Name, Type (Medicine, Consumable, Equipment or Supply), the medicine's form and strength, generic and brand name, manufacturer, category.
Pricing	Cost Price, Selling Price, MRP and GST rate. Cost and selling price are required.
Unit & Packaging	The stock unit (pieces, tubes, strips, bottles and so on), pack size and pack unit.
Stock Levels	Min Stock, Max Stock, Reorder Level and Reorder Qty.
Identification	Batch number, expiry date, HSN code, barcode, SKU and item code.
Additional Details	Storage location and conditions, supplier, and whether it needs a prescription or is a controlled drug.

12.14 Read a medicine's history

WHO USES THIS Pharmacists, doctors, admins

The tabs on a medicine's page show everything that happened to it, across all its batches. The chosen tab is kept in the page address, so you can share it or come back to it.

The **Ledger** tab is the full record of stock in and out. At the top a label says whether the ledger agrees with the stock on hand: *Ledger matches stock on hand* (green), *Matches only after unrecorded changes* or *Ledger does not match* (amber). An amber box lists any batch where the two disagree. Rows where stock changed without a record are tinted amber with a note. Use **From**, **To** and **Type** (Sale, Purchase, Return, Adjustment) to filter, and **Download CSV** to save the rows you see.

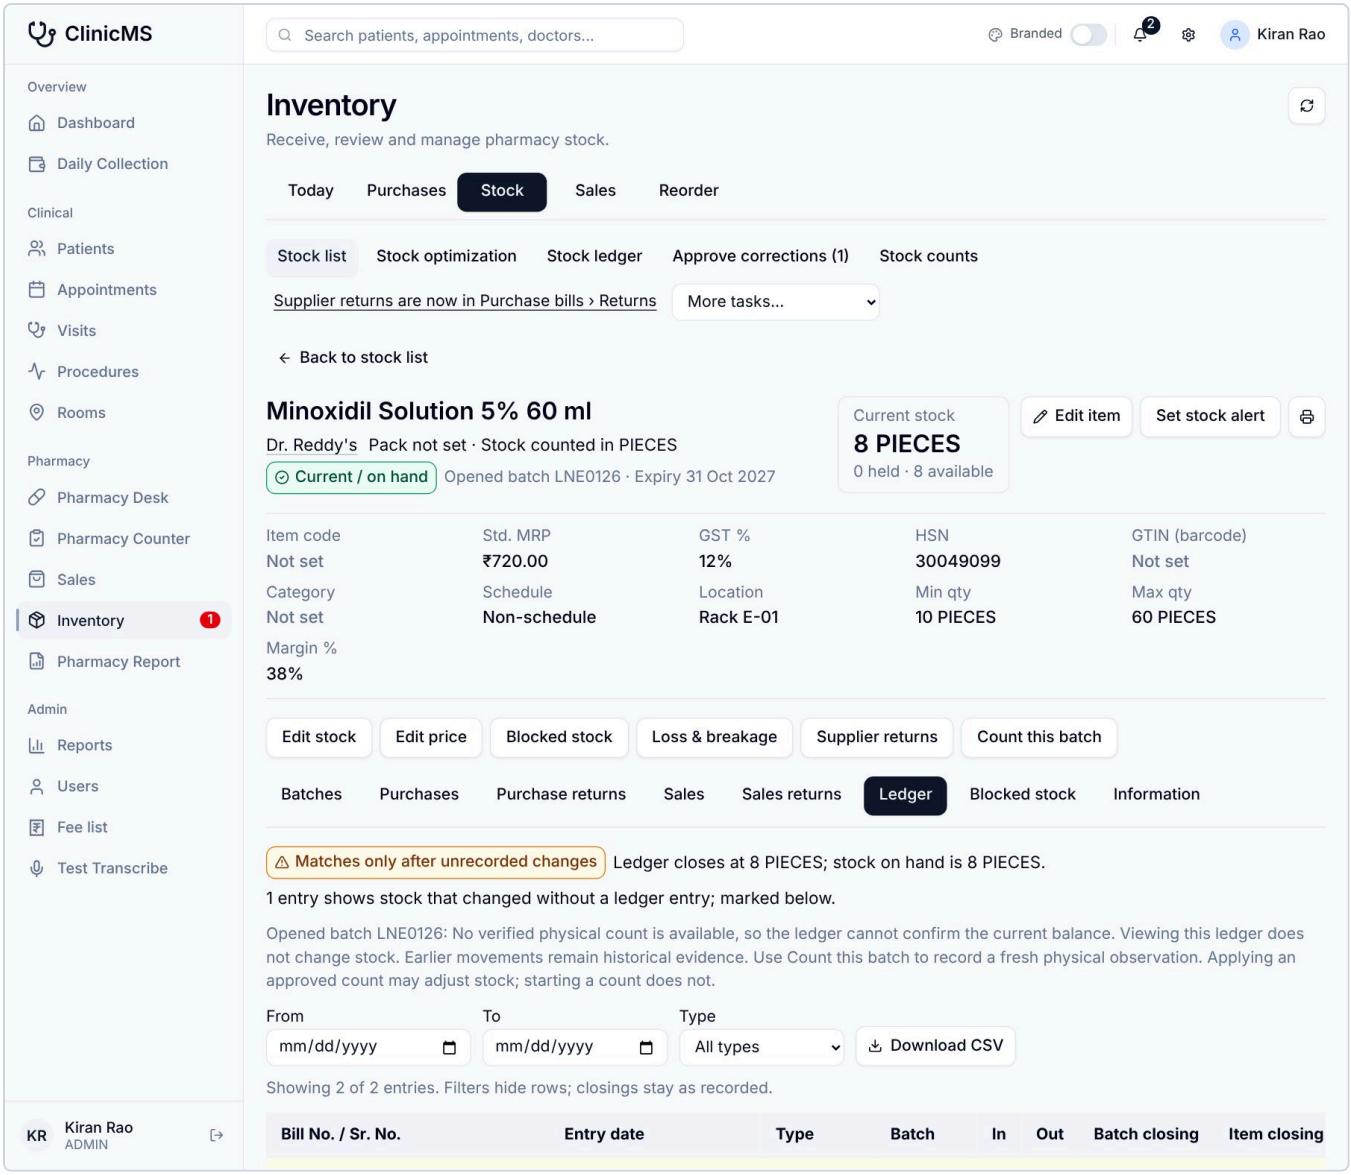

Figure 12.17. The Ledger tab for Minoxidil after the approved stock change.

TAB	WHAT IT SHOWS
Batches	Every batch with quantity and prices. See *Check the batches of a medicine*.
Purchases	The supplier bills that brought this medicine in, with bill number, supplier, date, amount and status. Click one to open the bill.
Purchase returns	Returns of this medicine to a supplier.
Sales	Every sale of this medicine, taken from the ledger.
Sales returns	Medicine returned by customers.
Ledger	Every movement: bill or document number, date and time, type, batch, in, out, batch and item balance after the movement, customer or distributor, and who did it.
Blocked stock	Holds placed on this medicine, how many units are still held, and why.

Information	Category, manufacturer, HSN, GST, barcode, SKU and a list of missing details.

Doctors and admins also see an **Action** on each ledger row. **Correct** lets them post a linked correction: type the correct signed quantity and a reason, then click **Post linked correction**. The original movement stays in the record and the correction is a separate document (see *Corrections*). When the movement belongs to a purchase bill, a sale or another document, the button opens that document instead, because the fix belongs there.

12.15 Find slow-moving stock to return or use up

WHO USES THIS Pharmacists, admins

Stock › Stock optimization looks for stock that has not sold for a long time. Stock bought from a distributor in the last year can usually go back to them, so the app groups it by distributor and can start a return draft. Older stock stays in the second list with its remaining shelf life, so you can discount it or use it in the clinic first.

Two rules decide what counts as slow. **Non-moving days** flags stock not sold for that many days. **Minimum batch value (₹)** leaves out batches worth so little that returning them costs more than it recovers. Change them and click **Save rules**.

1. Click **Run optimization**. The app checks every batch on the shelf against its sales and purchase bills.
2. Read the **returnable** groups. Each distributor shows its batches, how long since each last sold, shelf life left and value.
3. To send stock back, use the group's button to create a return draft. It opens in Purchases › Returns, where you finish and post it (see the chapter Inventory: purchases).
4. Batches already on an open return show that return's reference instead.

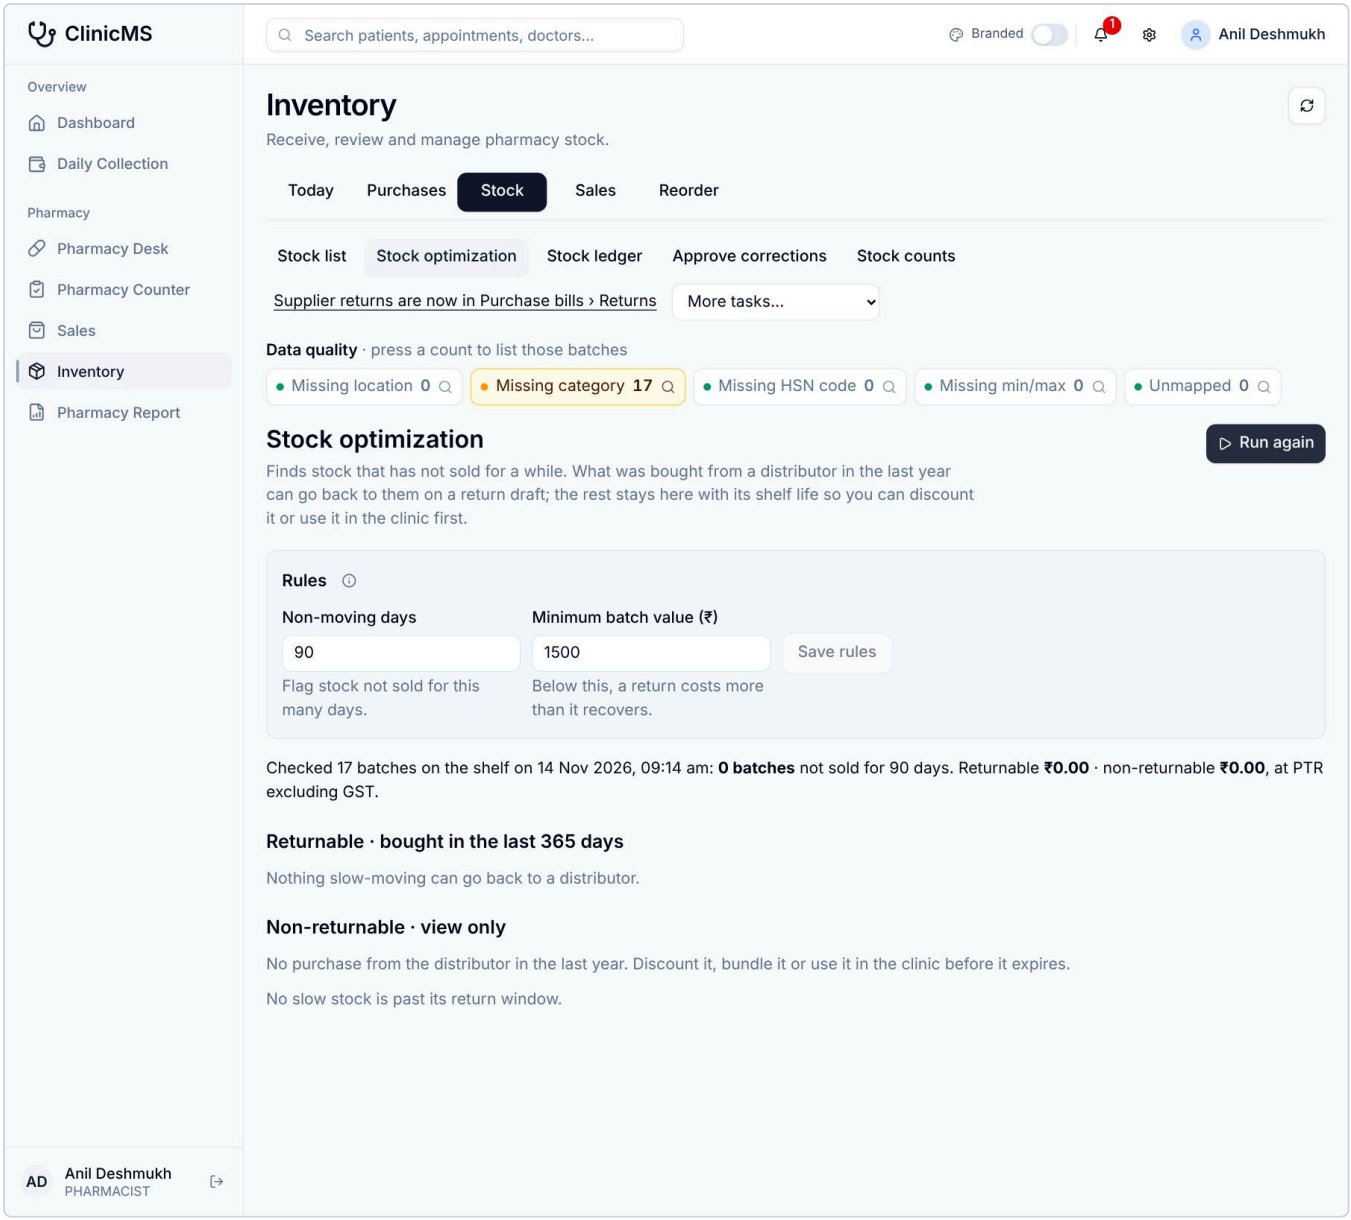

Figure 12.18. Stock optimization after a run.

> **TIP**
> If the run finds nothing, no batch passed both rules. Lower Non-moving days to look further.

12.16 Set up the stock count cycle

WHO USES THIS Admins, owners, doctors

Stock counts check the shelves against the system a few items at a time, so that every batch is counted once in each cycle without closing the pharmacy. The app gives each counter a short list every day.

Open **Stock › Stock counts** and the **Settings** tab.

1. Turn on **Stock reconciliation is off**. The label changes to *on*.
2. Set **Cycle length (days)**: every batch in stock is counted once in this many days.

3. Set **Items per person per day**.
4. Tick the **People who count**.
5. Read the summary. It says whether the people and numbers you chose cover all batches in the cycle, and warns that saving starts a new cycle today.
6. Click **Save settings**. **Undo changes** puts back the saved settings. The **Current cycle** box then shows the cycle dates, the day number and how many batches are counted so far.

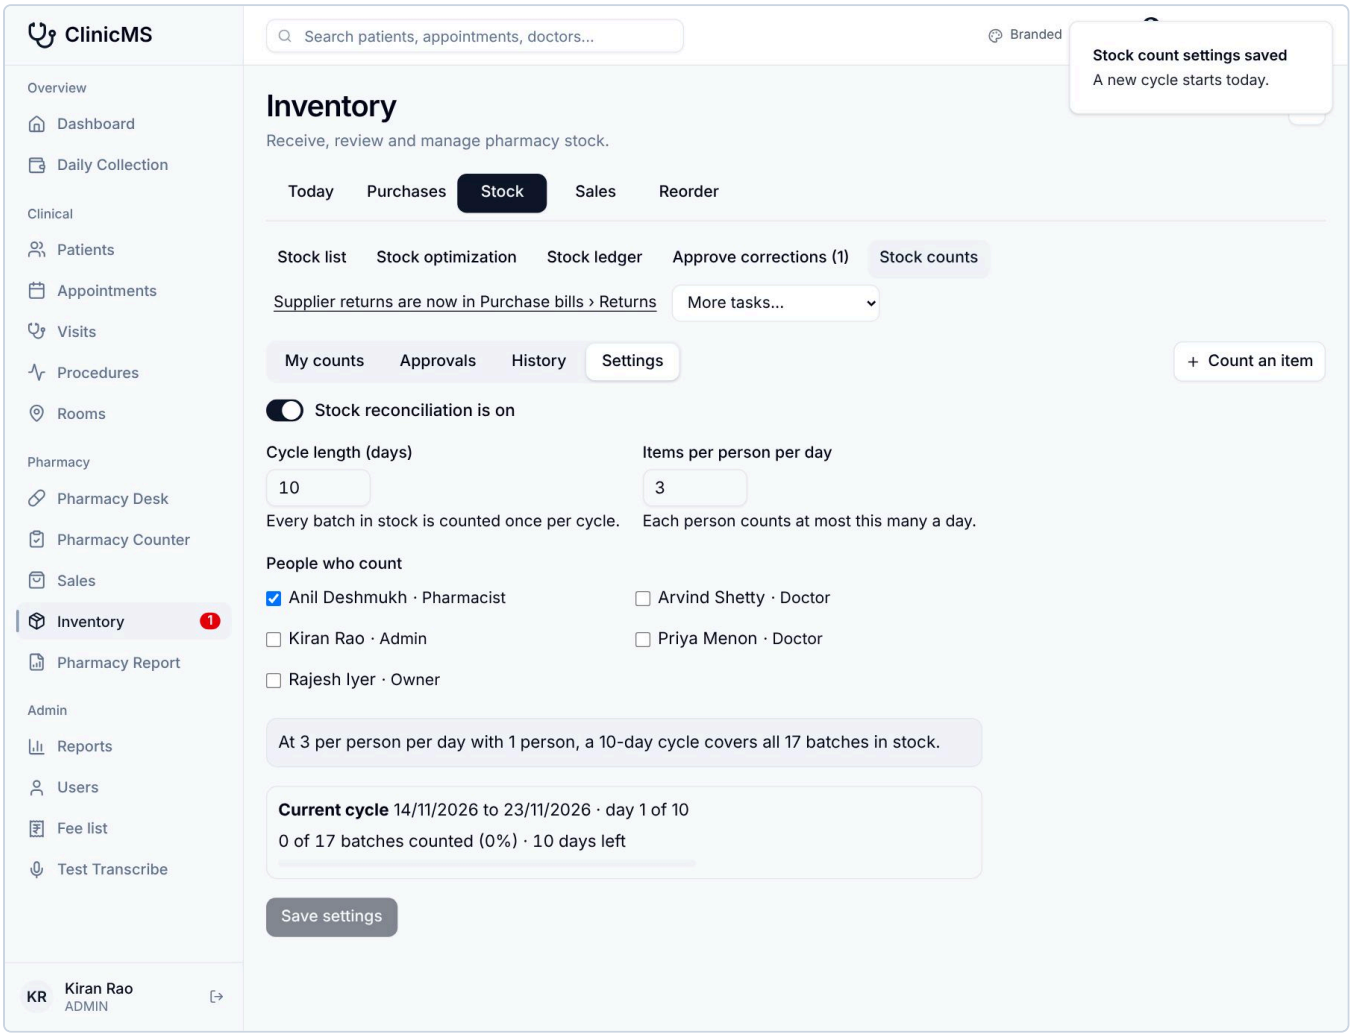

Figure 12.19. Count settings: one pharmacist counts 3 items a day over a 10-day cycle.

> **TIP**
> Turning reconciliation on, or changing the cycle length, starts a new cycle. Batches counted in the old cycle will be counted again.

12.17 Count the shelves and sign off

WHO USES THIS Pharmacists and others on the count rota

When you have items to count, Today shows **Stock count due today**. Click it, or open **Stock › Stock counts › My counts**. Each count shows when it is due and how many items are left.

1. Click **Start counting** (or **Continue counting**).

2. Go to each location shown and count what is on the shelf. Type the number in **Counted**. Enter 0 when a batch is not there. The **Difference** column fills in by itself. Your numbers save as you type.
3. Click **+ Note** to explain a difference on that line.
4. When every line is counted, click **Sign off count**.
5. If anything differs, the window lists the batches that differ. Type why in **Why do these differ? (required)** and click **Sign off and send for approval**. If everything matched, click **Sign off**: stock is confirmed without a change.

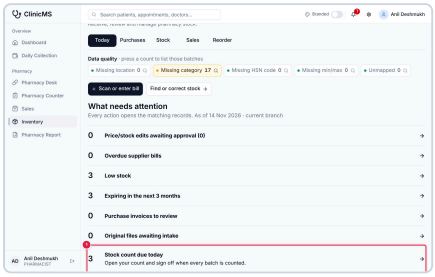

Figure 12.20. Today shows the count due.

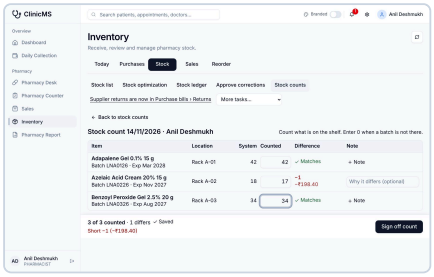

Figure 12.21. The counting sheet. One tube of Azelaic Acid Cream is short.

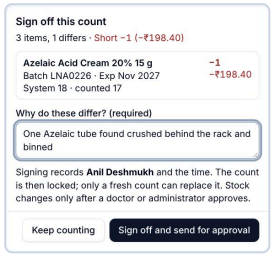

Figure 12.22. Signing off: the difference needs a reason.

12.18 Approve or reject a stock count

WHO USES THIS Doctors, admins, owners

A signed count that differs from the system waits for approval. Today shows **Counts awaiting your approval** with the value short and extra. Open **Stock › Stock counts › Approvals** and click a count. The record lists the differing batches first, and its header shows the items, how many differ, and the value short and extra.

Approve and adjust stock opens a window listing each stock change and the total change in stock value. The reason is filled in with who signed the count and when. Each difference is applied to today's stock, so sales made since the count are kept. **Reject** asks why, so the next count can fix it; those batches will be counted again.

Nobody approves their own count. If you signed it, the record names who can decide it. Only when no other approver is active in the branch can you decide it yourself, after ticking a box that is recorded.

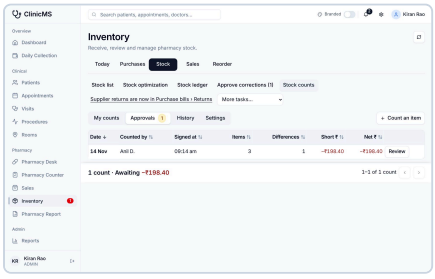

Figure 12.23. Counts waiting for approval.

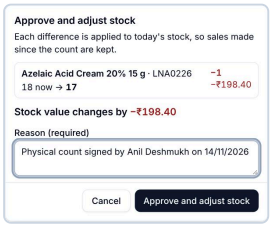

Figure 12.24. Approve and adjust stock: the change to each batch and to stock value.

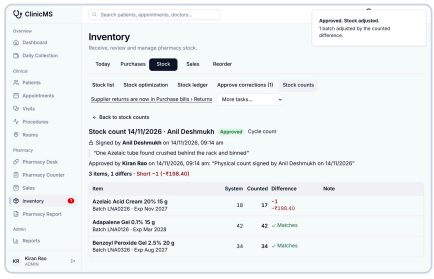

Figure 12.25. The approved count record.

12.19 Count an item or a shelf on demand

WHO USES THIS Pharmacists, admins

When something looks wrong outside the cycle, count it now. Click **Count an item** on the Stock counts page (or **Count this batch** on a medicine's page). You count and sign it off; any difference goes for approval as usual.

1. Click **Count an item**.
2. Type a medicine name, batch or rack in **Find a batch**, or choose a whole shelf.
3. Tick the batches to count.
4. Click **Count N batch**. The counting sheet opens.

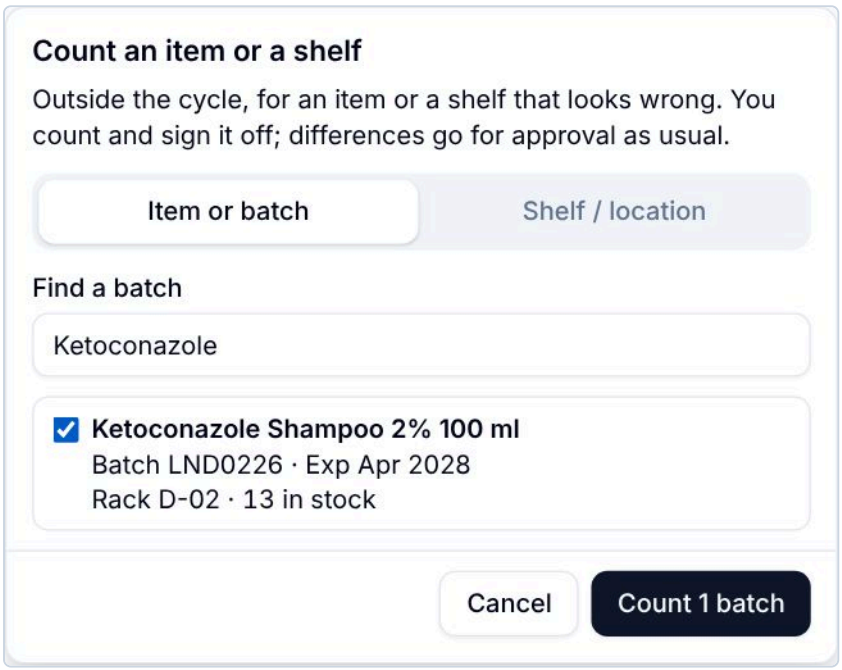

Figure 12.26. Count an item or a shelf.

12.20 Look up past counts

WHO USES THIS Pharmacists, admins

The **History** tab lists every count: who counted, when, how many items, how many differed, and whether it was confirmed, approved or rejected. Search by item, batch or person, and filter by **Person** and **Status**. Click a count to open its record.

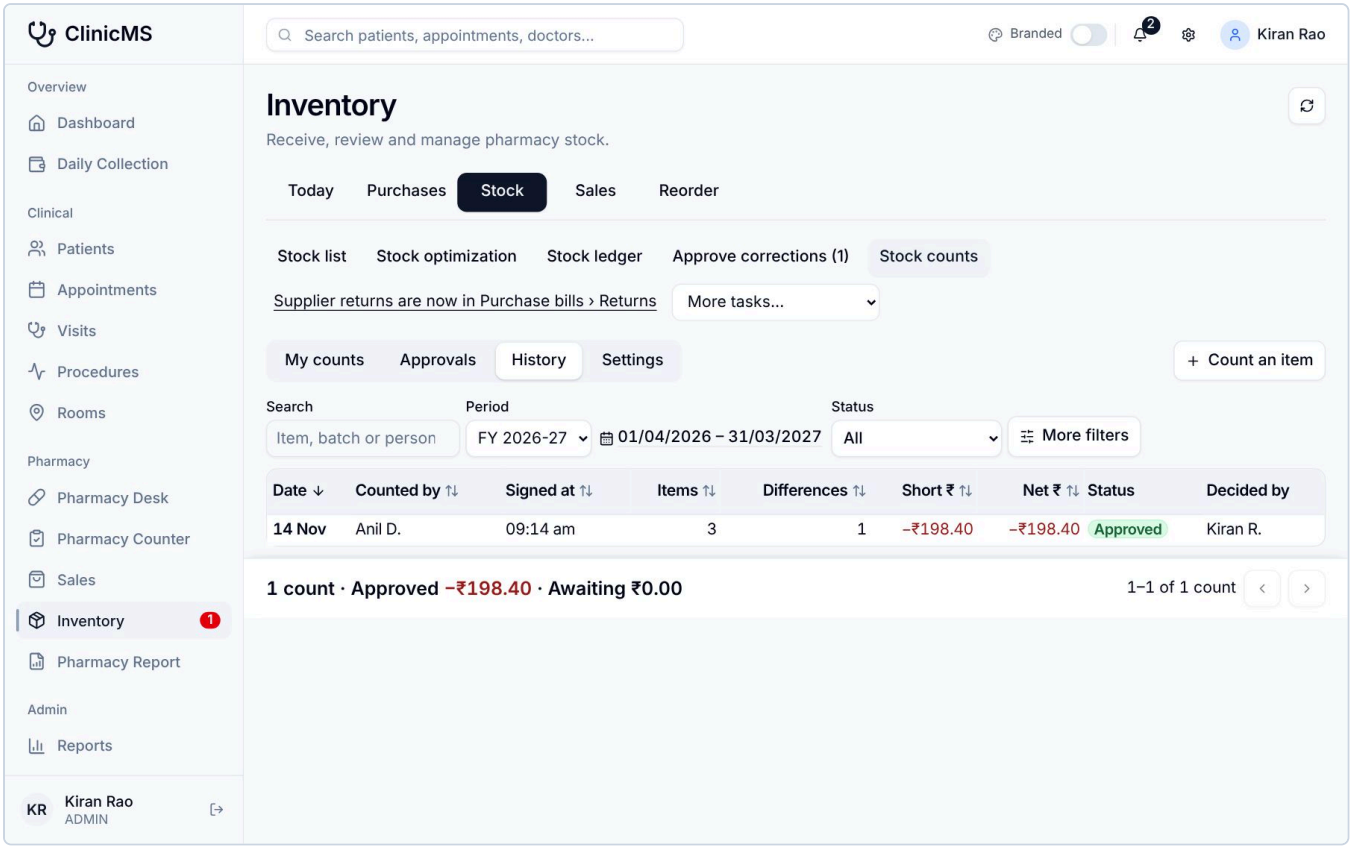

Figure 12.27. Stock count history.

12.21 Record loss or breakage

WHO USES THIS Pharmacists

Use a loss when stock is damaged, broken, expired and thrown away, or lost. It removes the units from stock with a reason. Find it under **More tasks… › Loss & breakage**, which lists past losses, or start one from the medicine's page with **Loss & breakage**.

1. Open the medicine and click **Loss & breakage**. A draft opens with that batch already added. To start from the list, click **New document** and add batches with **Add a batch**.
2. Check **Date** and **Stock source**: **Available stock (no hold)**, or held stock if the units were set aside first.
3. Type the reason in **Reason / notes**.
4. Enter the **Quantity** lost on each line.
5. Click **Post stock loss**. To finish later, click **Save draft**; a draft does not change stock.

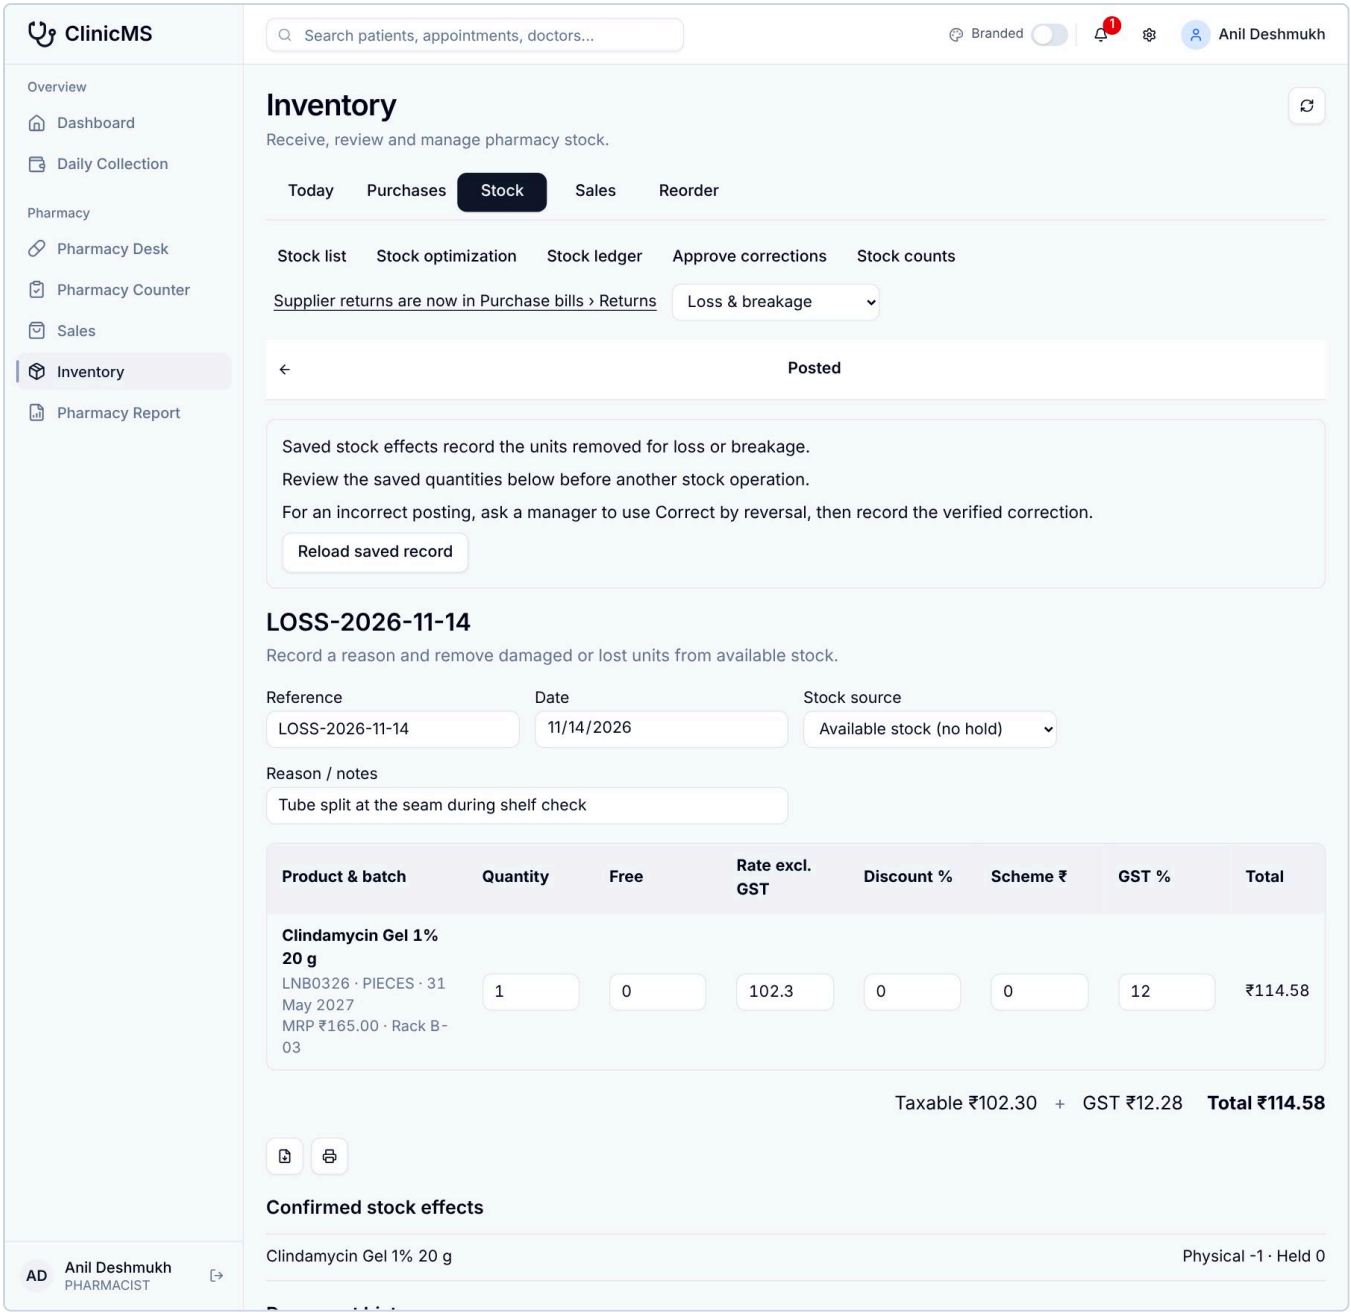

Figure 12.28. A posted loss. The confirmed stock effect shows one tube removed.

DOCUMENT STATUS	MEANING
Draft • no stock change	Saved but not posted. Stock is unchanged.
Awaiting manager approval	Sent for a manager's approval. A doctor or admin sees **Approve document** and **Reject proposal**.
Approved • ready for next step	Approved, waiting to be posted or received.
Posted	Stock has changed.
Released	A hold whose units are back in available stock.
Reversed	Undone by a correcting entry. The original stays in history.

Cancelled / Rejected	Stopped before it changed stock.

Every inventory document (losses, holds, corrections, opening stock, returns, orders, sales) shows a box at the top explaining its status and what to do next, the lines, the **Confirmed stock effects** once posted, and a **Document history** with each change and who made it. **View recorded changes** shows what changed at each step. **Cancel document** stops a draft. The list for each kind of document has filters for **Status**, **Reference**, **From date** and **To date**, with **Previous** and **Next** for more pages.

> **TAKE CARE**
> Posting removes the units from stock. A wrong loss can only be undone by a doctor or admin with **Correct by reversal** on the document.

12.22 Block stock from sale

WHO USES THIS Pharmacists

A hold keeps units in physical stock but stops them being sold, for example while you wait for a recall notice or a supplier's decision on a damaged carton. Start it from the medicine's page with **Blocked stock**, or from **More tasks… › Blocked stock** with **New document**.

1. Enter the reason and the quantity to hold on each line.
2. Click **Block stock**. The units are now shown as held, and the batch's available stock drops.
3. When the matter is settled, open the hold and click **Release held stock** to make the units available again. To remove them instead, record a loss or supplier return from held stock.

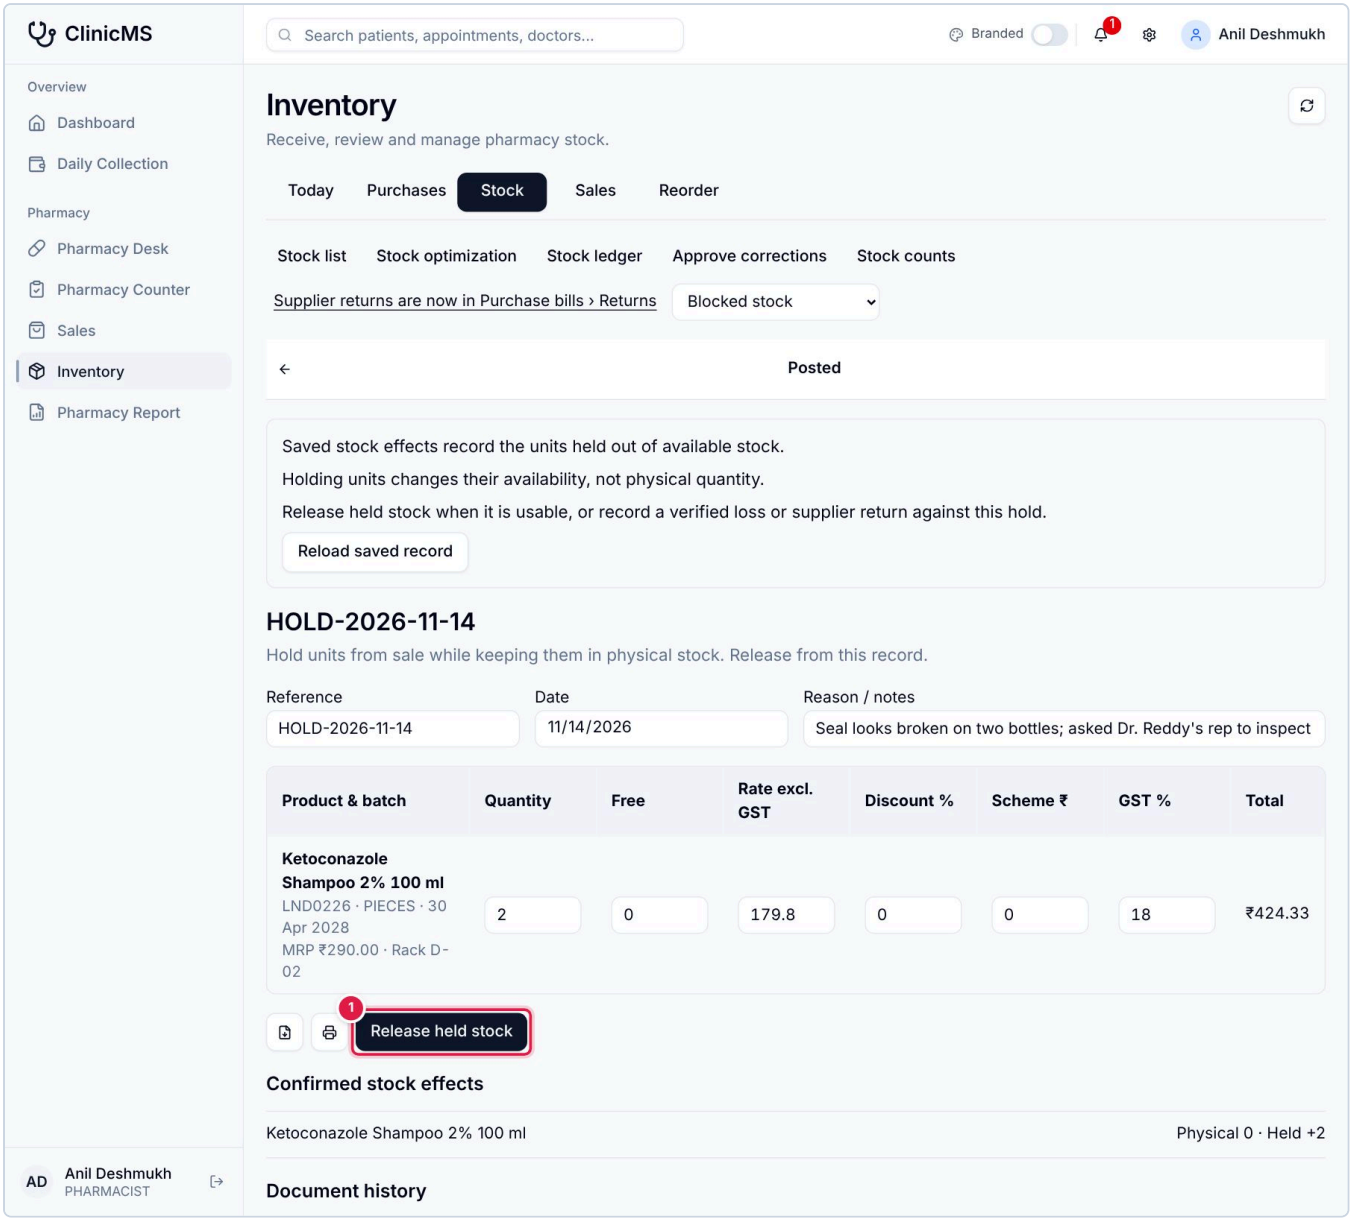

Figure 12.29. Two bottles of Ketoconazole Shampoo held. Release held stock puts them back.

12.23 Corrections

WHO USES THIS Doctors, admins

More tasks… › Corrections lists linked corrections. A correction fixes a stock movement that was recorded with the wrong quantity, while keeping the original movement and a reason. You do not start one from this list. Start it from the **Ledger** tab of a medicine with **Correct** on the wrong row (see *Read a medicine's history*). A posted inventory document is corrected with **Correct by reversal** on the document itself.

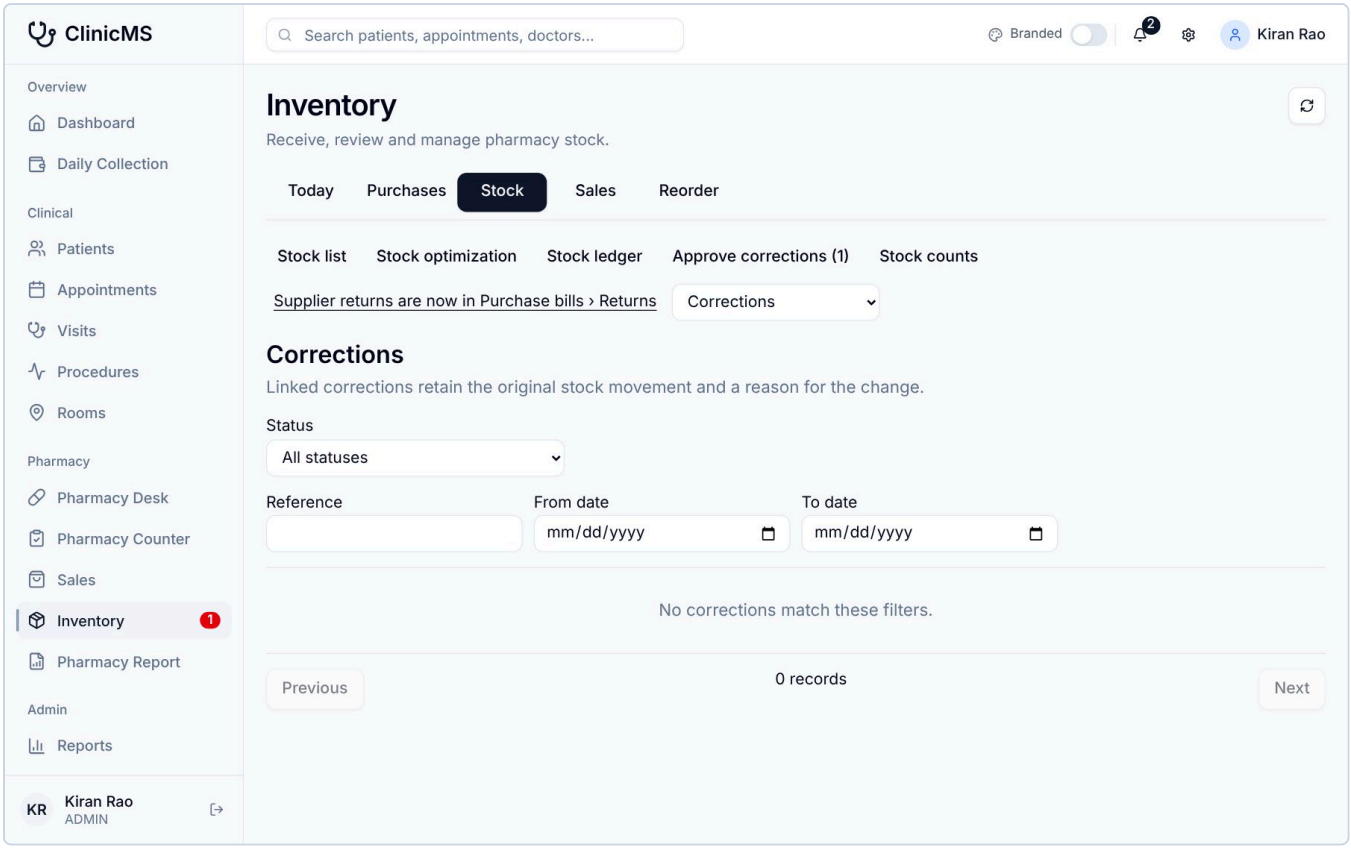

Figure 12.30. The Corrections list.

12.24 Enter opening stock

WHO USES THIS Pharmacists, admins

Opening stock is the stock already on the shelf when the clinic starts using the app, or a batch found with no purchase record. It sets the starting balance of a batch with no earlier movements. It creates no amount owed to a supplier.

For a few batches use **More tasks… › Manual opening stock**, click **New document**, add each batch with its quantity and rate, and click **Post opening stock**.

For a whole pharmacy use **More tasks… › Opening stock import**. Click **Choose Excel** or drop an .xlsx or .xls file (up to 5 MB and 1,000 rows) on the box, then click **Preview import** and check the rows before importing. **Excel columns and format** lists the columns the file needs.

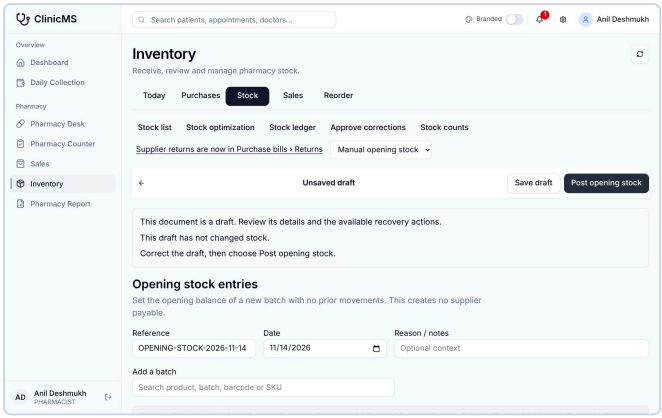

Figure 12.31. A new manual opening stock entry.

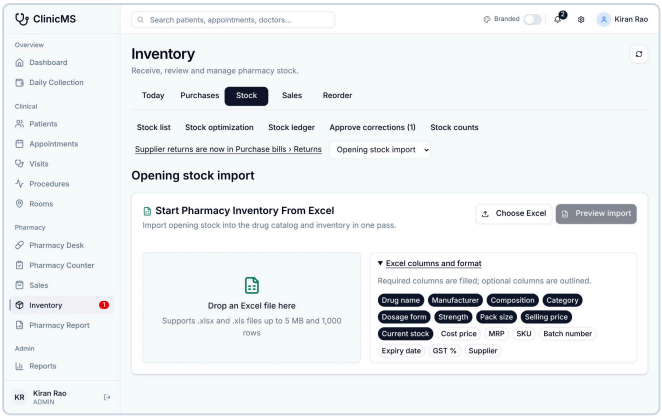

Figure 12.32. Opening stock import from Excel.

12.25 See every stock movement in the stock ledger

WHO USES THIS Pharmacists, admins

Stock › Stock ledger lists every change to stock across all medicines: purchases, sales, returns, losses, holds, counts and approved edits. Use it to answer questions such as *what left the shelf yesterday?*

Set **From** and **To**, or click **Today**, **7 days**, **30 days** or **90 days**. Type in **Search** to find a medicine or document. **Method** narrows to one kind of movement, such as Purchase invoice, Pharmacy bill, Supplier return, Loss or breakage, Stock count or Approved stock edit. **All**, **Stock in** and **Stock out** choose the direction. **Export CSV** saves the rows. Click a medicine or document in a row to open it.

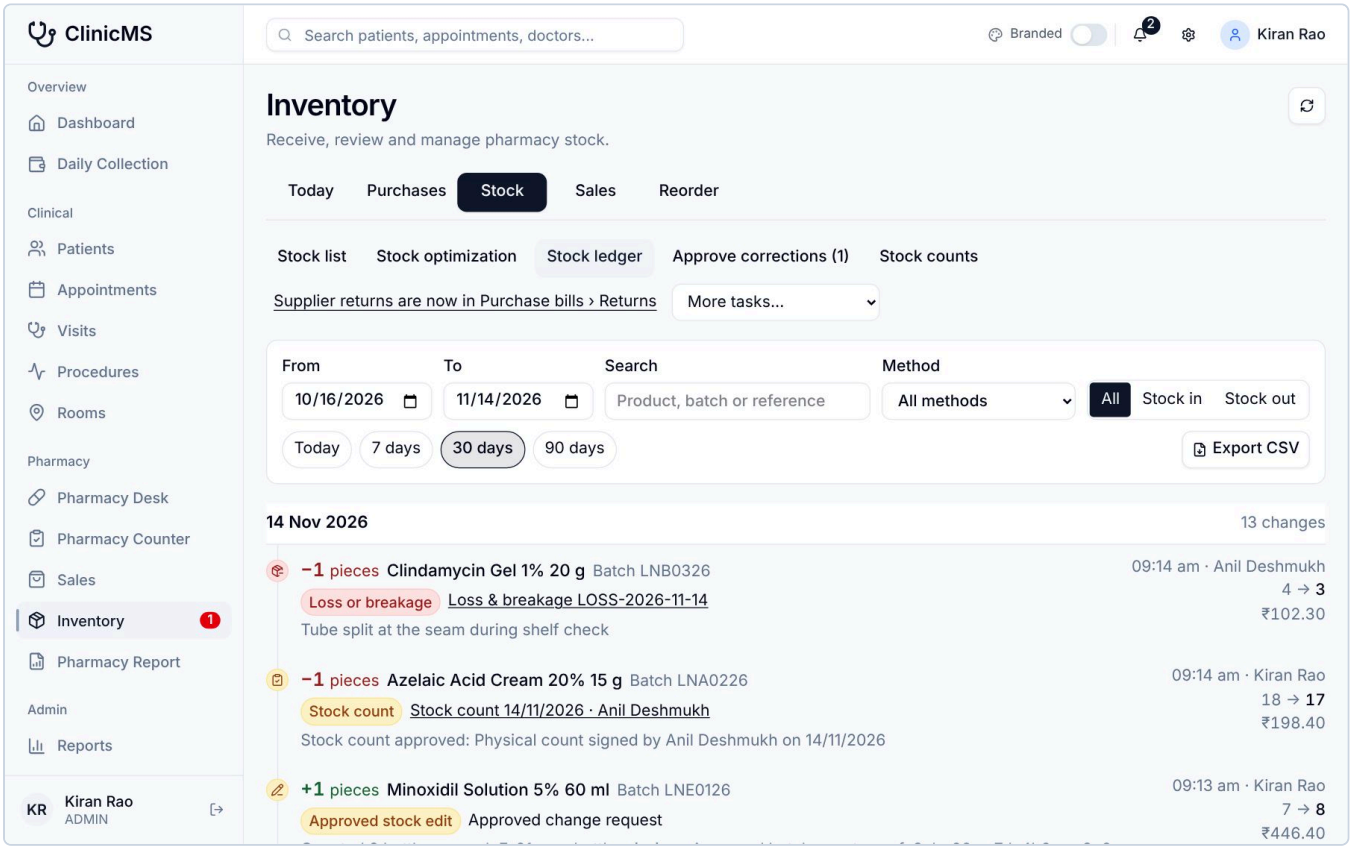

Figure 12.33. The stock ledger for the last 30 days.

CHAPTER 13

Inventory: purchases

The **Purchases** area of Inventory is where the pharmacy records what it buys. You enter each distributor's bill, add the stock it brings, pay the distributor, send damaged or near-expiry goods back, and keep the distributors' details and agreed terms. Pharmacists do the daily entry. Payments, credit notes and terms need extra permissions, which admins and owners have. The row of tasks under the area buttons shows **Purchase bills**, **Scan or enter bill** and **Import CSV**. A **More tasks…** list holds Gmail intake, Suppliers, Terms of Trade, Payments & dues, Credits & vouchers, Inward challans, Gate passes and Purchase costs.

13.1 Find your way around Purchases

WHO USES THIS Pharmacists, admins, owners

Click **Purchases** under the page title. It opens on **Purchase bills**, the list of every supplier bill the pharmacy has entered. The row of tasks under the area buttons shows the three most used tasks. The rest are in the **More tasks…** list at the end of the row. Each task below has its own section in this chapter.

What you see depends on the permissions your administrator gave you. Someone without the purchase ledger permission does not see Payments & dues or Credits & vouchers, and cannot record payments or credit notes. A person without permission to add suppliers sees the supplier list but not the Add supplier button.

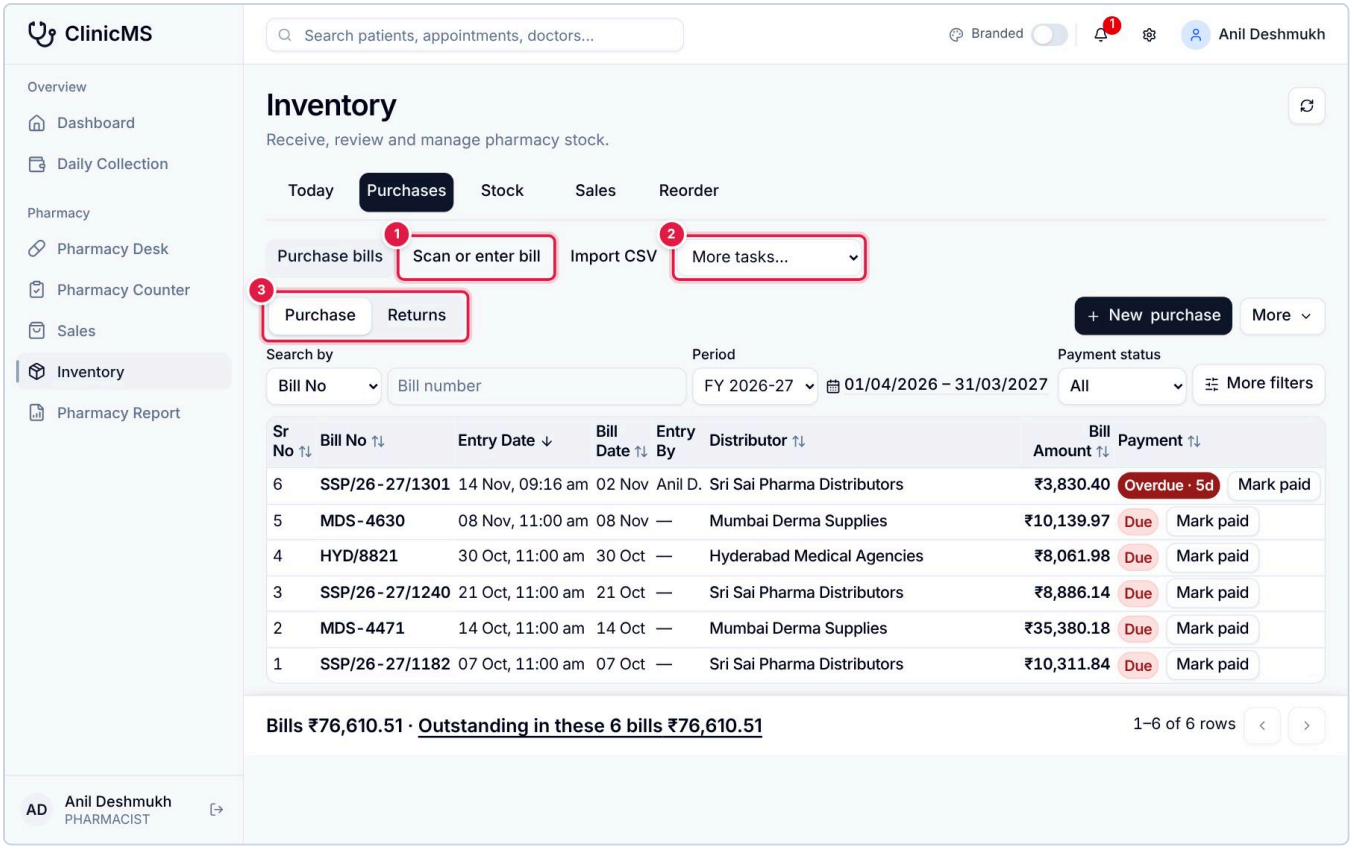

Figure 13.1. The Purchases area opens on Purchase bills. (1) the three main tasks, (2) the More tasks list, (3) the Purchase and Returns tabs.

TASK	WHAT IT IS FOR
Purchase bills	The register of supplier bills and, on its second tab, the returns sent back to suppliers.
Scan or enter bill	Upload a photo or PDF of a bill, or type it in, then add its stock.
Import CSV	Load a bill from a spreadsheet file the distributor sent.
Gmail intake	Pick up bills that arrive as email attachments. Needs an administrator to connect Gmail.
Suppliers	The saved list of distributors and their details.
Terms of Trade	The price and discount each distributor agreed for each product.
Payments & dues	What you owe each distributor, how old it is, and where you record a payment.
Credits & vouchers	Credit notes from distributors, for goods you returned.
Inward challans	A record of goods that arrived before their bill.
Gate passes	A record of a delivery's reference and linked order, with no stock effect.
Purchase costs	Reviewed purchases ranked by distributor and by product cost.

13.2 Look up a supplier bill in the register

WHO USES THIS Pharmacists, admins, owners

Use **Purchase bills** to find a bill, see whether it has been paid and open it. The list shows one row per bill, newest first, for the current financial year (April to March). The line at the bottom adds up the bills in view and the amount still owed on them.

Click a bill number to open the bill. Click a column heading to sort by it; click again to reverse the order. Click the underlined **Outstanding in these bills** total to jump to Payments & dues (with the purchase ledger permission).

1. Click **Purchases**. The bill list opens.
2. Choose what to search by in **Search by**, such as Bill No, then type in the box next to it.
3. Choose a **Period**, or click the dates to pick your own range.
4. Choose a **Payment status** to see only bills that are due, overdue and so on.
5. Click **More filters** for distributor, bill status, source and who entered the bill. A number on the button counts the filters you set there.
6. Click **Clear filters** to start again.
7. Click a bill number to open the bill.

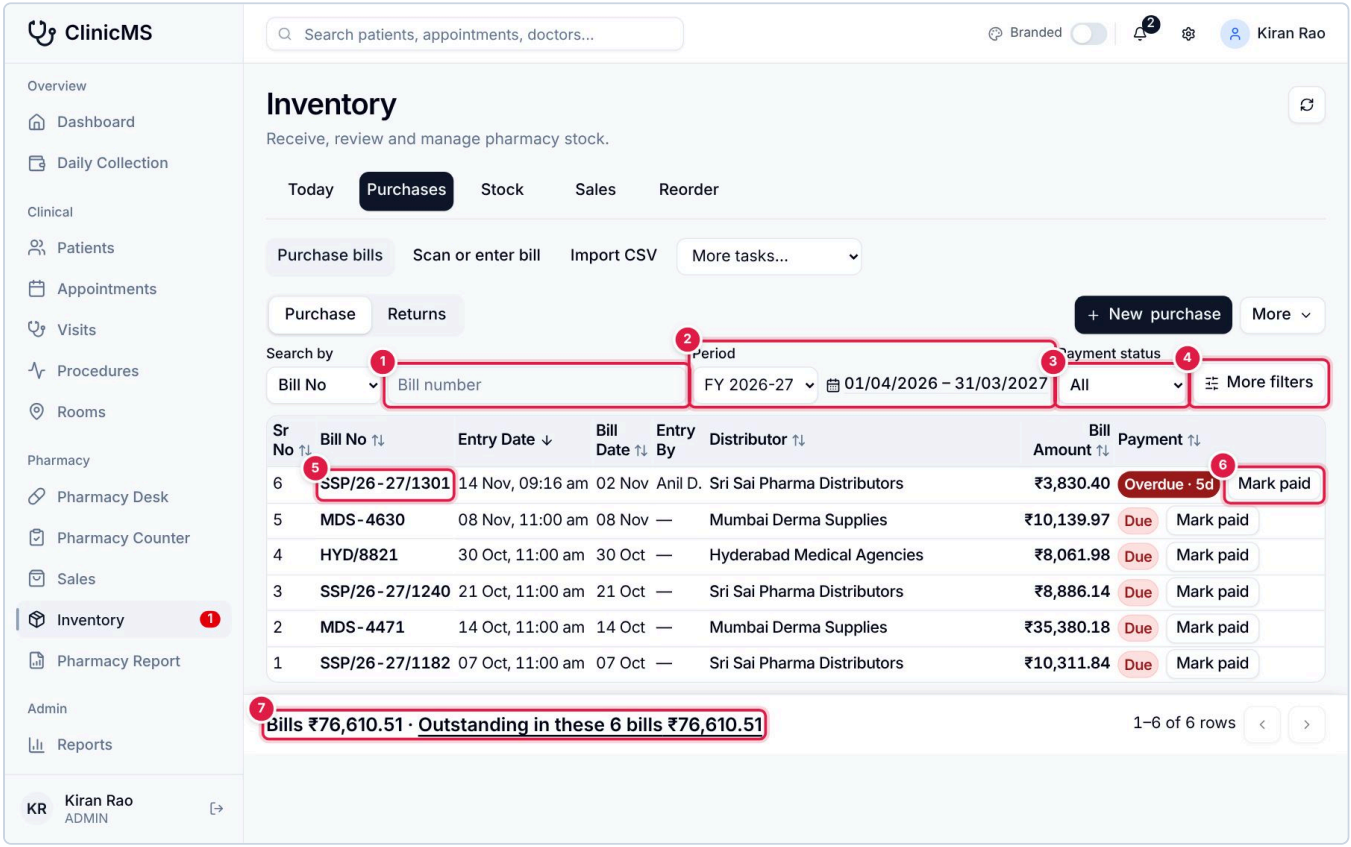

Figure 13.2. The purchase bill register. (1) search, (2) period, (3) payment status, (4) more filters, (5) a bill number, (6) Mark paid, (7) totals for the bills in view.

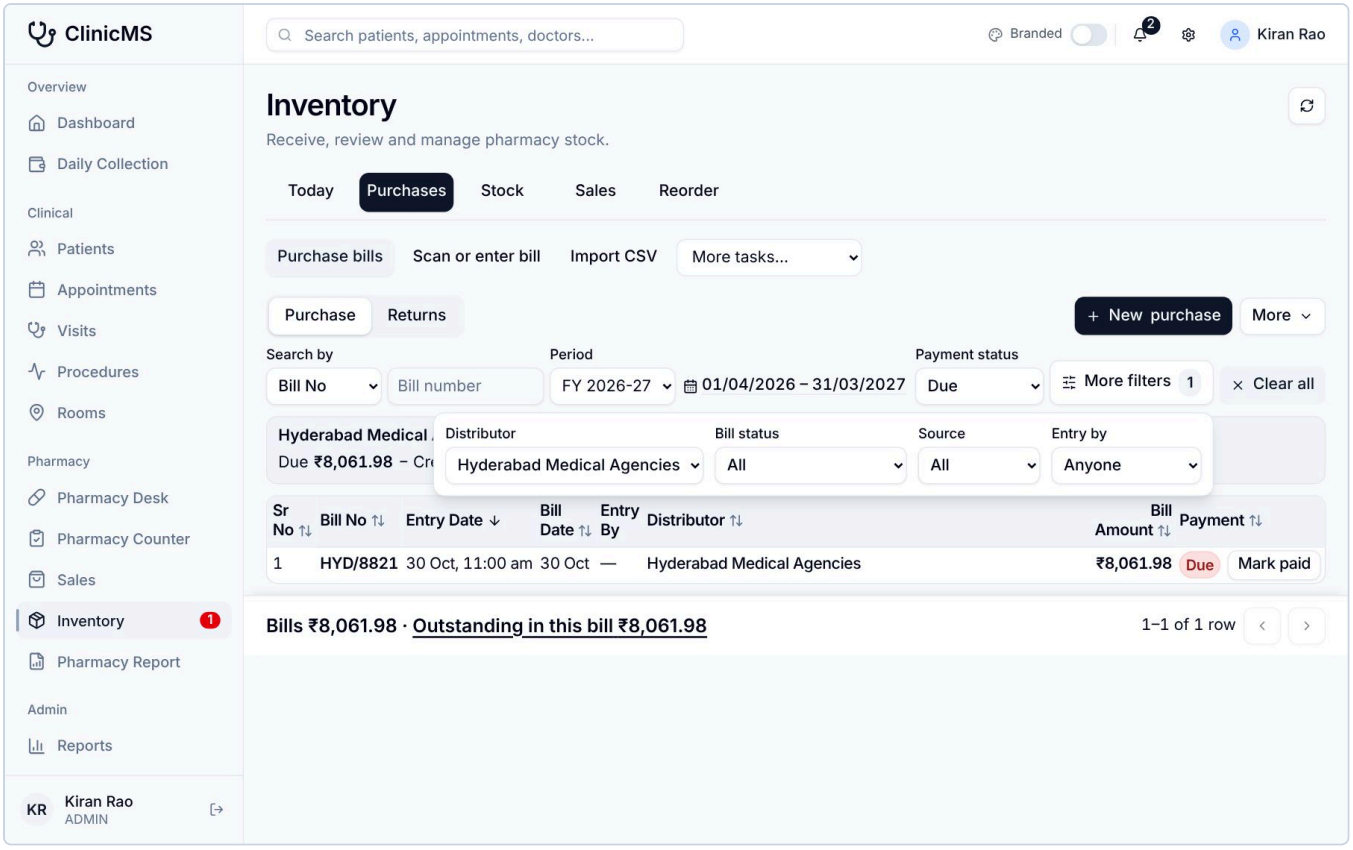

Figure 13.3. More filters open, with Payment status set to Due. The button shows how many extra filters are set, and Clear filters removes them all.

COLUMN	MEANING
Sr No	The bill's running number in the register.
Bill No	The distributor's invoice number. Click it to open the bill.
Entry Date	When the bill was entered in ClinicMS.
Bill Date	The date printed on the distributor's bill.
Entry By	Who typed or scanned it. A dash means the person is not recorded.
Distributor	The supplier named on the bill.
Bill Amount	The total payable on the bill, GST included.
Payment	The payment status of the bill (see the table below). People with the purchase ledger permission also get a **Mark paid** button on bills that still have a balance.

Payment status and the payment column use these words.

> **TIP**
> The **More** menu above the list (next to **New purchase**) has **Export to Excel** for the bills in view, **Payments & dues** and **Suppliers**.
>
> Type part of a bill number to narrow the list. The search waits until you stop typing.

13.3 Enter a bill by scanning or uploading it

WHO USES THIS Pharmacists

When a delivery arrives with a printed bill, you can upload a photo or PDF of it instead of typing every line. ClinicMS reads the bill into a draft. You check the reading against the paper, fix anything wrong and only then add the stock. A scan never changes stock by itself.

Reading a bill needs an AI reading service to be connected by your administrator. It is not connected on the demonstration system used for this guide, so the guide stops at the upload step. When it is connected, **Scan bill** sends the pages away, and the form fills in with the distributor, bill number, date and lines it could read. Each value is marked **Correct**, **Check** or **Checked / matches** (red, amber, green) so you know what to look at. Then you follow the same checks as in manual entry, below. If the reading service is not available, click **Type instead** and enter the bill by hand.

1. Click **Scan or enter bill**.
2. Click **Choose Files** and pick the photo or PDF. You can pick up to 10 files for one bill, in page order.
3. Check the **Received on** date. It is the day the goods arrived and starts as today.
4. Click **Scan bill**. The button stays grey until a file is chosen.
5. Compare every value on the draft with the paper bill, correct anything marked red or amber, and add the stock (see the next sections).

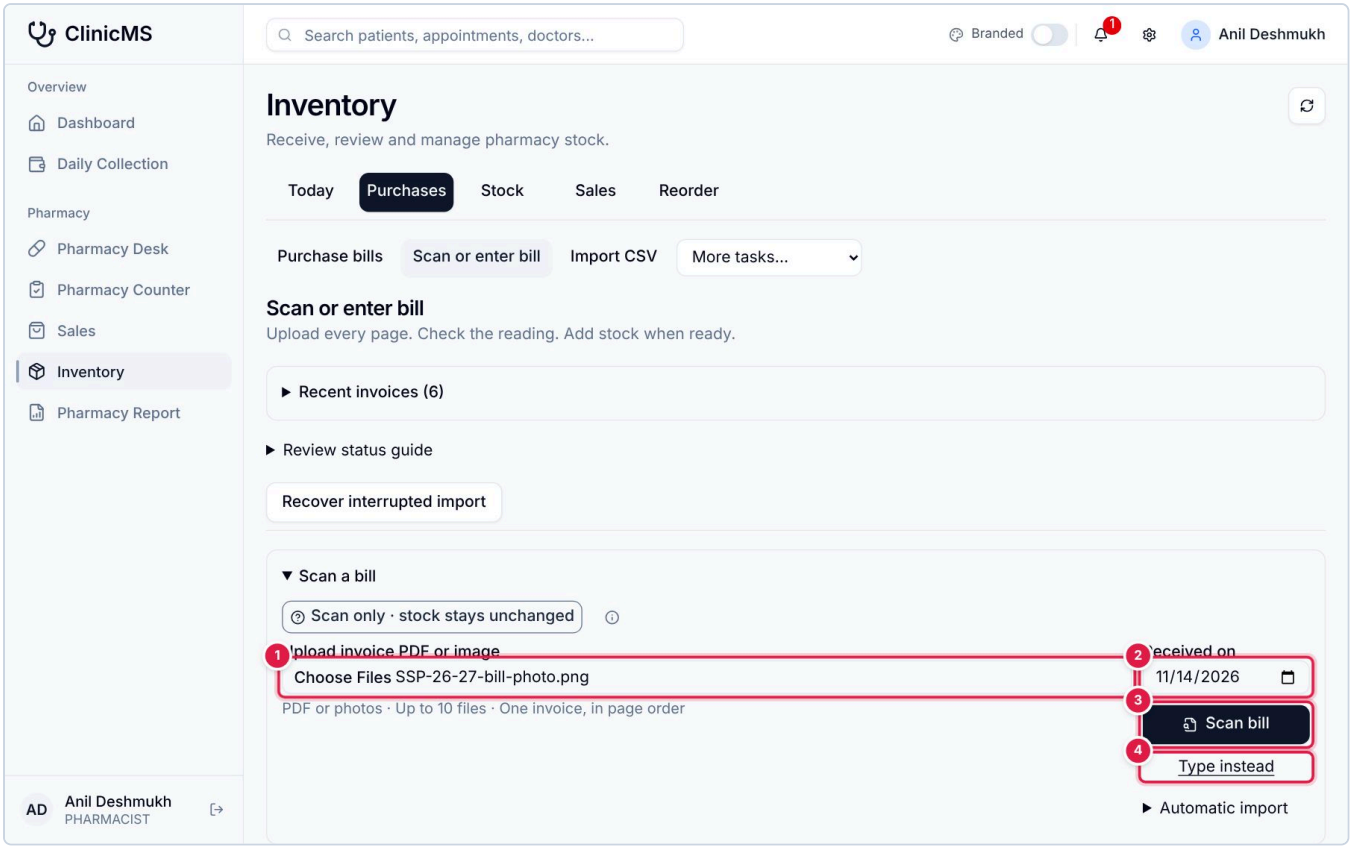

Figure 13.4. Scan or enter bill with a photo chosen. (1) choose the file, (2) the date the goods arrived, (3) Scan bill, (4) Type instead.

CONTROL	WHAT IT DOES
Recent invoices	Click to open the list of the latest bills. Click one to reopen it, for example to finish a draft.
Review status guide	Explains the red, amber and green badges.
Recover interrupted import	Use it if a scan or a stock update stopped half way (see *Drafts and recovery*).
Automatic import	An optional setting that lets very clear scans be added without the manual review. Leave it off unless your administrator tells you to use it.

TAKE CARE

A scan is only a reading of the paper. Always compare it with the bill before you add stock. A wrong quantity or batch number is much easier to fix now than after the stock is added.

13.4 Enter a bill by hand: the supplier and the bill details

WHO USES THIS Pharmacists

Type a bill in when you have no photo, or when the scan could not be read. You can also use this form to correct a scanned draft. The form has three parts: the supplier, the bill details, and the products. The example in this chapter is a delivery of Luliconazole cream from Sri Sai Pharma Distributors.

Choosing the distributor from **Saved supplier** fills in its name and GSTIN, and ClinicMS confirms it matches a saved supplier. If the distributor is not yet saved, add it under **Suppliers** first (see *Keep the distributor list*).

1. Click **Scan or enter bill**, then **Type instead**.
2. Open **Saved supplier** and choose the distributor. The green message **Matching saved supplier found** appears.
3. Type the distributor's drug licence number in **DL No.**, as printed on the bill.
4. Type the **Invoice No.** and choose the **Invoice Date**.
5. Check **Goods Received**, the day the stock arrived.
6. Choose the **Bill Type**: **Cash** or **Credit**. For a credit bill, choose the **Due Date**.

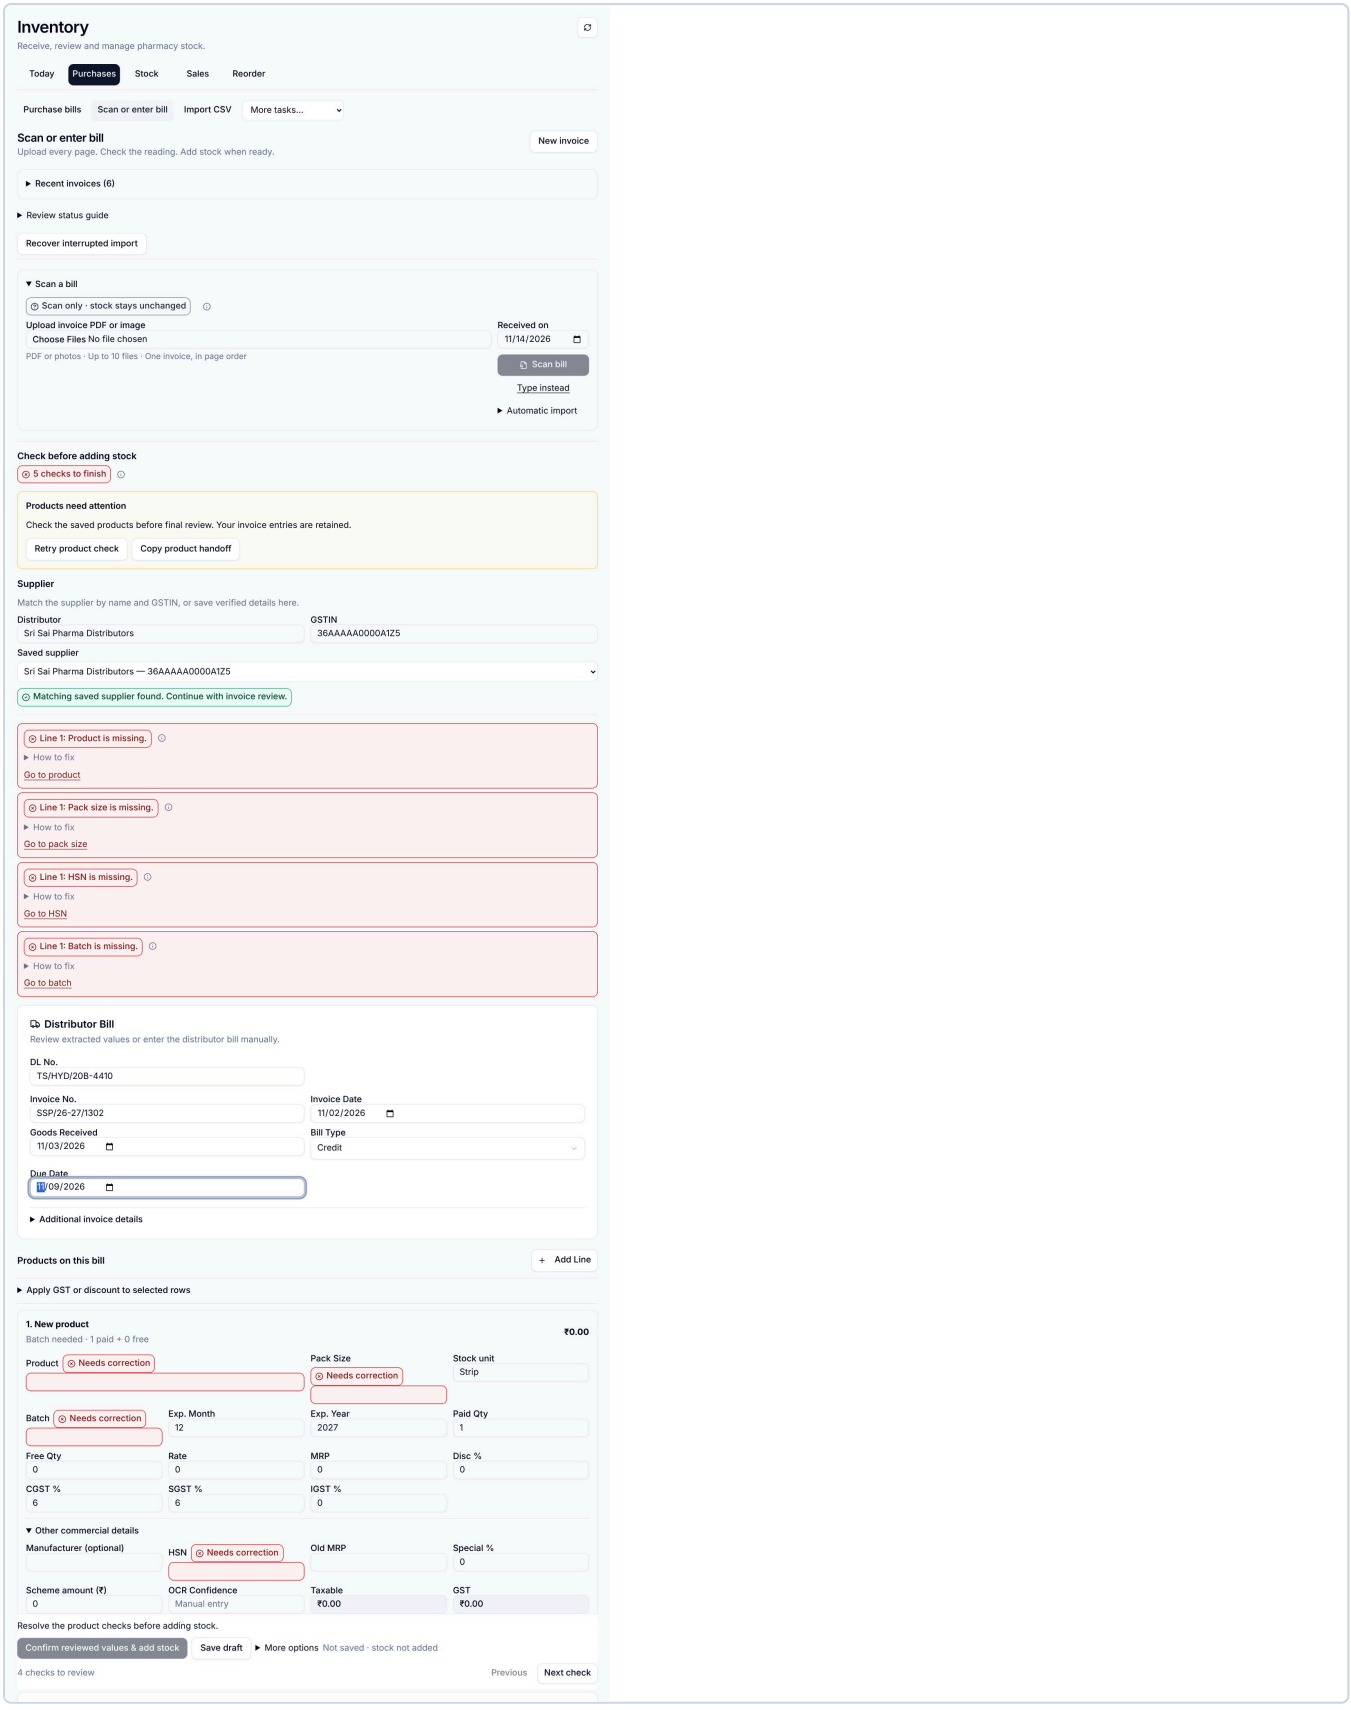

Figure 13.5. The supplier and bill details filled in for a credit bill: saved supplier, drug licence number, invoice number and date, bill type and due date. The red notes above the form are the checks still open; they clear as you fill in the products.

FIELD	WHAT TO ENTER
Distributor, GSTIN	The supplier's name and 15-character GST number. Filled in when you choose a saved supplier.
Saved supplier	The suppliers saved in ClinicMS. Always choose one so the bill is counted against the right account.
DL No.	The distributor's drug licence number printed on the bill. A bill cannot be added to stock without it.
Invoice No. / Invoice Date	The number and date printed on the distributor's bill.
Goods Received	The day the stock reached the pharmacy.
Bill Type	Cash for bills paid on delivery. Credit for bills you pay later; give a Due Date so ClinicMS can warn you when it is overdue.
Additional invoice details	Optional extras, such as the doctor name or registration number on the bill.

> **TIP**
> Use **Save draft** at the bottom at any time to keep your work and finish later.

13.5 Enter the lines and match each to a product

WHO USES THIS Pharmacists

Each product on the bill is one line. Type the line exactly as the bill shows it. ClinicMS then tries to find the same product in the pharmacy's product list, so the new stock is added under the right medicine and shows up in prescriptions, sales and reorder lists. This is the product match, shown for each line in **Product matching and details**.

The match status tells you what to do. **Not in inventory** means no saved product fits the name and pack you typed. Use **Search saved products manually**, type part of the name, and click **Match** next to the right product. If the product really is new, choose a product kind and click **Create new item**; first search, so you do not create a duplicate. **Same product · confirm** or **Possible match** means ClinicMS found a likely product: compare the invoice line with the saved product beside it and click **Confirm Match** if they are the same. **Matched** means the line is linked.

If a matched medicine is missing details ClinicMS needs, such as category, composition, dosage form, strength or whether it needs a prescription, a red box asks you to complete them from the product label. Fill them in and click **Save details and recheck invoice**.

1. In **Products on this bill**, type the name in **Product** as printed on the bill.
2. Fill **Pack Size** (the number of units in a pack as ClinicMS counts them, usually **1**), **Batch**, and the expiry in **Exp. Month** and **Exp. Year**.
3. Enter **Paid Qty** (units you pay for) and **Free Qty** (bonus units on the bill).
4. Enter the **Rate** per unit before GST, the **MRP** printed on the pack, **Disc %** and the **CGST %** and **SGST %** (or **IGST %** for another state).

5. Open **Other commercial details** and enter the **HSN** code. Check that the line total matches the bill.
6. In **Product matching and details**, look at the status of the line. If it says **Not in inventory**, search for the product and click **Match**.
7. If it says **Same product · confirm**, click **Confirm Match**.
8. If a box asks for the product's details, fill them in and click **Save details and recheck invoice**.

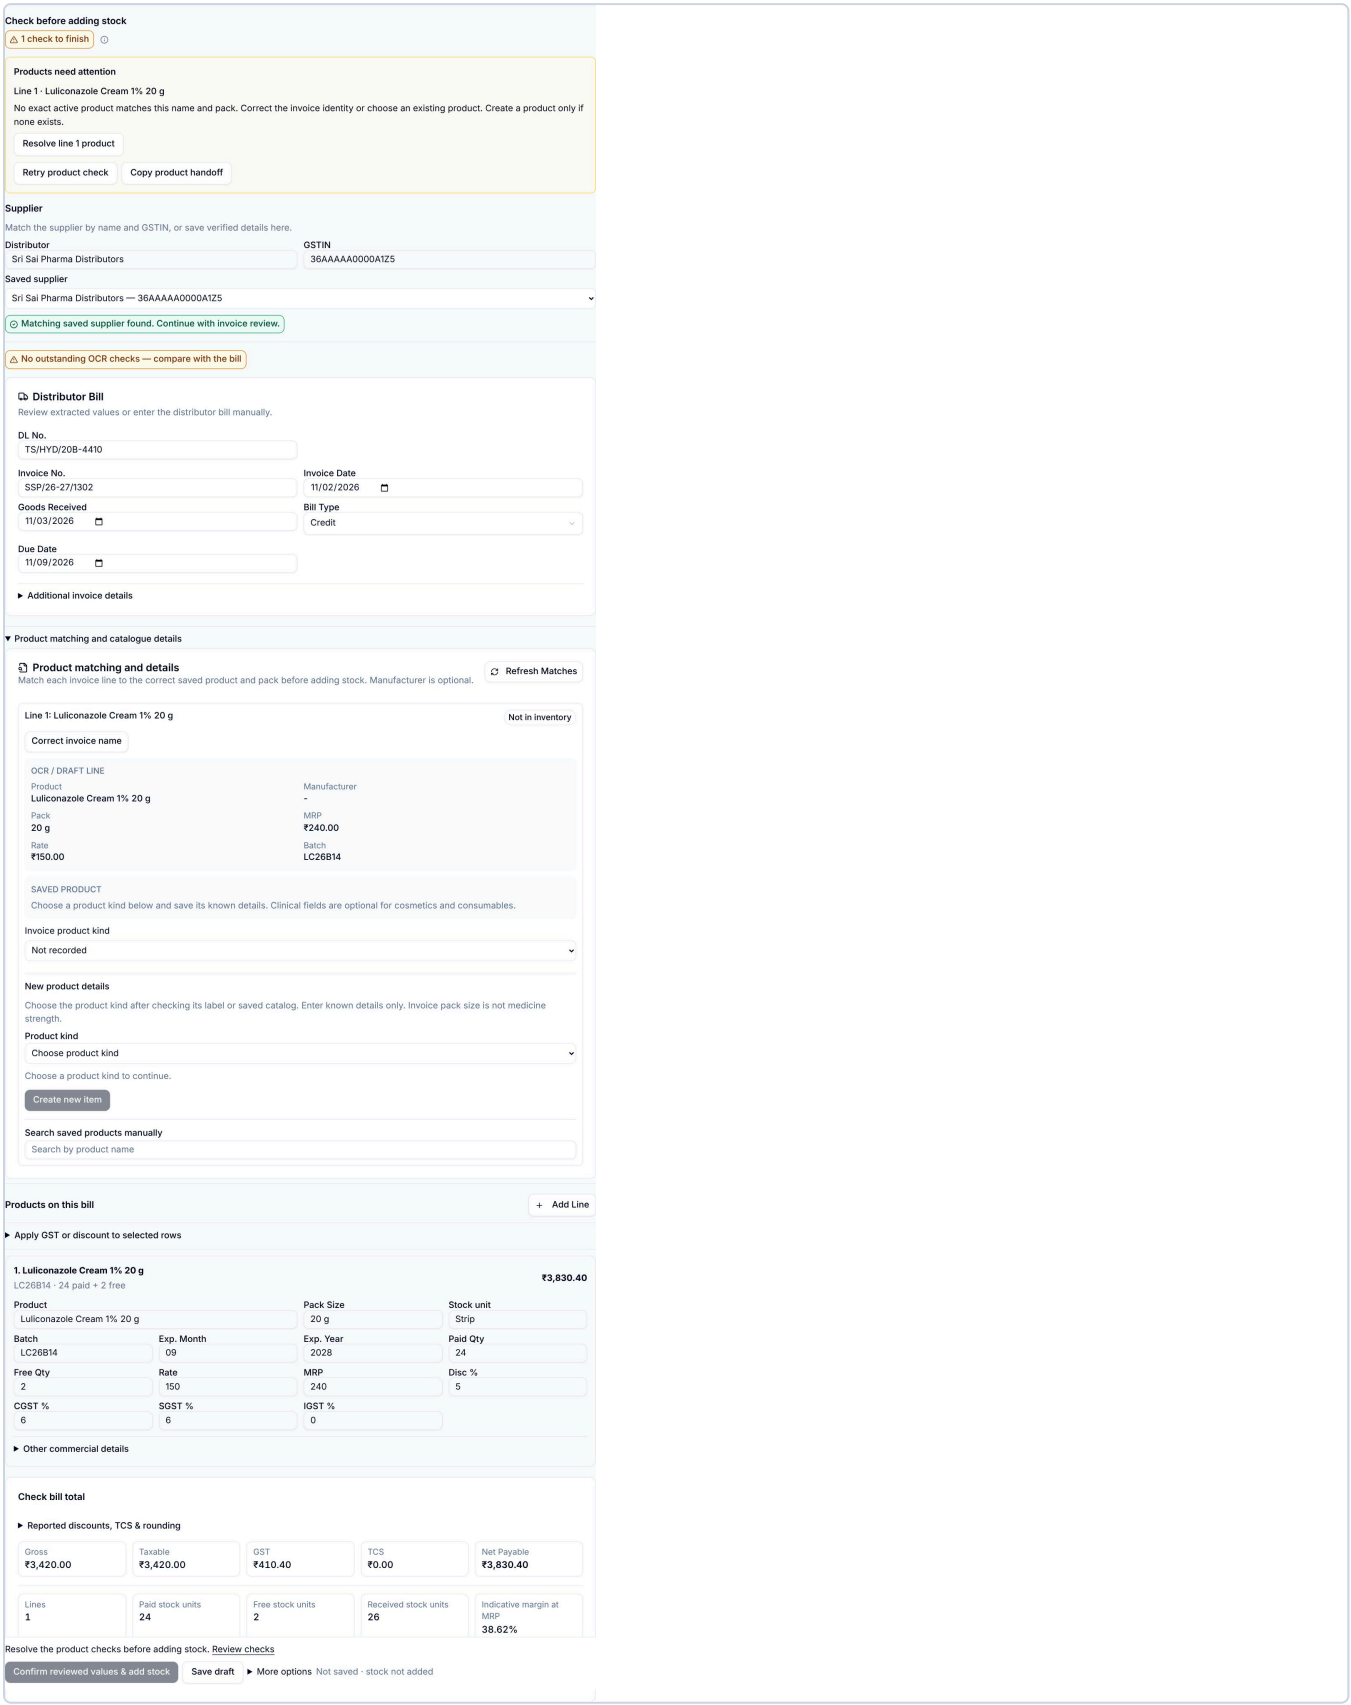

Figure 13.6. One line entered: product name as on the bill, pack size, batch and expiry, paid and free quantity, rate, MRP, discount and GST. Under the line ClinicMS works out the taxable value, GST and net payable.

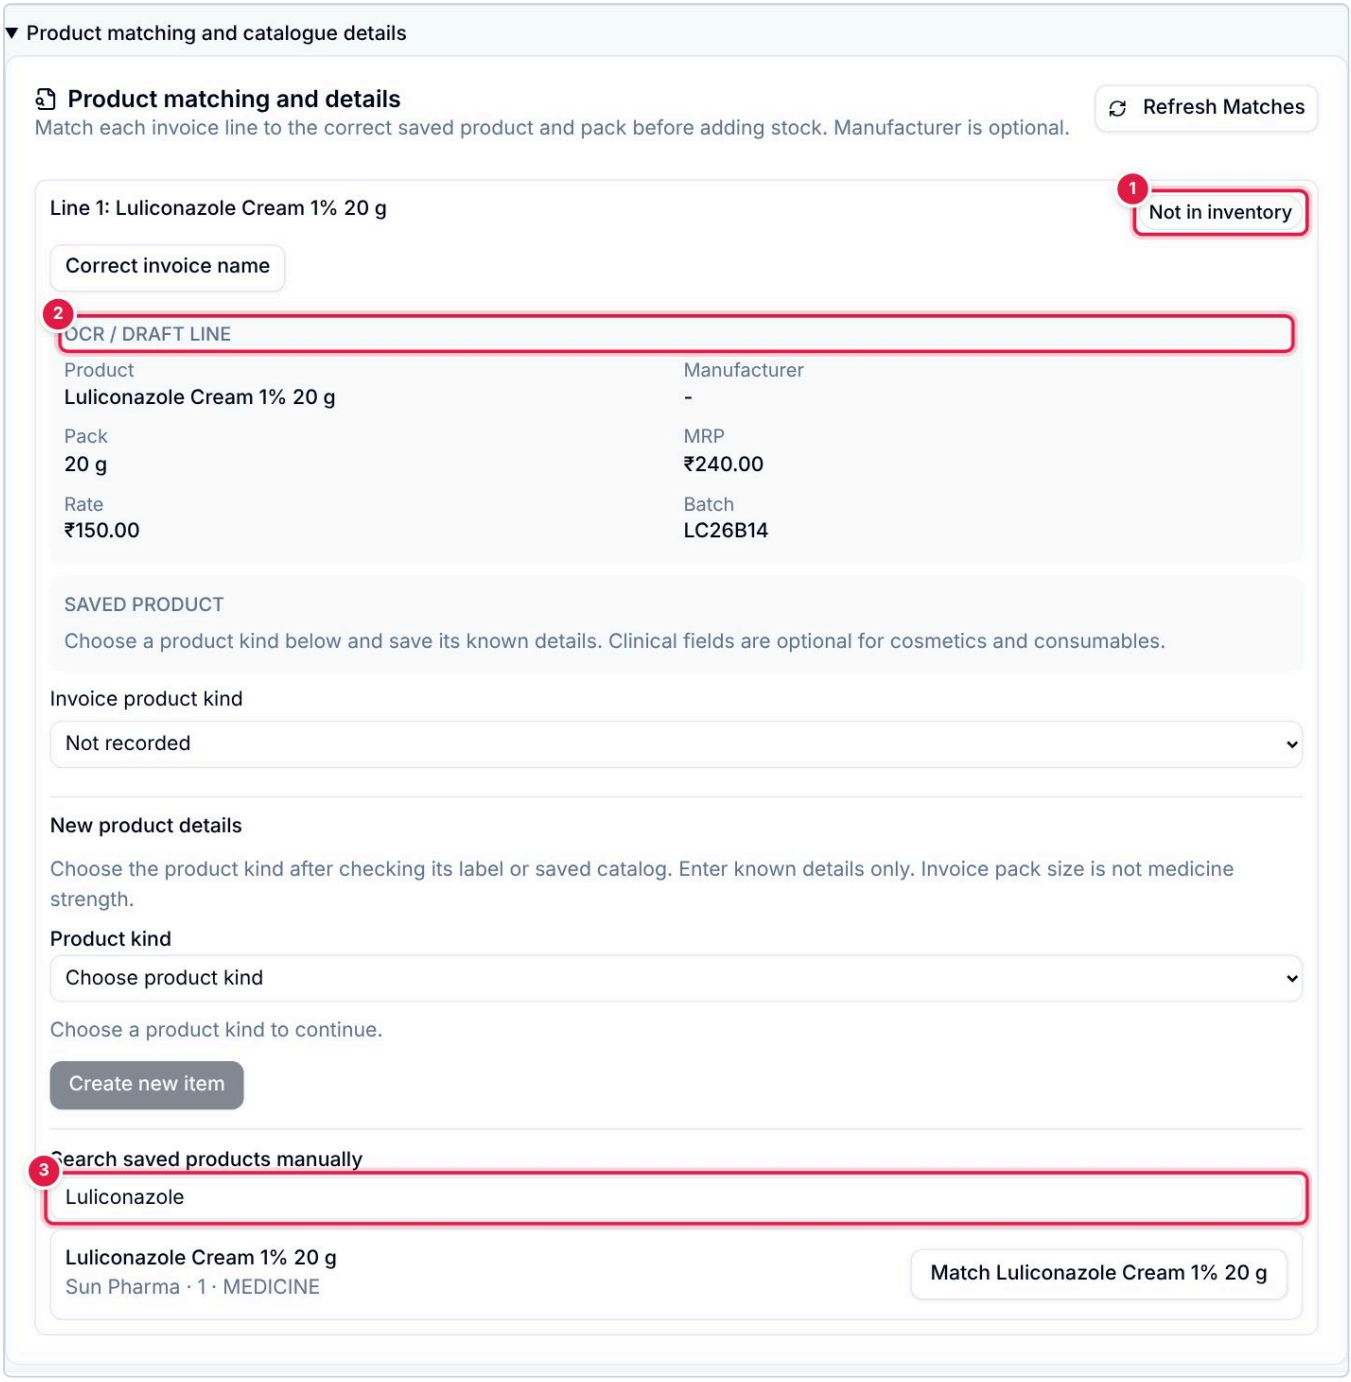

Figure 13.7. The line shows Not in inventory, because a pack of "20 g" does not fit the saved product. (1) the match status, (2) the invoice line, (3) search saved products by hand.

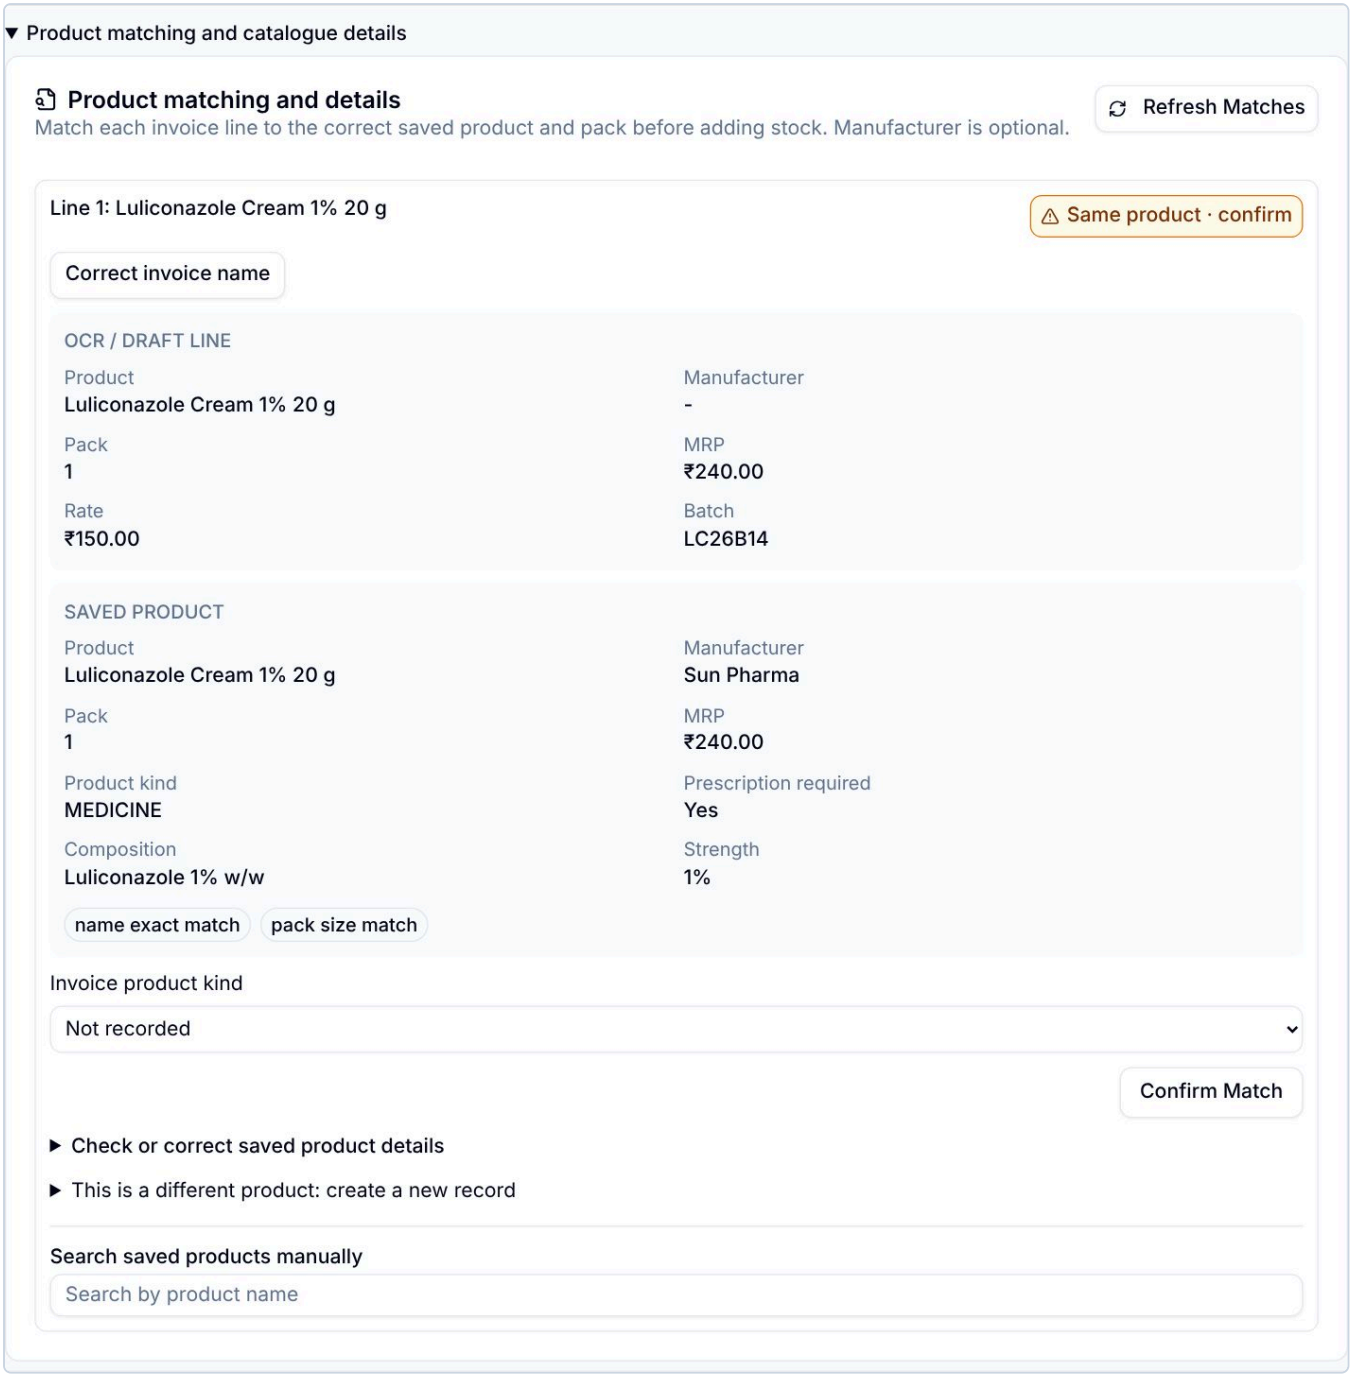

Figure 13.8. After correcting the pack size to 1, ClinicMS finds the product: Same product · confirm. The invoice line is on top and the saved product beneath, with the reasons it matched (name exact match, pack size match). Confirm Match is at the right.

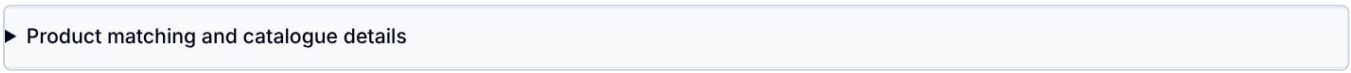

Figure 13.9. ClinicMS asks for the medicine's missing details. Fill them from the pack label, then click Save details and recheck invoice.

FIELD	WHAT TO ENTER
Product	The name as printed on the bill.
Pack Size, Stock unit	How many units are in a pack and the unit the pharmacy counts in. Must agree with the saved product, otherwise the match fails.
Batch, Exp. Month, Exp. Year	Batch number and expiry month and year printed on the pack. Needed to track and recall stock.
Paid Qty, Free Qty	Units paid for and units given free. Both are added to stock.
Rate, MRP	Purchase price per unit before GST, and the printed maximum retail price.
Disc %, Special %, Scheme amount	Discount given on the line. Reduces the taxable value.
CGST %, SGST %, IGST %	GST rates. Use CGST and SGST for a distributor in your state, IGST for another state.
HSN	The tax classification code for the product.
Taxable, GST, Effective Cost	Worked out for you. Effective cost is what each unit really cost after discount and free units.

> **TAKE CARE**
> Match every line to the right product. Stock added under the wrong medicine will be sold and counted as that medicine.

13.6 Review the bill and add the stock

WHO USES THIS Pharmacists

Before stock is added, ClinicMS checks the bill. The line **Check before adding stock** near the top counts the checks still open, for example a missing drug licence, HSN or batch. Click **Next check** and **Previous** at the bottom to step through them. Open checks also show as red boxes with a **How to fix** note and a link that jumps to the field. The button **Confirm reviewed values & add stock** stays grey until every check is cleared.

Look at **Check bill total**. It shows gross, taxable value, GST, TCS and the net payable ClinicMS calculated. It must equal the total printed on the bill. Under **Reported discounts, TCS & rounding** you can enter bill-level amounts such as trade discount, TCS and rounding so the totals match the paper.

Adding stock is final for the pharmacy's records. After it succeeds, the bill is a posted purchase: the batches appear in the stock list, and the bill is owed to the distributor.

1. Read the line **Check before adding stock**. It should say **Ready for your final check**.
2. Compare **Net Payable** under **Check bill total** with the total on the paper bill.
3. Click **Confirm reviewed values & add stock**.

4 Wait for the green **Stock added** message. It names the batches and how many units were added.

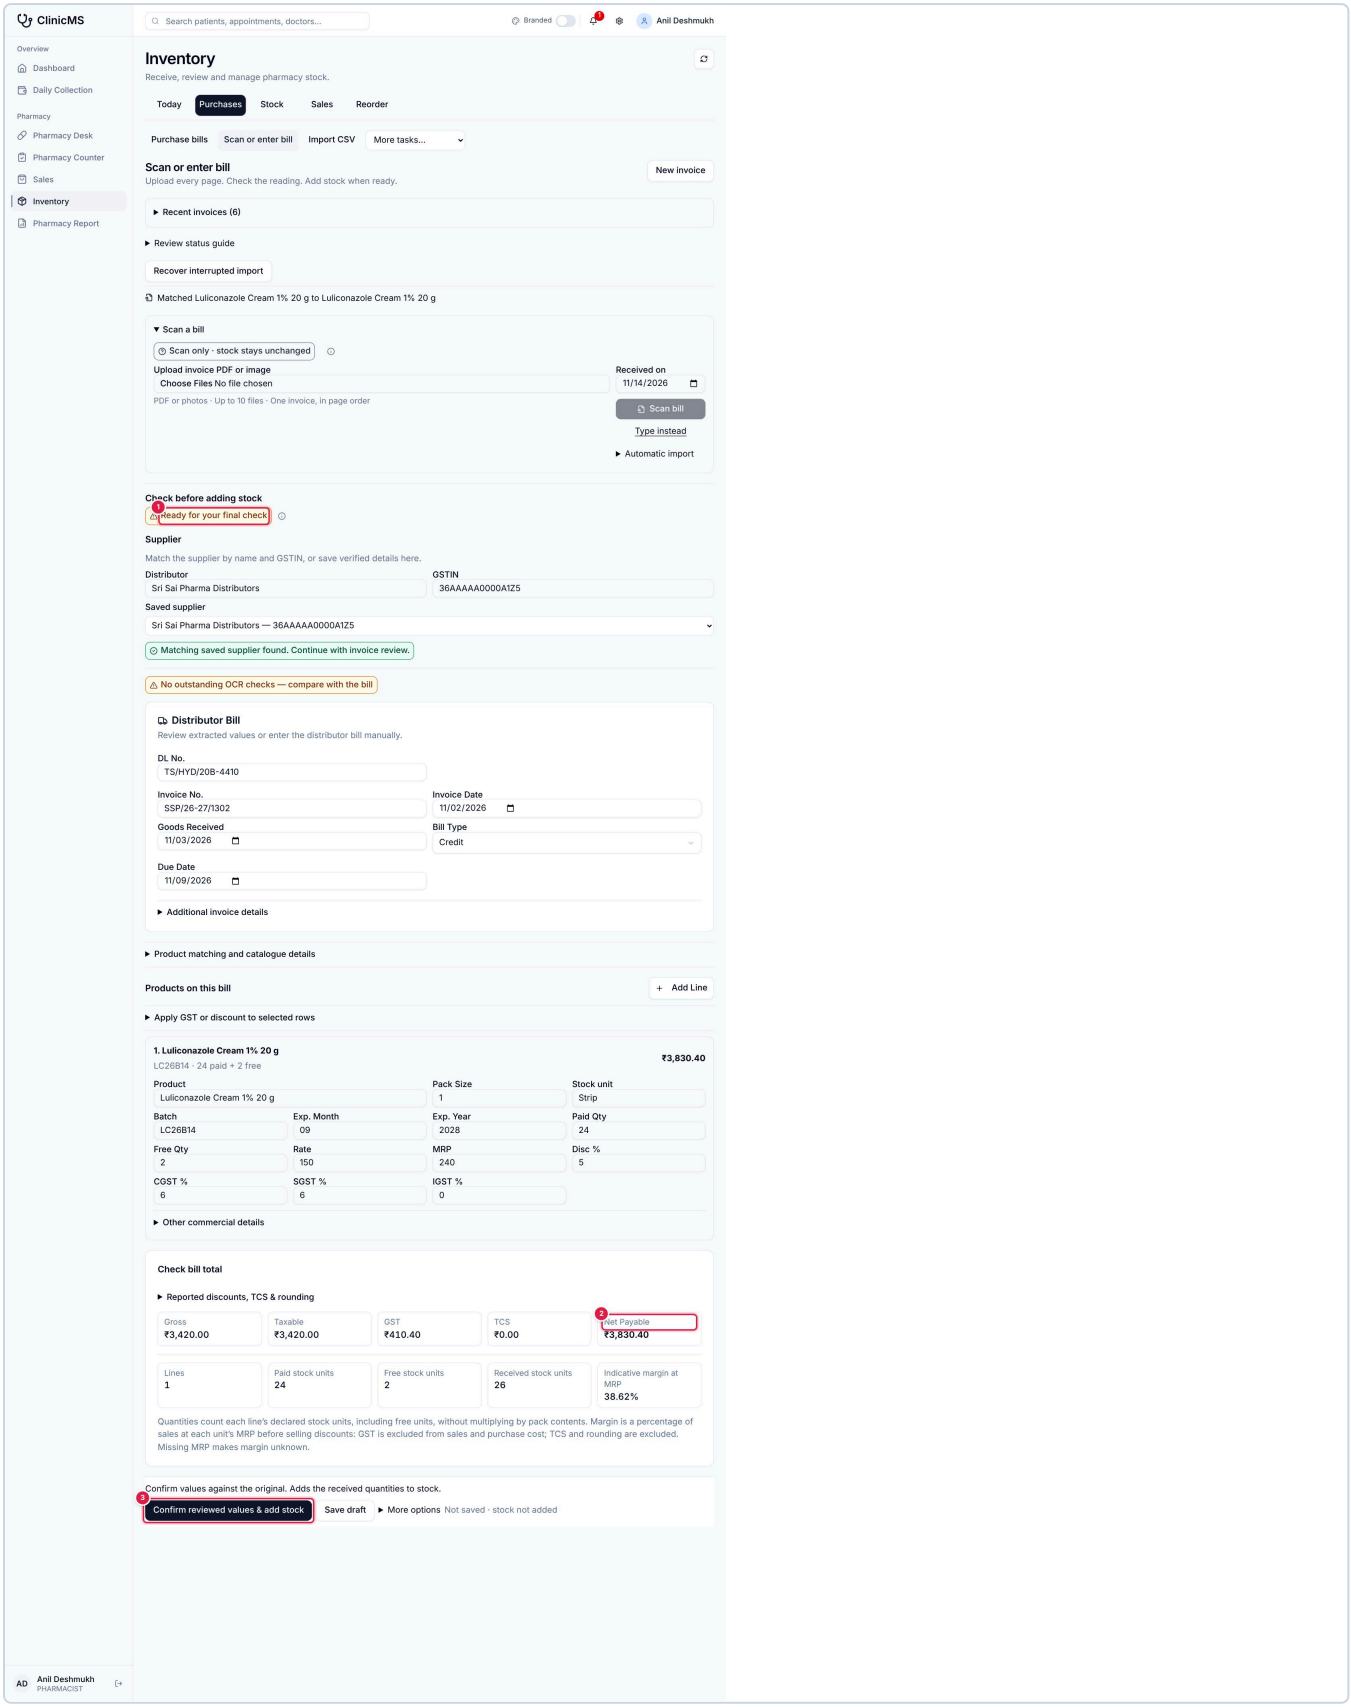

Figure 13.10. Every check is clear. (1) the check counter says Ready for your final check, (2) the calculated totals, (3) Confirm reviewed values & add stock.

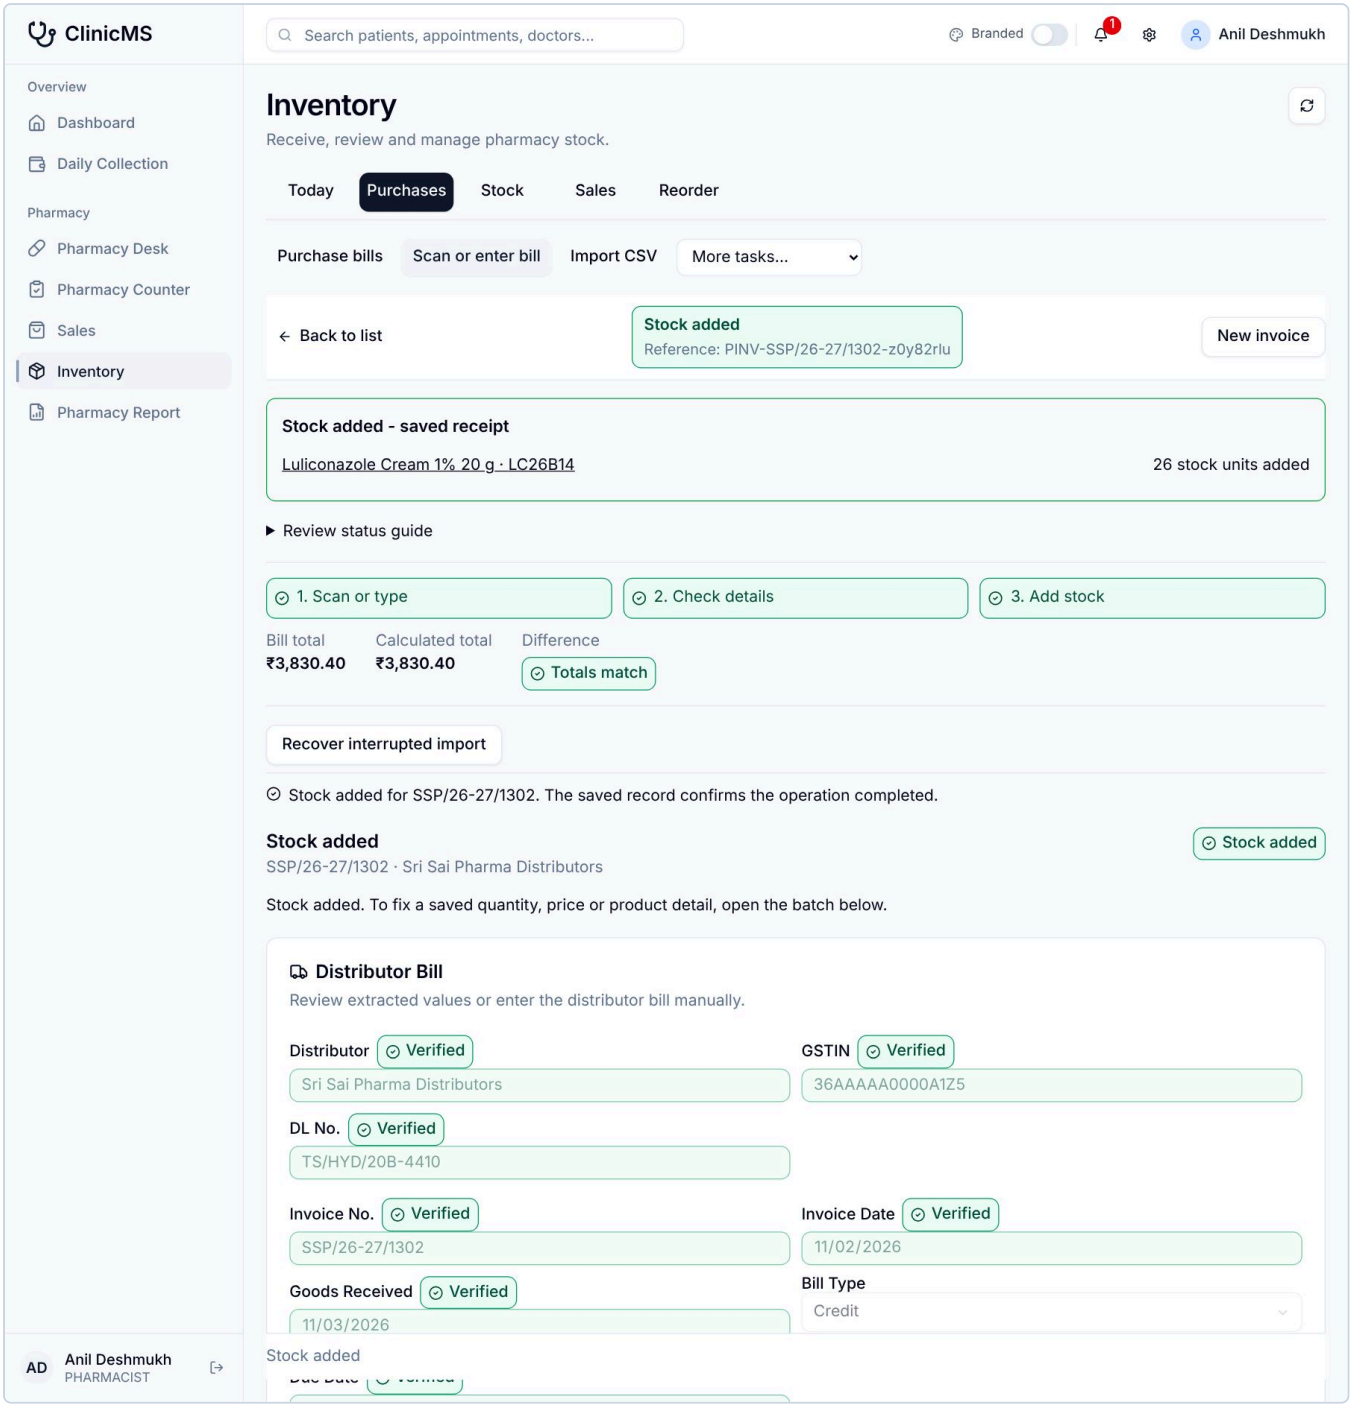

Figure 13.11. Stock added. The bill shows the three steps complete, the batches added and the totals.

> **TAKE CARE**
> Adding stock cannot be undone from this page. If a quantity, price or product detail is wrong afterwards, open the batch from the bill (or the stock list) and correct it there. See the chapter Inventory: today and stock.

13.7 Understand bill and payment statuses

WHO USES THIS Pharmacists, admins, owners

Two separate things are tracked for each bill: whether its stock has been added, and whether the distributor has been paid. The register shows the payment state in the last column. The bill status appears in **More filters** under **Bill status**.

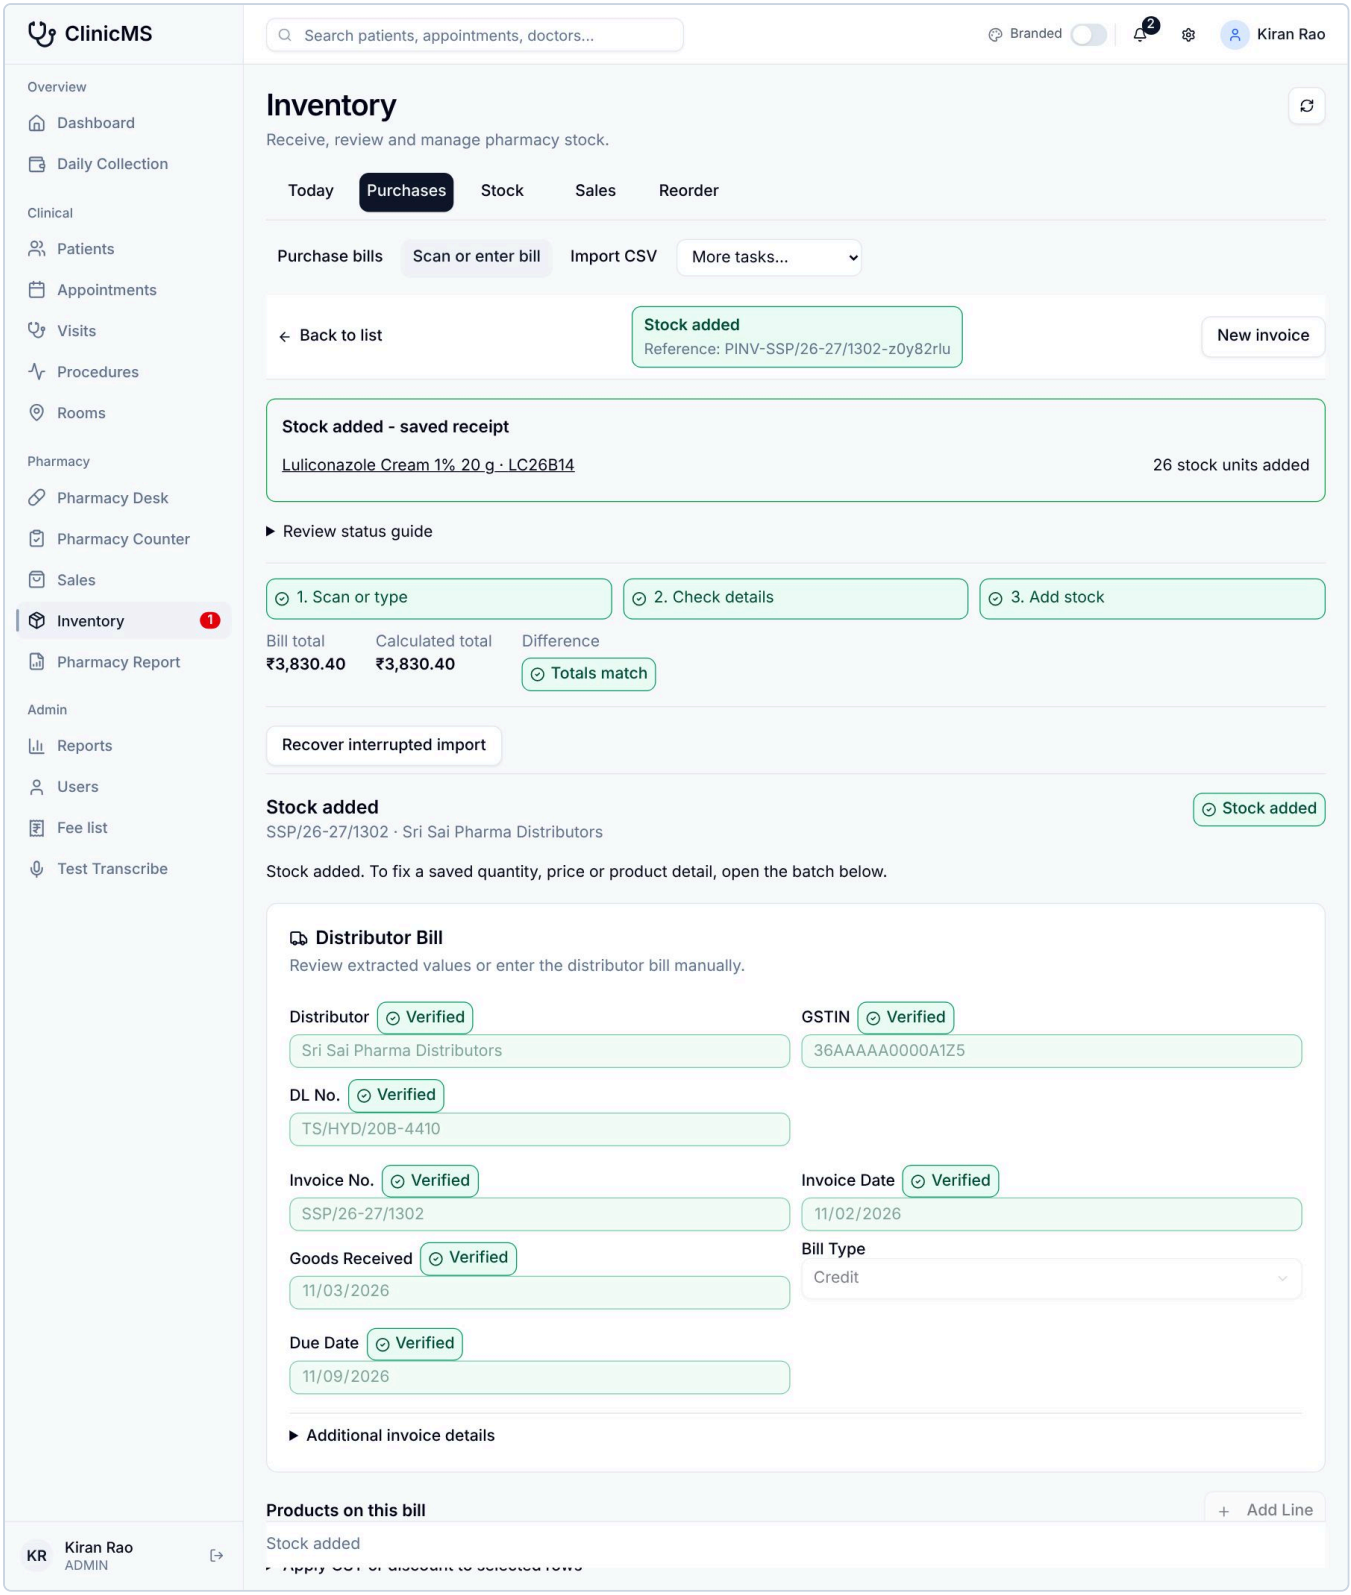

Figure 13.12. An open bill shows the distributor, the lines, the stock added and the totals. Use the back arrow to return to the list.

WORD	MEANING
Not posted	The bill is a draft or still being checked. Stock has not been added and nothing is owed yet. Hold the mouse over the badge for the reason.
Due	Stock is added and the bill is unpaid but not yet past its due date.
Overdue	Unpaid and past its due date. The badge also tells you how many days late.
Part paid	Some money has been paid; a balance remains.
Paid	Nothing more is owed on the bill.
Cancelled	The bill was cancelled. It is shown crossed out and is left out of the totals.
Draft	Bill status: saved but not finished.
Any review step	Bill status: the bill is somewhere between being scanned and being added to stock.
OCR review required	Bill status: a scanned bill whose reading must be checked by a person.
Reconciliation failed	Bill status: the lines do not add up to the printed total. Correct the lines before adding stock.
Reviewed	Bill status: checked and ready for the final step of adding stock.
Stock added	Bill status: the stock is in the pharmacy and the bill is a purchase on record.
Typed in, Scanned, CSV import, Gmail	Source: how the bill was entered.

13.8 Drafts and recovery

WHO USES THIS Pharmacists

Click **Save draft** whenever you have to stop. The bill is saved, no stock is added, and it appears in the bill list with the status **Not posted**. Open it again from **Recent invoices** on the Scan or enter bill page, or from the register, and carry on. A bill that has been scanned but not finished is a draft too. The Today page counts these as **Purchase invoices to review**.

Recover interrupted import is for the rare case when a scan, a save or an add-stock step was cut off, for example by a lost connection. It asks for the reference that was shown to the person who started the work. Recovery checks whether the bill and its stock were actually saved and stops unfinished work safely, so stock is never added twice. Stock whose history is unknown stays locked until it is counted on the shelf.

1. Click **Scan or enter bill**.
2. Click **Recent invoices** to open the list.
3. Click the bill to continue. A draft opens in the same form you started with.
4. If an import was interrupted, click **Recover interrupted import** and follow the prompts.

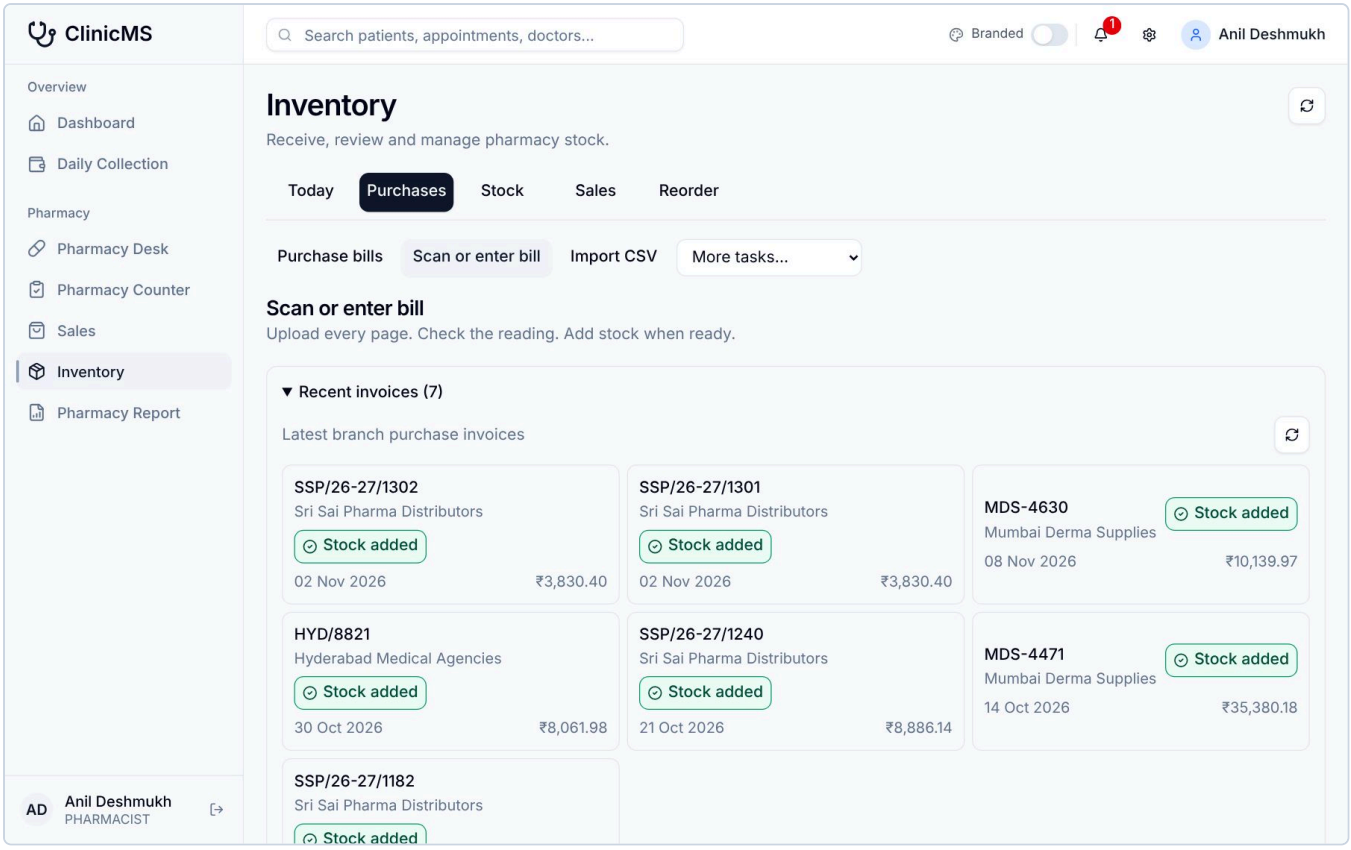

Figure 13.13. Recent invoices lists the latest bills, including the one just posted. Click one to reopen it.

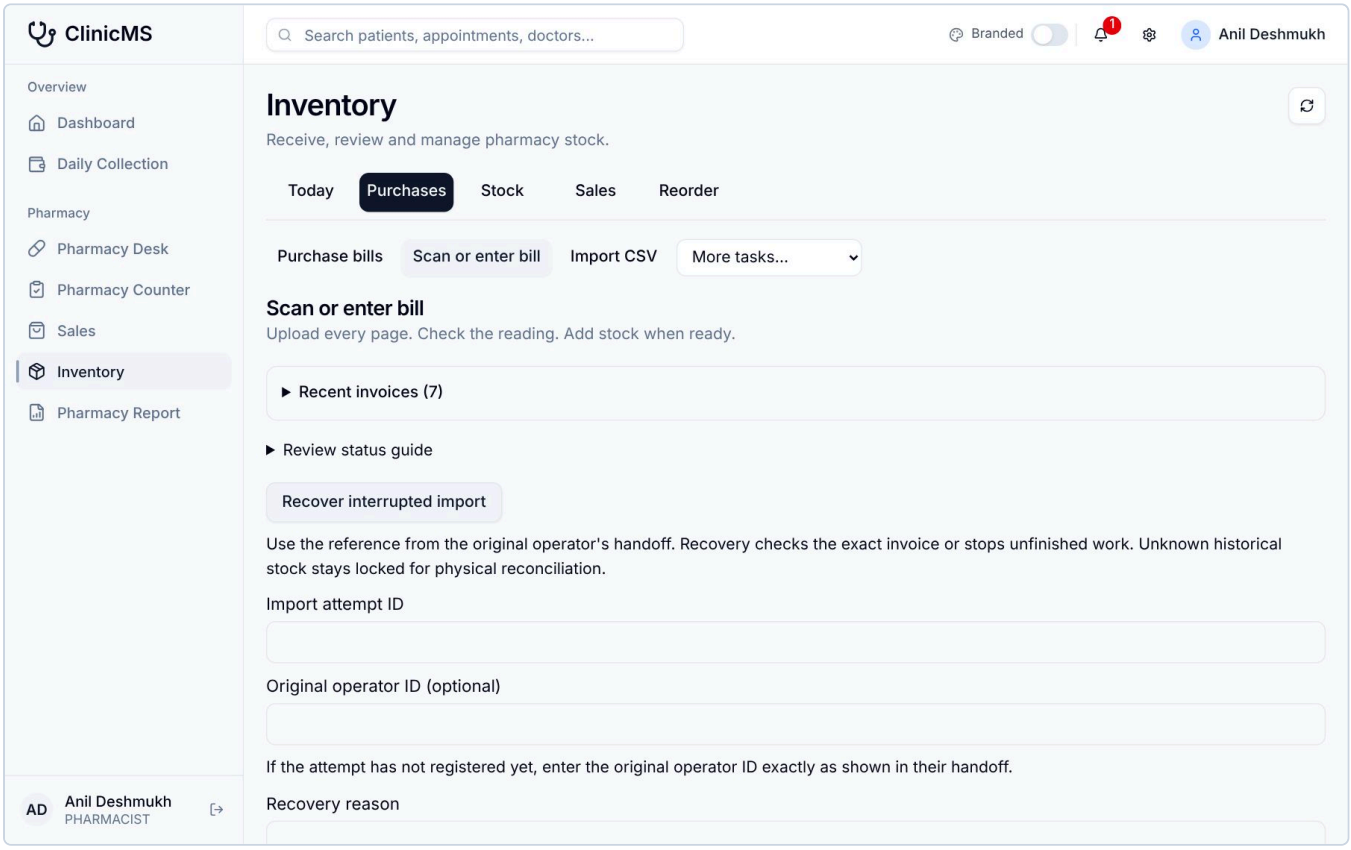

Figure 13.14. Recover interrupted import asks for the reference of the interrupted work.

13.9 Import a bill from a CSV file or Gmail

WHO USES THIS Pharmacists, admins

Some distributors send their bills as a spreadsheet. **Import CSV** reads such a file into a review draft. The draft then goes through the same checks as a typed bill, and nothing is added to stock until you confirm it.

Gmail intake, in the **More tasks…** list, lists bill attachments that arrive by email so you can open one as a review draft. It needs your administrator to connect the pharmacy's Gmail first; until then the page says so and points you to photo, PDF and CSV entry.

1. Click **Import CSV**.
2. Open **CSV format and required columns** to see which columns the file must have. The download button next to the title gives you a blank sample file.
3. Click **Choose File** and pick the CSV.
4. Click **Open review draft**, then review the draft as for a typed bill.

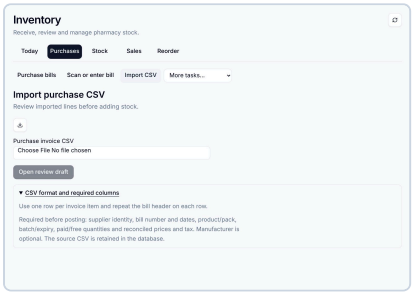

Figure 13.15. Import CSV.

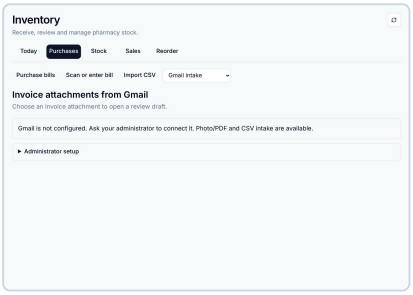

Figure 13.16. Gmail intake before Gmail is connected.

13.10 Keep the distributor list

WHO USES THIS Pharmacists, admins

Suppliers is the saved list of distributors. Every bill, return and payment is attached to one of these records, matched by the GSTIN. Add a distributor here before you enter its first bill. Each row shows its details; click a row to see or change them, and use the links on the row to open that distributor's bills or its account in Payments & dues.

1. Open **More tasks…** and choose **Suppliers**.
2. Click **Add supplier**.
3. Type the **Supplier name** and the 15-character **GSTIN**.
4. Add the **Drug licence**, **Contact person**, **Phone**, **Address** and **Payment terms** if you have them.
5. Leave **Active supplier** ticked, then click **Save supplier**.

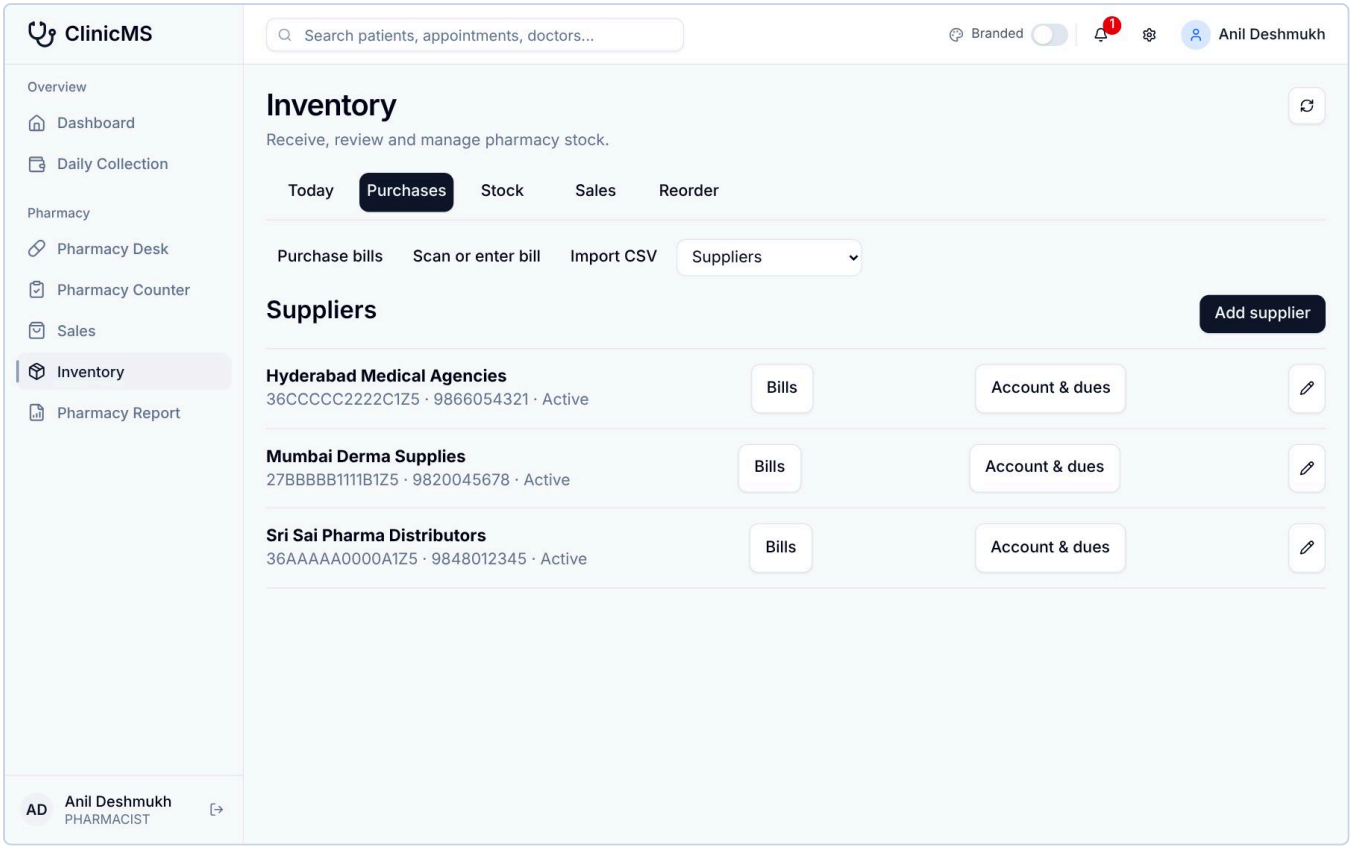

Figure 13.17. The supplier list.

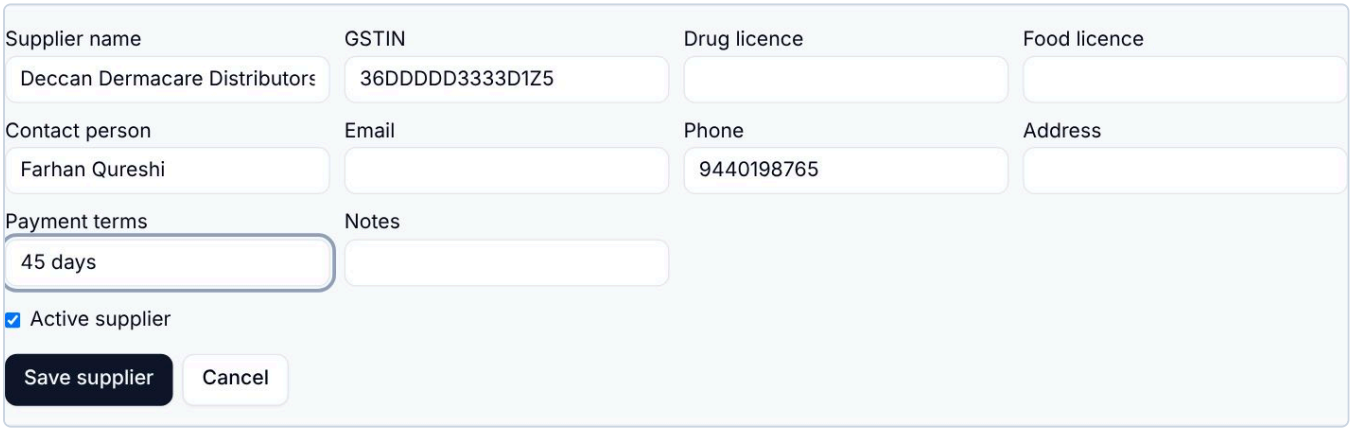

Figure 13.18. The Add supplier form, filled in for a new distributor. Nothing is saved until you click Save supplier.

FIELD	WHAT IT HOLDS
Supplier name, GSTIN	The distributor's name and GST number as on its bills. The GSTIN must match the bill.
Drug licence, Food licence	The distributor's licence numbers. Bills need the drug licence.
Contact person, Email, Phone, Address	Who to call and where to send enquiries.
Payment terms	A reminder of the agreed credit period, for example 30 days.
Notes	Anything staff should know about this distributor.

Active supplier	Untick to stop a distributor being chosen on new bills, without deleting its history.

13.11 Pay a distributor and watch overdue bills

WHO USES THIS Pharmacists, admins, owners (purchase ledger permission)

Payments & dues is the purchase ledger. It shows how much the pharmacy owes in total, how much is overdue and what is due soon, then a summary per distributor, the age of the debts and alerts. Use it each week to decide whom to pay. The register's **Outstanding** total and the Today row **Overdue supplier bills** both lead here.

A bill becomes overdue when its due date has passed. The bill entered in this chapter was a credit bill with a due date five days ago, so it appears as overdue.

You can record a payment in two places. In the bill list, click **Mark paid** on a row to settle that one bill. In Payments & dues, choose the distributor in the payment form further down, enter the amount and split it across that distributor's unpaid bills.

1. Open **More tasks…** and choose **Payments & dues**.
2. Read the cards at the top and the **Distributor Summary**. Click a distributor to see its bills.
3. To pay one bill, go to **Purchase bills** and click **Mark paid** on its row.
4. Choose the **Mode**: Cash, Cheque, NEFT / RTGS, UPI or Card.
5. Check the date and amount. For a cheque or transfer, type the number in **Cheque / UTR no.**.
6. Click **Record payment**. The row now reads **Paid** (or **Part paid**) and an **Undo** button stays beside it for a short time if you made a mistake.

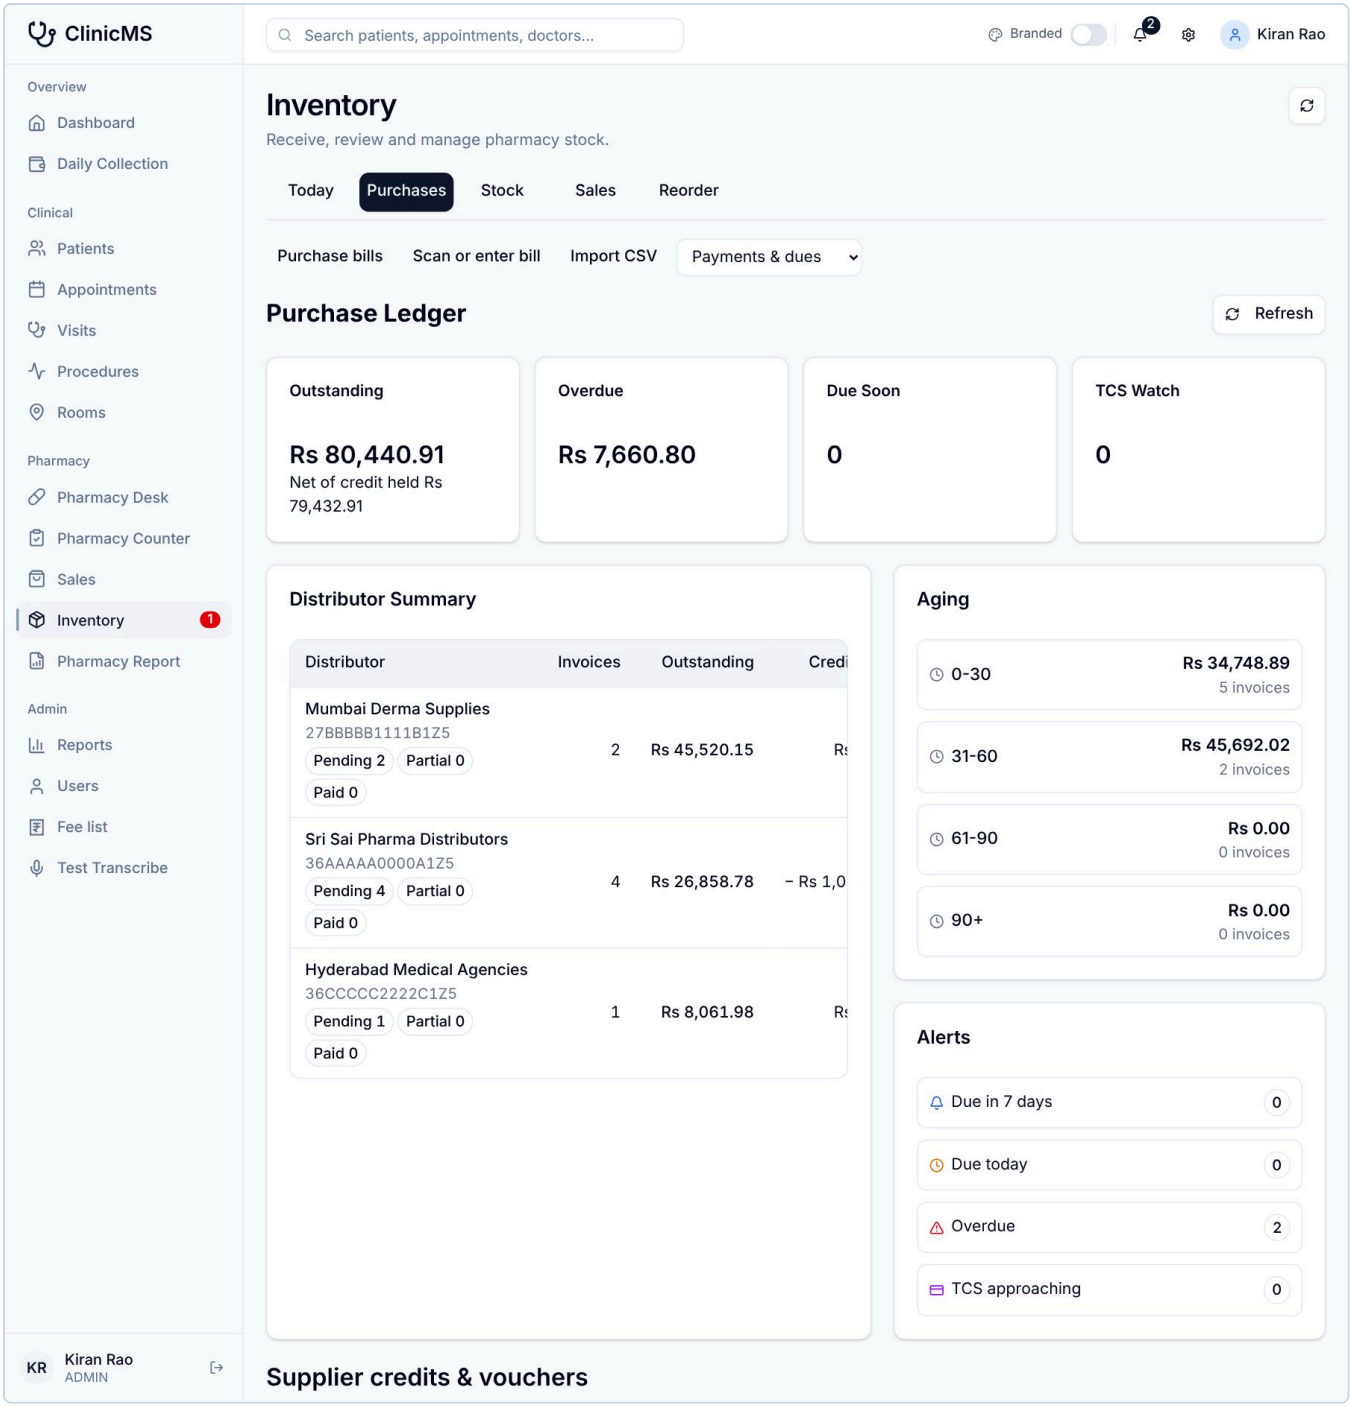

Figure 13.19. Payments & dues. The overdue card is now above zero because of the credit bill entered earlier.

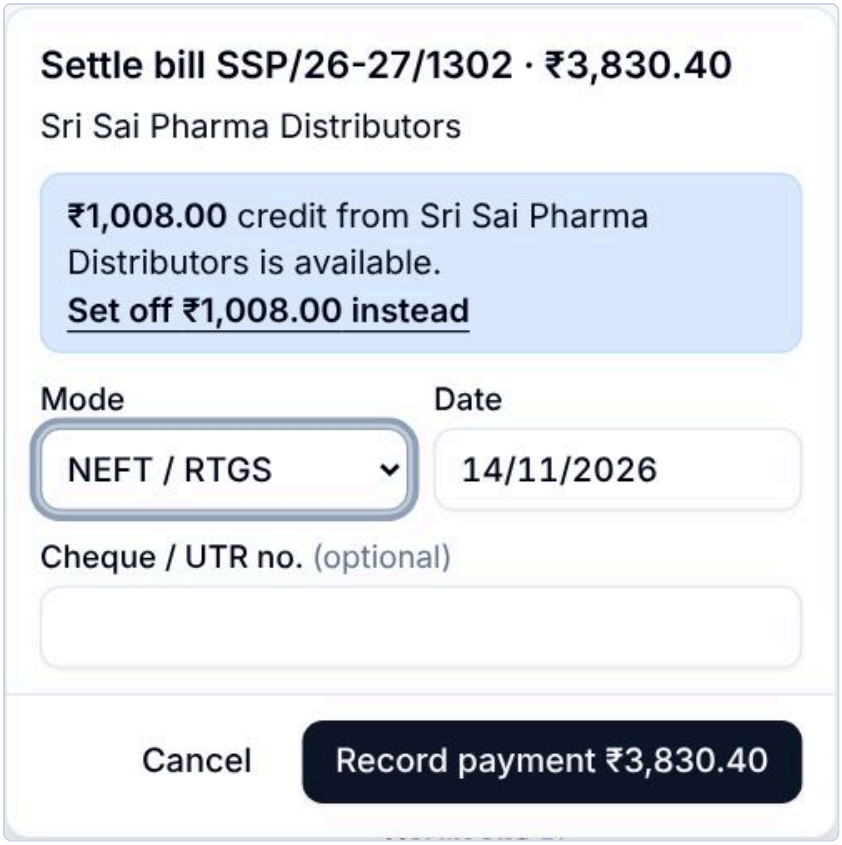

Figure 13.20. Mark paid opens a small window: mode of payment, date, amount and the cheque or transfer number. Nothing is recorded until you click Record payment.

CARD	MEANING
Outstanding	Total owed to all distributors, after any credit you hold.
Overdue	The part of that total already past its due date.
Due Soon	Bills falling due in the next few days.
TCS Watch	Bills where tax collected at source is approaching its limit.
Distributor Summary	One row per distributor: number of bills, outstanding, credit held and counts of pending, part paid and paid bills.
Aging	Outstanding amounts grouped by how old the bills are: 0 to 30, 31 to 60, 61 to 90 and over 90 days.
Alerts	Counts of bills due in 7 days, due today, overdue and with TCS approaching.

> **TIP**
> The distributor strip that appears above the bill list when you filter by one distributor shows what you owe it, the credit you hold from it and a button to set that credit off against its bills.

13.12 Return goods to a supplier

WHO USES THIS Pharmacists

When goods are near expiry, broken or wrongly supplied, you send them back to the distributor on a return challan, which is the paper that goes with the goods. ClinicMS records the return, takes the units off the shelf and then waits for the distributor's credit note. Returns are on the second tab of **Purchase bills**.

The return works in two steps. **Create return challan** posts the return: stock leaves the pharmacy now. **Record credit note** comes later, when the distributor sends its credit note, and turns the return into money you hold with that distributor.

1. Open **Purchase bills** and click the **Returns** tab. It lists the returns already made.
2. Click **New return**.
3. Choose the **Supplier**, and the **Reason for return**: Expired, Near expiry, Breakage, Wrong item supplied, Excess supply or Other. Add a **Note (optional)**.
4. Leave **Stock source** on **Available stock (no hold)**. Choose the **Return price basis**: purchase rate per stock unit, or an agreed rate that you type for each line.
5. Under **Add a batch**, search by product, batch, barcode or SKU, and click the batch to add it.
6. Type the **Quantity** to return. Check the rate, discount, GST and the total at the bottom.
7. Click **Create return challan**. A green message confirms it. Use **Save draft** instead if you are not ready; a draft does not change stock.

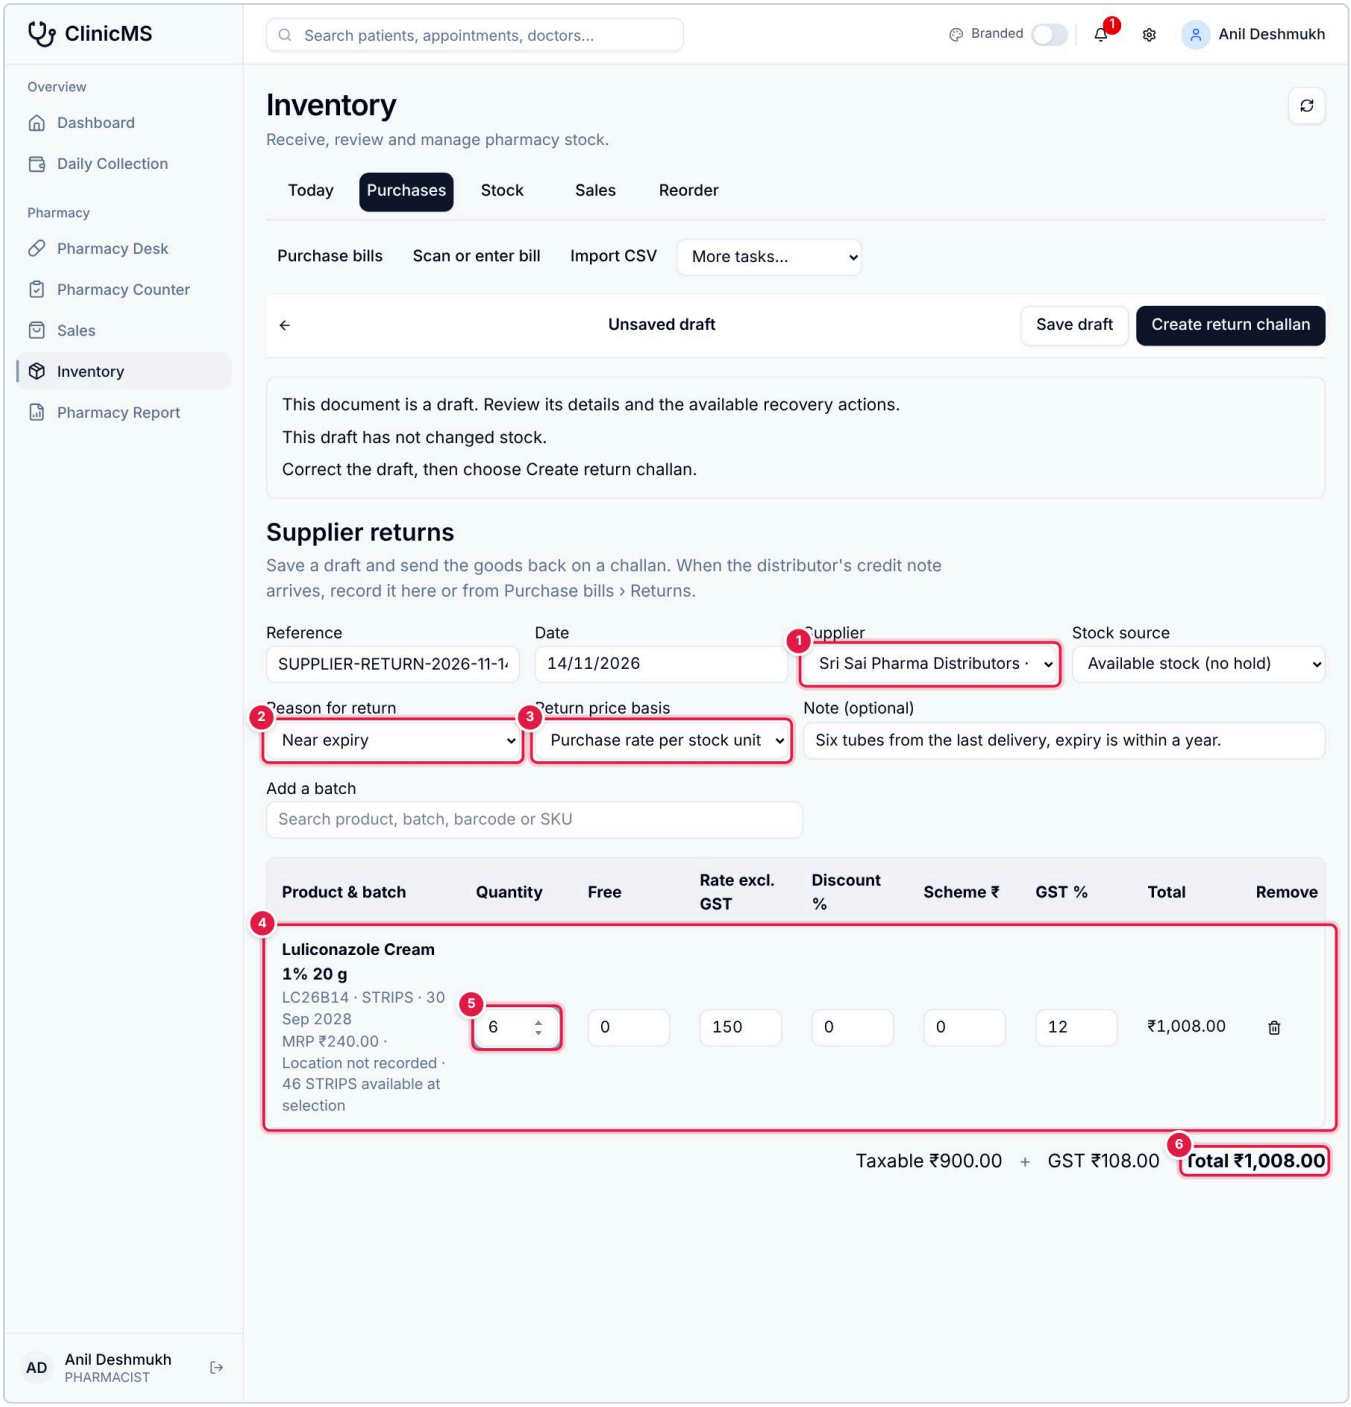

Figure 13.21. A new return for six tubes. (1) supplier, (2) reason, (3) price basis, (4) the batch added, (5) quantity, (6) totals.

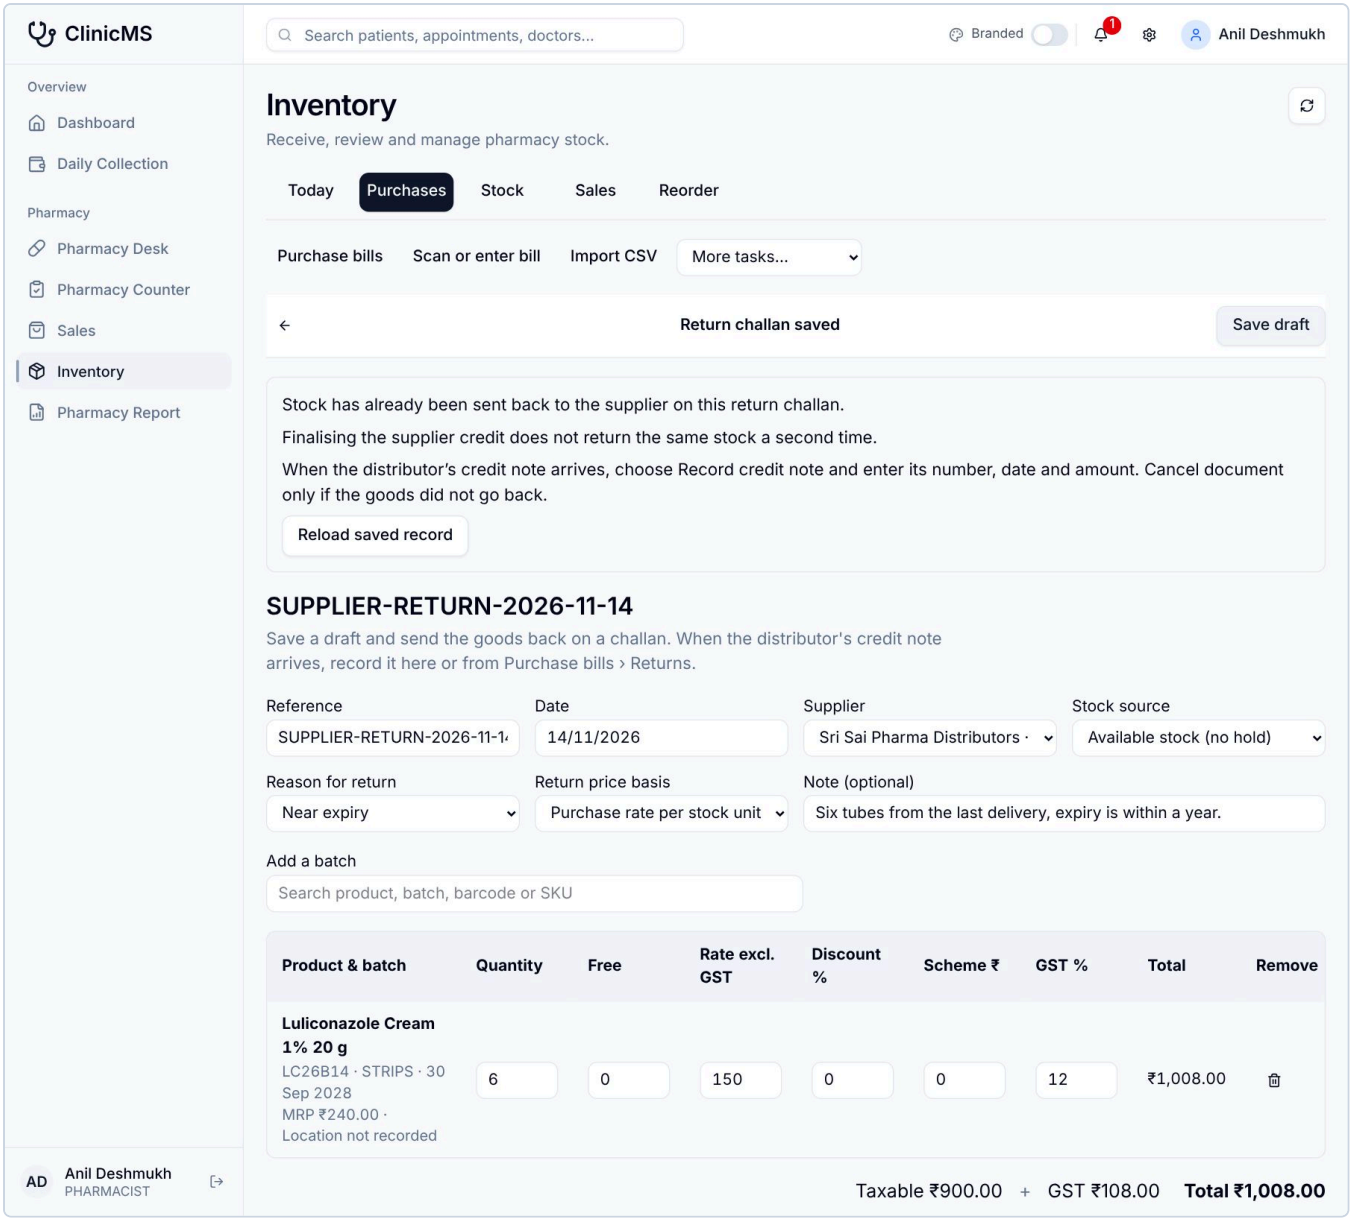

Figure 13.22. The return after Create return challan. The units have left stock, and the return now waits for the distributor's credit note.

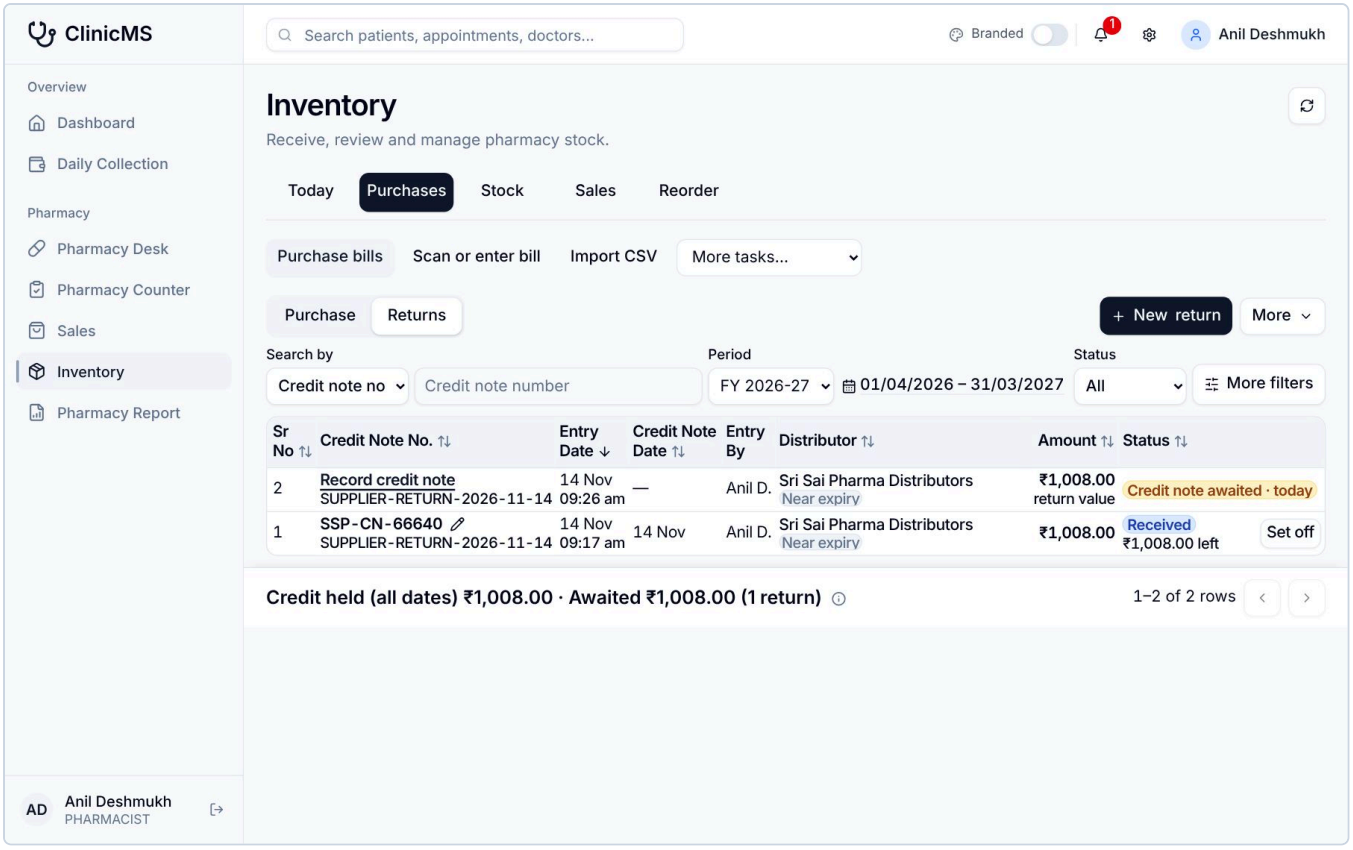

Figure 13.23. The Returns tab after the return was made. The row shows the distributor, the value, and the status Credit note awaited. Record credit note on the row opens the credit note window.

FIELD	MEANING
Reference	A number for the return, filled in for you. You can change it.
Stock source	Which stock the batch list draws from. The default is stock that is not on hold.
Return price basis	Whether the credit you expect uses the purchase rate or a rate you agreed with the distributor.
Free	Free units on the line, if you are returning bonus stock.
Scheme ₹	A scheme amount to deduct from the line.

> **TAKE CARE**
> Create return challan takes the stock out of the pharmacy immediately. Count the goods and check the quantity before you click.

13.13 Record a supplier credit note

WHO USES THIS Pharmacists, admins, owners (purchase ledger permission)

A distributor usually sends a credit note some days after it receives returned goods. Record it so the pharmacy's books match: the credit becomes money you hold with that distributor, and you can set it off against its unpaid bills. **Credits & vouchers** lists the credit notes you have recorded and the supplier returns they belong to; a return still waiting for its note shows on the Returns tab as **Credit note awaited**. The Today row **Credit notes awaited** counts the waiting returns.

1. Open the **Returns** tab and find the return. It shows **Record credit note** on its row.
2. Click **Record credit note**.
3. Type the distributor's **Credit note no.** and **Credit note date** from its paper.
4. Type the **Amount (₹)** on the note, or click **Same as return value** if it equals the value of the return.
5. Click **Record credit note**. A message offers **Set off** so you can apply the credit to an unpaid bill straight away.

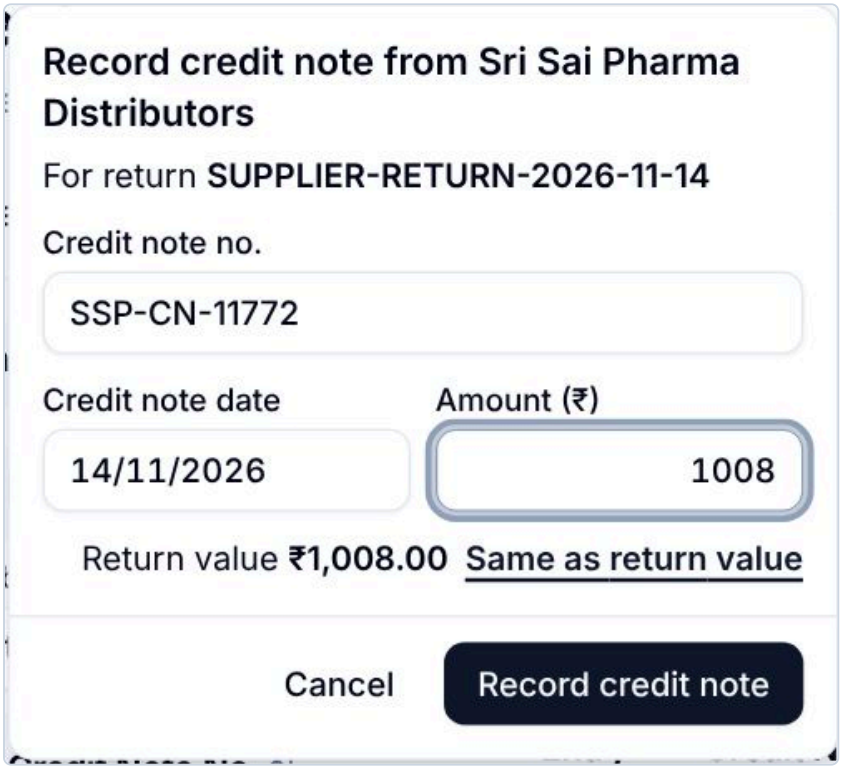

Figure 13.24. Recording the distributor's credit note against the return. The note number and date come from the distributor's paper. The note is saved when you click Record credit note.

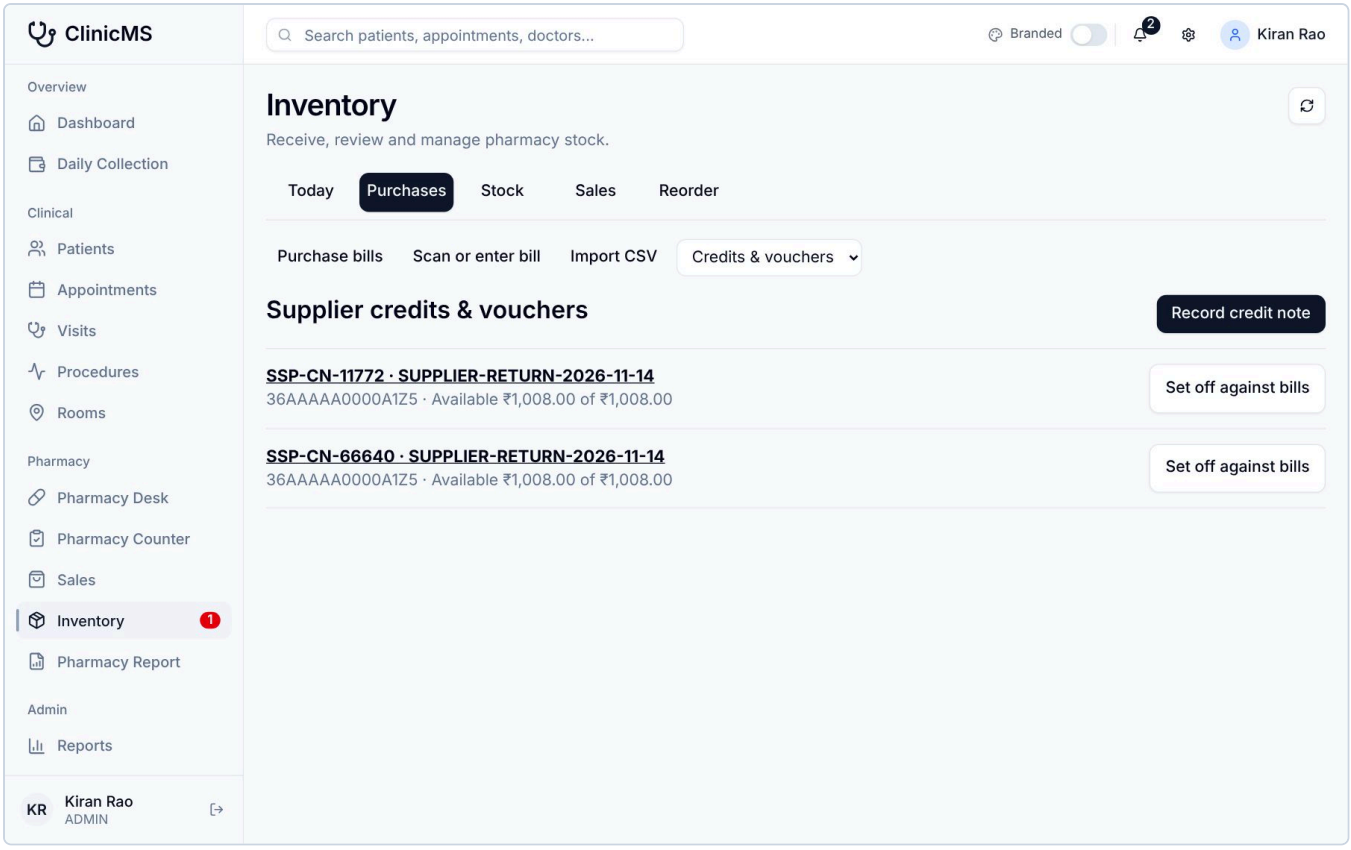

Figure 13.25. Credits & vouchers after the credit note was recorded. It lists each credit note with the distributor and the return it belongs to.

WORD	MEANING
Awaited	Value of returns sent to the distributor whose credit note has not yet been recorded.
Credit held	Credit from recorded notes that has not yet been set off against bills.
Set off	Using held credit to reduce the balance of one or more unpaid bills from the same distributor. A set-off can be undone from the message that appears afterwards.
Correct credit note	A recorded note can be corrected. You must give a reason, which is kept on record.

13.14 Check each distributor's agreed terms

WHO USES THIS Pharmacists, admins, owners

Terms of Trade stores what each distributor agreed to give you for each product, such as a rate and a discount. Whoever checks a delivery can compare the bill with the agreement and spot a price that crept up. Find the distributor, open it, and see its products and agreed terms.

1. Open **More tasks...** and choose **Terms of Trade**.
2. Type a name or GSTIN in **Find distributor**, or scroll the list.

3. Click the distributor to see its terms.
4. Click **Add terms** to record a new agreement.

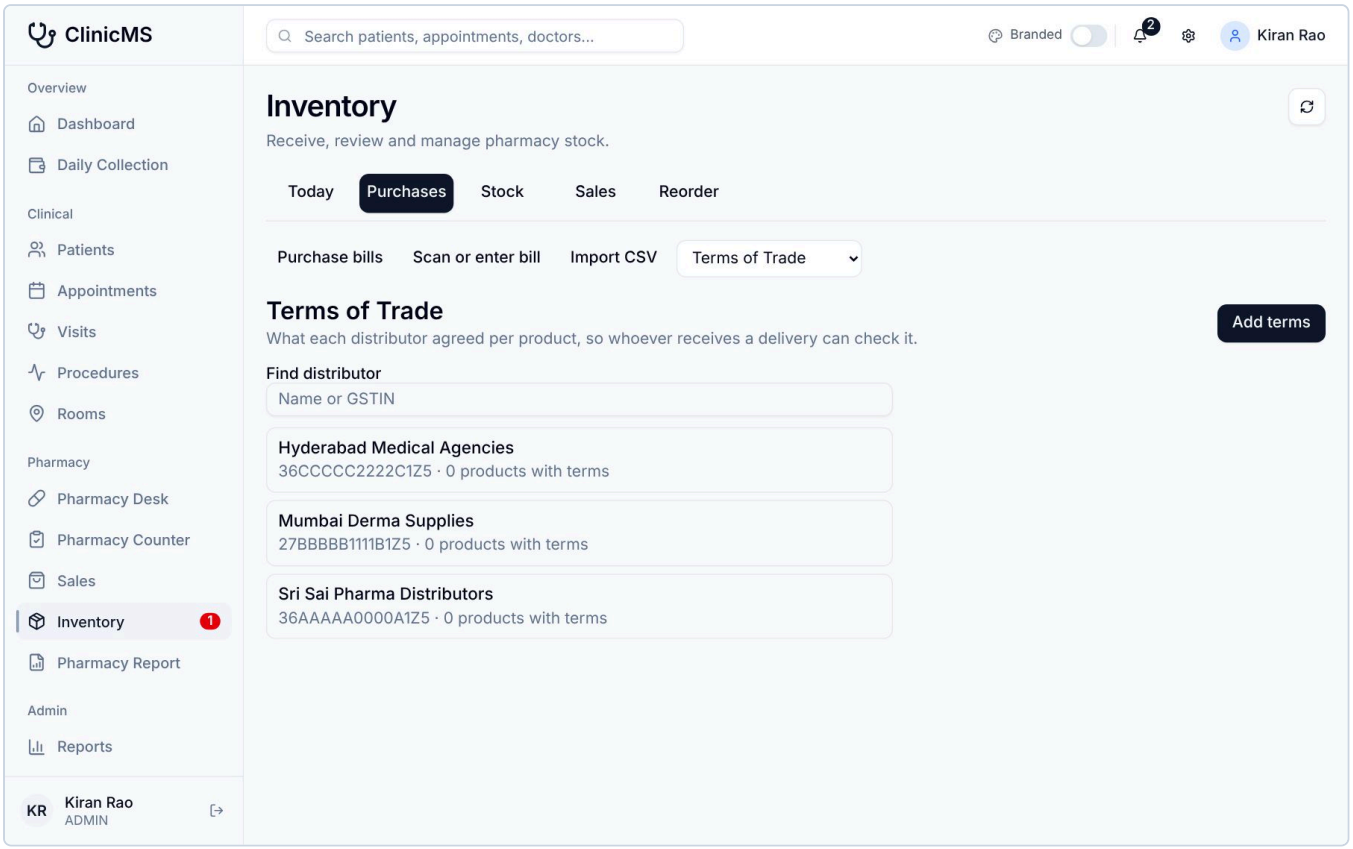

Figure 13.26. Terms of Trade lists the distributors and how many products have agreed terms.

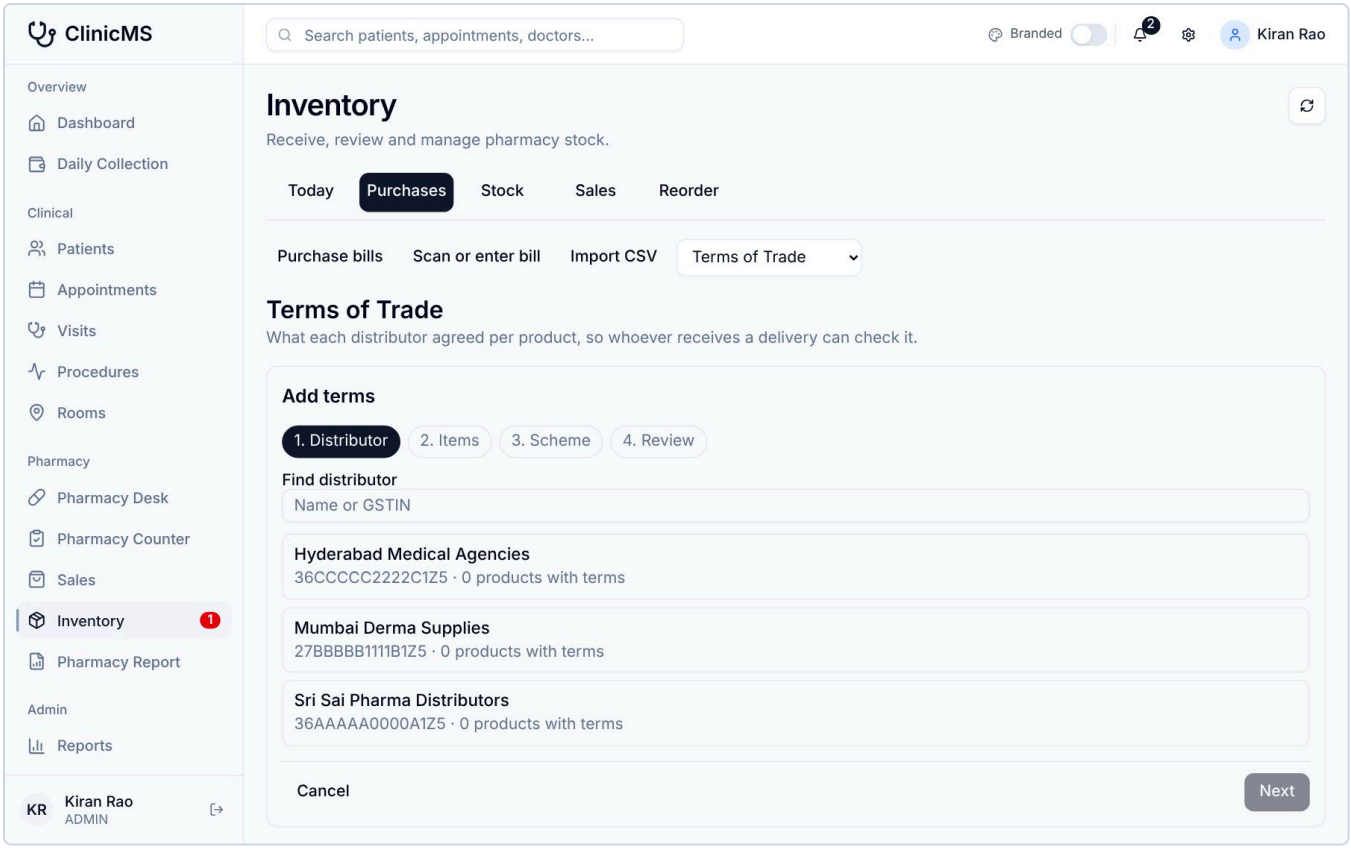

Figure 13.27. Add terms opens the form for a new agreement.

13.15 Inward challans and gate passes

WHO USES THIS Pharmacists, admins

Sometimes goods arrive before the bill. An **Inward challan** records the stock as received, so you can sell it, and the later bill is linked to the challan so the goods are not counted twice. A **Gate pass** only records a delivery's reference and its linked order or receipt. It has no effect on stock or money. Each page lists its documents and can be filtered by status, reference, date range and supplier GSTIN.

1. Open **More tasks...** and choose **Inward challans** or **Gate passes**.
2. Click **New document** to start one.
3. Use **Status**, **Reference**, **From date**, **To date** and **Supplier GSTIN** to find an older document.

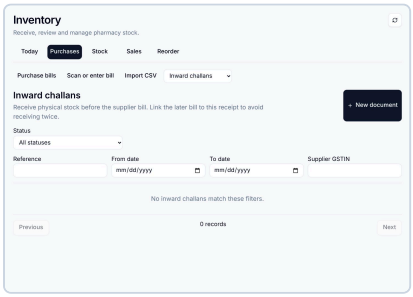

Figure 13.28. Inward challans.

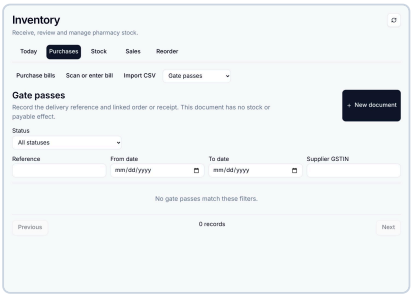

Figure 13.29. Gate passes.

13.16 Compare purchase costs and find the day-wise reports

WHO USES THIS Pharmacists, admins, owners

Purchase costs ranks the distributors by how much you bought from each, and the products by what each unit really cost you after discounts and free stock. Use it to see which distributor is cheapest for a product. It counts only reviewed purchases, and leaves out drafts that still have reading problems. Set the dates, GSTIN, product or HSN at the top and click **Refresh**; click **Reset** to go back to the default period.

The GST summary, day-wise summary and item margin reports used to be part of Inventory. They now live in **Pharmacy Report**, and old links to them take you to the same report there. See the chapter on the pharmacy report.

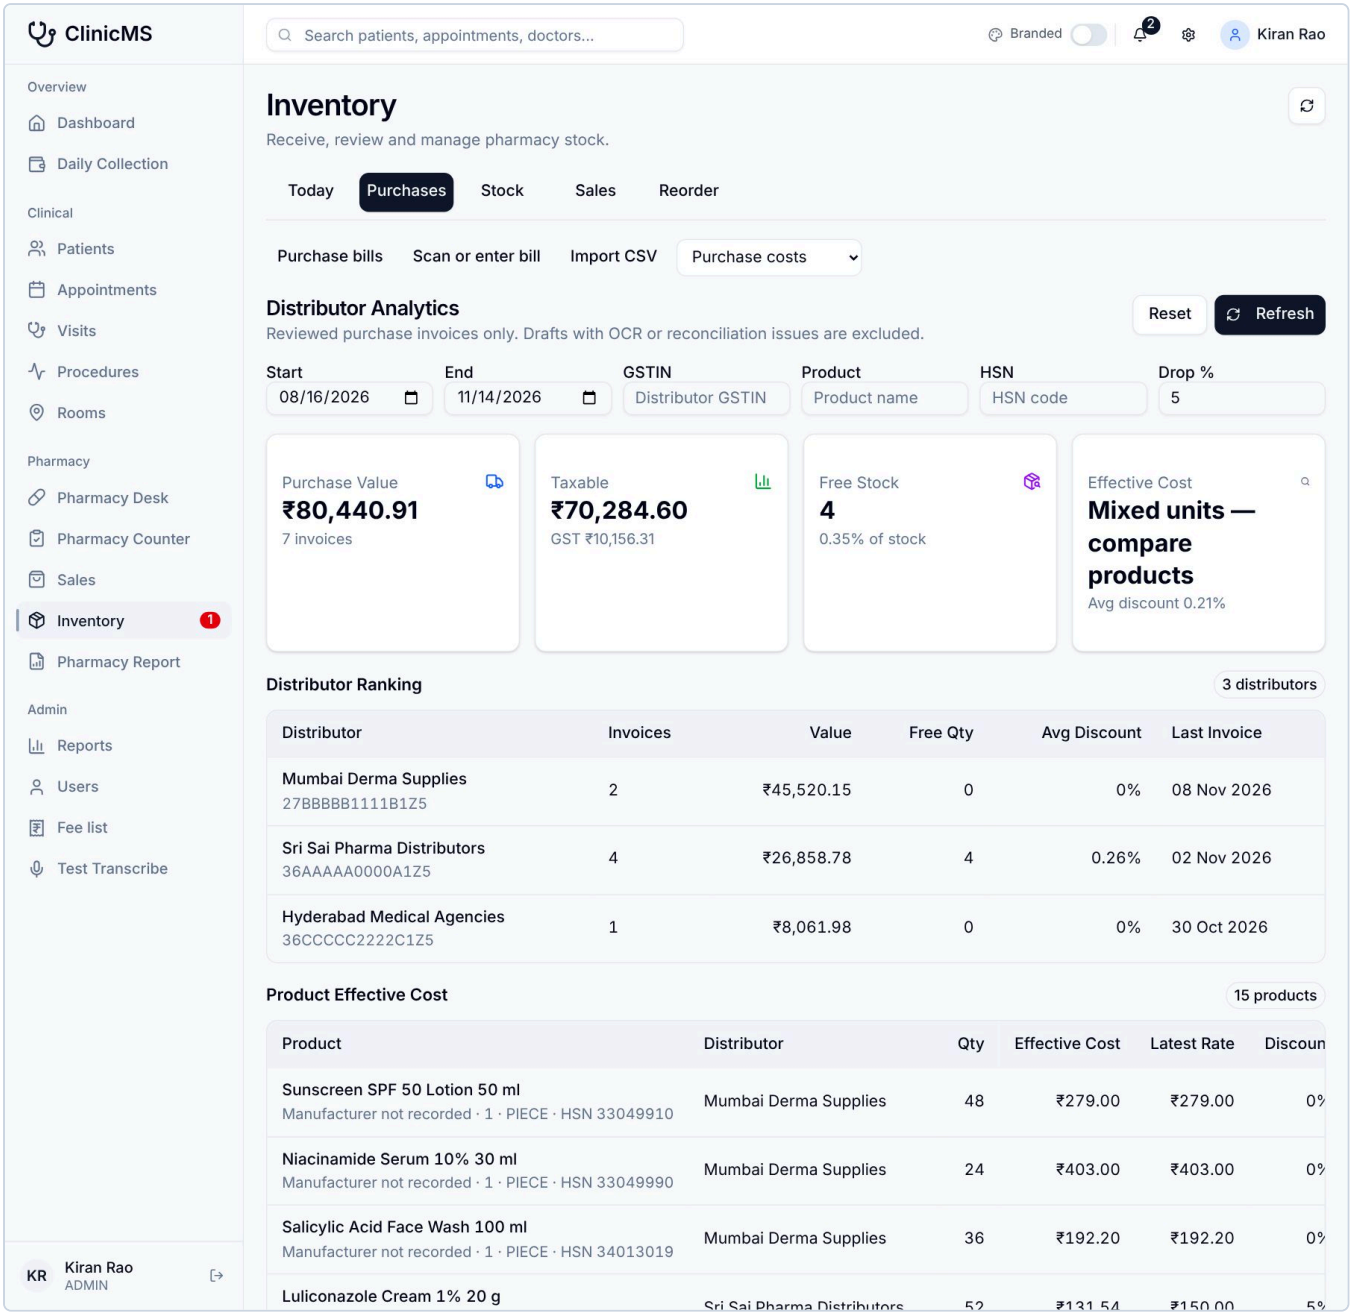

Figure 13.30. Purchase costs: totals for the period, the distributor ranking and the effective cost of each product.

CHAPTER 14

Inventory: reorder and sales

This chapter covers two areas of the **Inventory** page. **Reorder** is where the pharmacy decides what to buy: it lists what is running short (the shortbook), turns shortages into purchase orders, and keeps the minimum and maximum stock level of every medicine. **Sales** is where counter sales, quotations and customer returns are recorded against exact batches. Pharmacists do most of this work. Approving a purchase order or saving target levels is done by a manager (an admin or the owner).

14.1 How reordering works: minimum, maximum and reorder level

WHO USES THIS Pharmacists, admins

Every medicine can have three numbers, all counted in the medicine's own stock unit (for example tubes or tablets). They drive every screen in the **Reorder** area.

When a medicine's available stock falls to its minimum, it counts as a shortage. The shortbook (next section) lists it with the quantity needed to get back up to the maximum. For example, Clindamycin Gel has a minimum of 10 and a maximum of 60. If only 4 tubes are left, the shortbook asks for 56.

The app does not buy anything on its own. Each step produces a draft, and a person checks it before any order is sent: the shortbook makes draft requests, a pharmacist turns a request into a purchase order, and a manager approves it. Target proposals work the same way. The app looks at what the pharmacy sold in the last weeks and suggests new minimum and maximum levels. A manager accepts or rejects each suggestion.

The **Reorder** area has six views. **Shortbook**, **Purchase orders** and **Target proposals** are always in the row. **Manual targets & exclusions**, **Automation settings** and **Monitor** are in the **More tasks…** list.

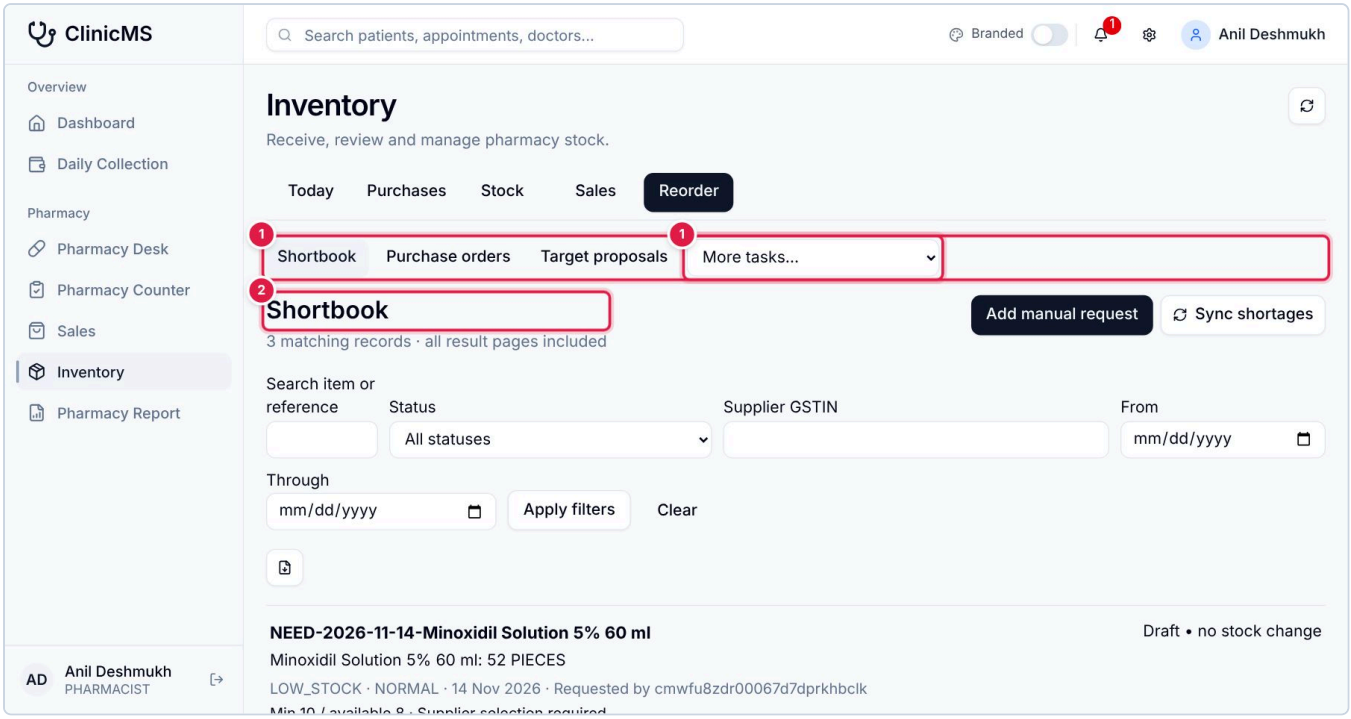

Figure 14.1. The Reorder area. (1) the six views: the first three are buttons and the rest are in More tasks. (2) the page title and what it lists.

TERM	WHAT IT MEANS
Minimum	The lowest stock you are happy to hold. At or below this number the medicine is a shortage.
Maximum	The most you want on the shelf. A shortage is topped up to this number.
Reorder level	The stock level at which the pharmacy should reorder. You can set it above the minimum to leave time for delivery. Leave it blank if you do not use it.
Available	Stock you can sell now, not counting blocked or expired batches.
Stock unit	The unit the three numbers are counted in, shown beside each medicine (for example PIECES).

14.2 Find what is running short with the shortbook

WHO USES THIS Pharmacists

The shortbook is the pharmacy's list of things to buy. Open **Reorder** and then **Shortbook**. Each row is one request: a medicine, the quantity needed, who asked and why.

Press **Sync shortages** to let the app fill the list for you. It checks every medicine against its minimum and adds a request for each one that is short. Requests you already have are kept, so pressing it again does not make duplicates. The reason on those rows reads LOW_STOCK. A medicine with no stock at all is marked URGENT. You can also add your own request with **Add manual request**, for example when a customer asks for something you do not stock.

Click a row to open the request. You choose the supplier, check the quantity and rate, then press **Create purchase order**. Creating the order does not add any stock. Stock only changes when the goods arrive.

1. Open **Inventory**, then **Reorder**, then **Shortbook**.
2. Click **Sync shortages**. A green line says *Shortbook refreshed from active targets*.
3. Read the rows. The grey line under each name shows the reason, the priority, the date and the minimum against what is available.
4. Click a row to open it.
5. Choose the supplier. The line already has the quantity the app worked out. Change it if needed.
6. Click **Save draft** to keep your work, or **Create purchase order** to move it on.

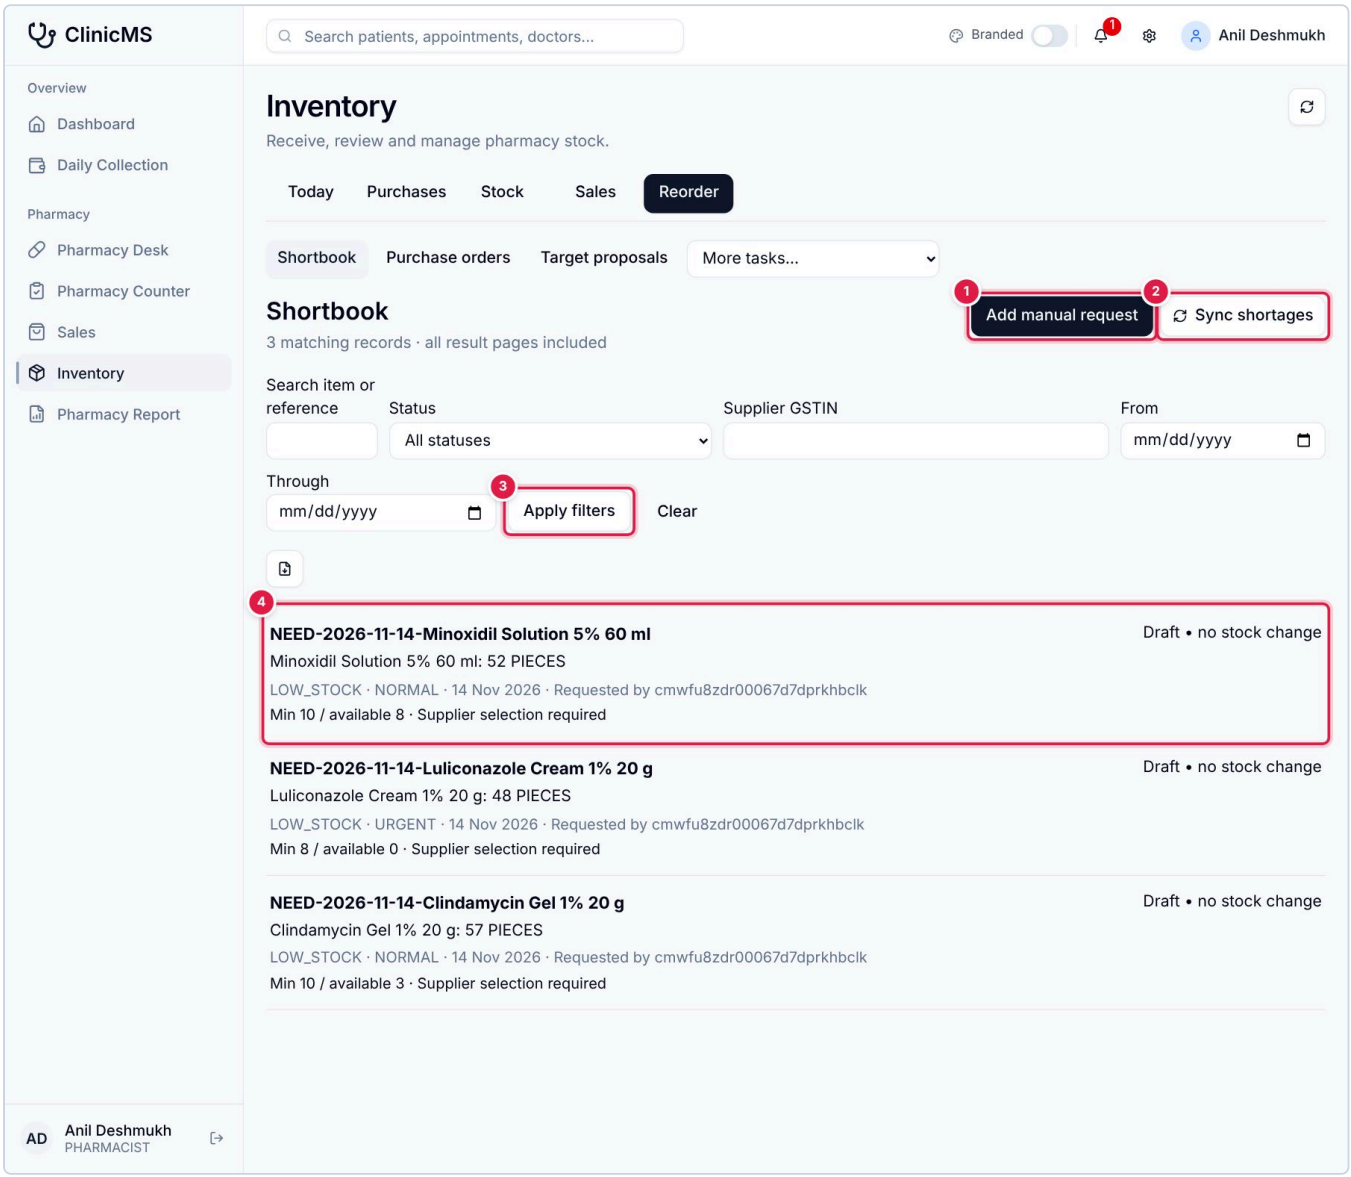

Figure 14.2. The shortbook after Sync shortages. (1) Add manual request, (2) Sync shortages, (3) filters, (4) a request: the medicine, the quantity to buy, the reason and its minimum against stock.

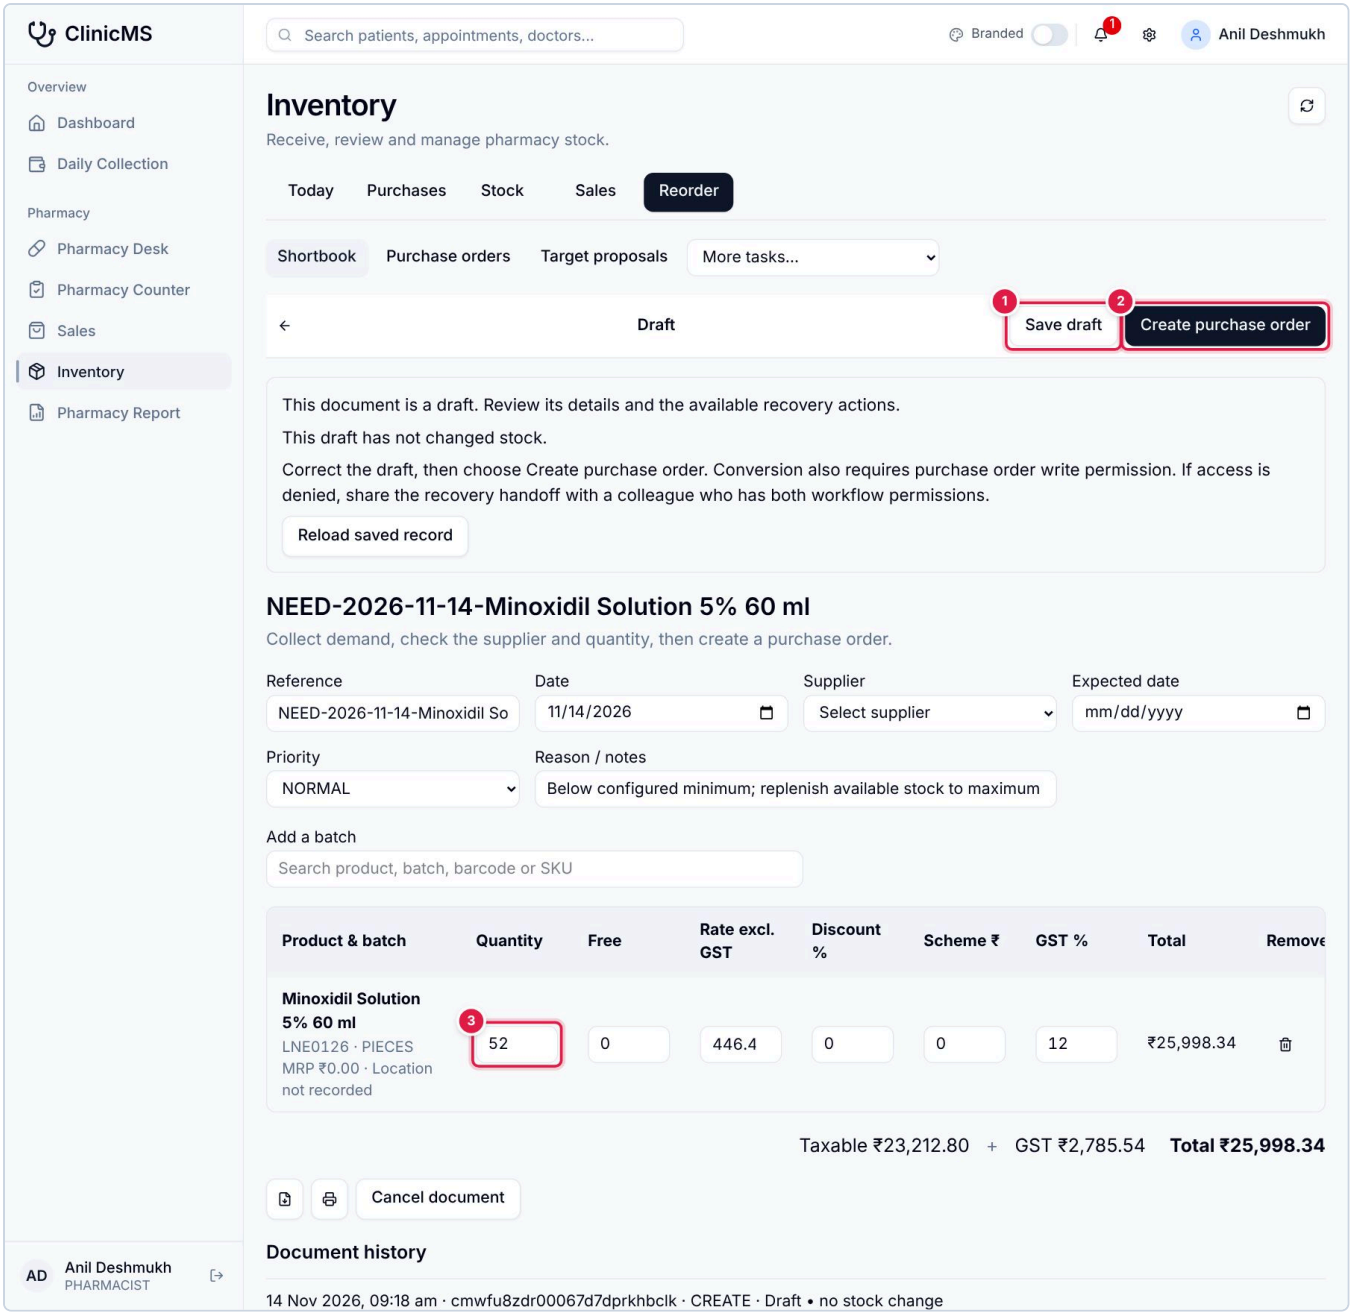

Figure 14.3. One shortbook request opened. The line already holds the quantity to buy. Choose a supplier, then Create purchase order.

CONTROL	WHAT IT DOES
Search item or reference	Finds requests by medicine name or reference number.
Status	Shows only requests in one state, such as Draft, Awaiting manager approval or Received in full. **OPEN** means anything not finished.
Supplier GSTIN	Shows only requests for one supplier, found by the supplier's GST number.
From, Through	Limit the list to a range of dates.
Apply filters, Clear	Apply what you typed, or remove all filters.

Download all matching lines	The small file button saves every line that matches the filters as a spreadsheet file, including lines on other pages.

> **TIP**
> The shortbook is a to-do list, not an order. Nothing is bought and no stock changes until a purchase order is approved and the goods are received.

14.3 Create and submit a purchase order

WHO USES THIS Pharmacists

A purchase order is your written request to a supplier: which batches, how many, at what rate. Use it when you know what to buy. It stays a draft, and changes no stock, until a manager approves it.

You can start an order from a shortbook request, or from **Reorder › Purchase orders › Add purchase order** as shown here.

1. Open **Reorder › Purchase orders** and click **Add purchase order**.
2. Check the **Reference**. The app suggests one. Change it if you use your own numbering.
3. Choose the **Supplier**, and an **Expected date** if you know when the goods should arrive.
4. Choose the **Priority**: Normal, High or Urgent.
5. Click the **Add a batch** box and type a medicine name, batch number, barcode or SKU. Click the batch in the list that appears.
6. Type the **Quantity**. Check the rate and GST. The line total and the order total update as you type.
7. Click **Save draft** to keep it without sending it on, or **Submit for approval** when it is ready.
8. After you submit, the page says *Awaiting manager approval* and the fields become read only.

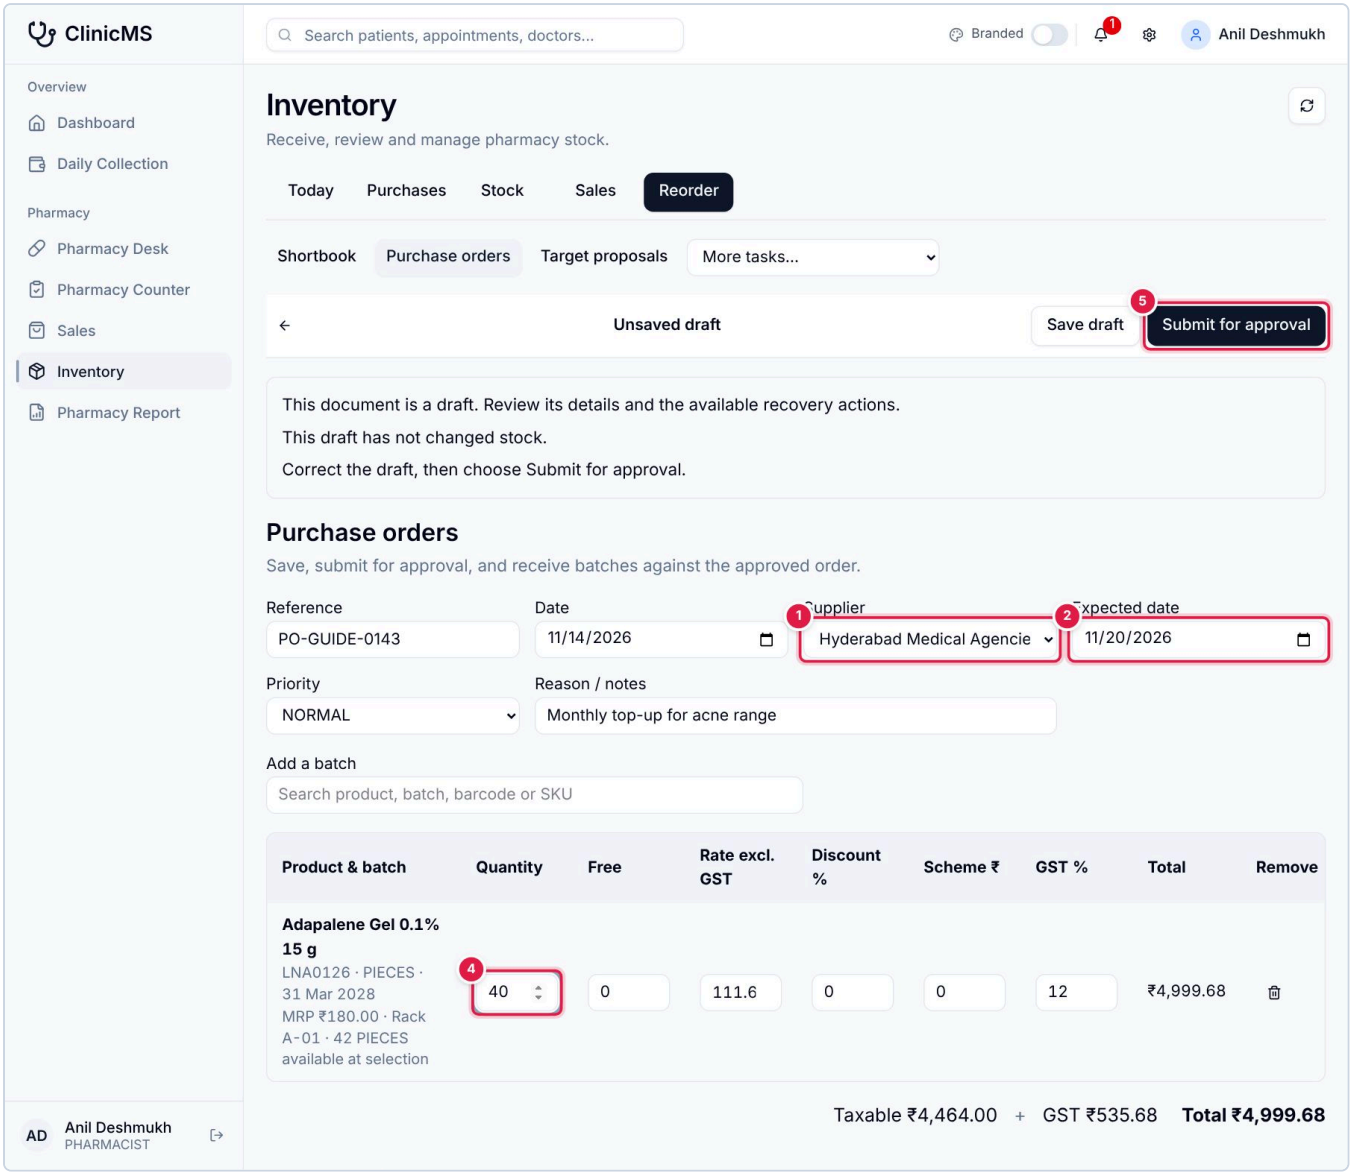

Figure 14.4. A purchase order filled in: (1) supplier, (2) expected date, (3) the batch added to the order, (4) the quantity to buy, (5) Save draft and Submit for approval.

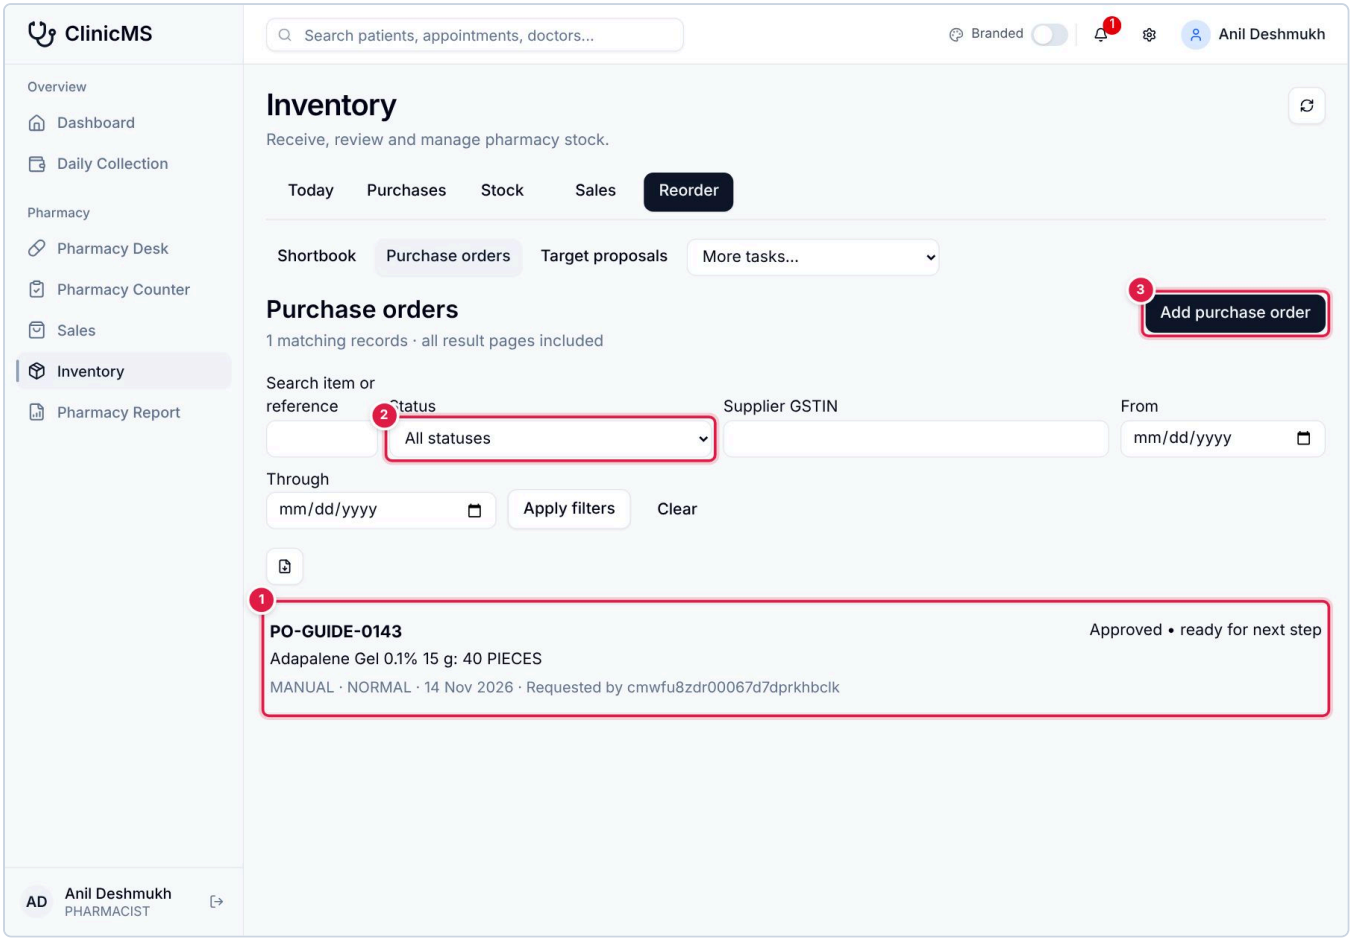

Figure 14.5. The Purchase orders list with the new order. (1) the order, its medicines, priority and status, (2) the status filter, (3) Add purchase order.

FIELD	MEANING
Reference	The order number. It must be unique.
Priority	Normal, High or Urgent. It tells the approver how fast you need it.
Quantity	Units to buy, in the stock unit.
Free	Free units the supplier adds under a scheme. Paid and free units together count towards what you ordered.
Rate excl. GST	The price per unit before tax.
Discount %, Scheme ₹	Percentage discount and a flat scheme amount taken off the line.
GST %	Tax rate for the line.
Remove	The bin icon takes the line off the order.

TAKE CARE

Submitting an order does not buy anything from the supplier. Nothing is sent until the order is approved and you choose to send it.

14.4 Approve, send and receive a purchase order

WHO USES THIS Admins and owners approve. Pharmacists send and receive.

A manager other than the person who wrote the order opens it and chooses **Approve document** or **Reject proposal**. Approving still does not change stock. The document history at the bottom of the page records who did what and when.

Once approved, two buttons appear. **Send purchase order** tries to email the order to the supplier. If email is not set up for the clinic, the page says *Supplier mail transport is not configured. Export the order and deliver it manually.* In that case use the **Export order & remaining quantities** button and send the file yourself. Each attempt is written in the document history.

When the goods arrive, click **Receive remaining stock**. This opens a receipt in the **Purchases** area (an inward challan) already filled with the lines still to come. Check the batch number, expiry date and quantity against the delivery, then click **Receive stock**. The stock goes up only at that point. If only part of the order arrives, receive that part. The order then shows **Part received** and keeps the rest open.

1. Sign in as a manager and open **Reorder › Purchase orders**.
2. Click the order that is *Awaiting manager approval*.
3. Check the lines and the total, then click **Approve document**.
4. Click **Send purchase order**, or export the order and send it yourself.
5. When the delivery arrives, open the order and click **Receive remaining stock**.
6. Check each line against the delivery note. Enter the real batch and expiry. Click **Receive stock**.

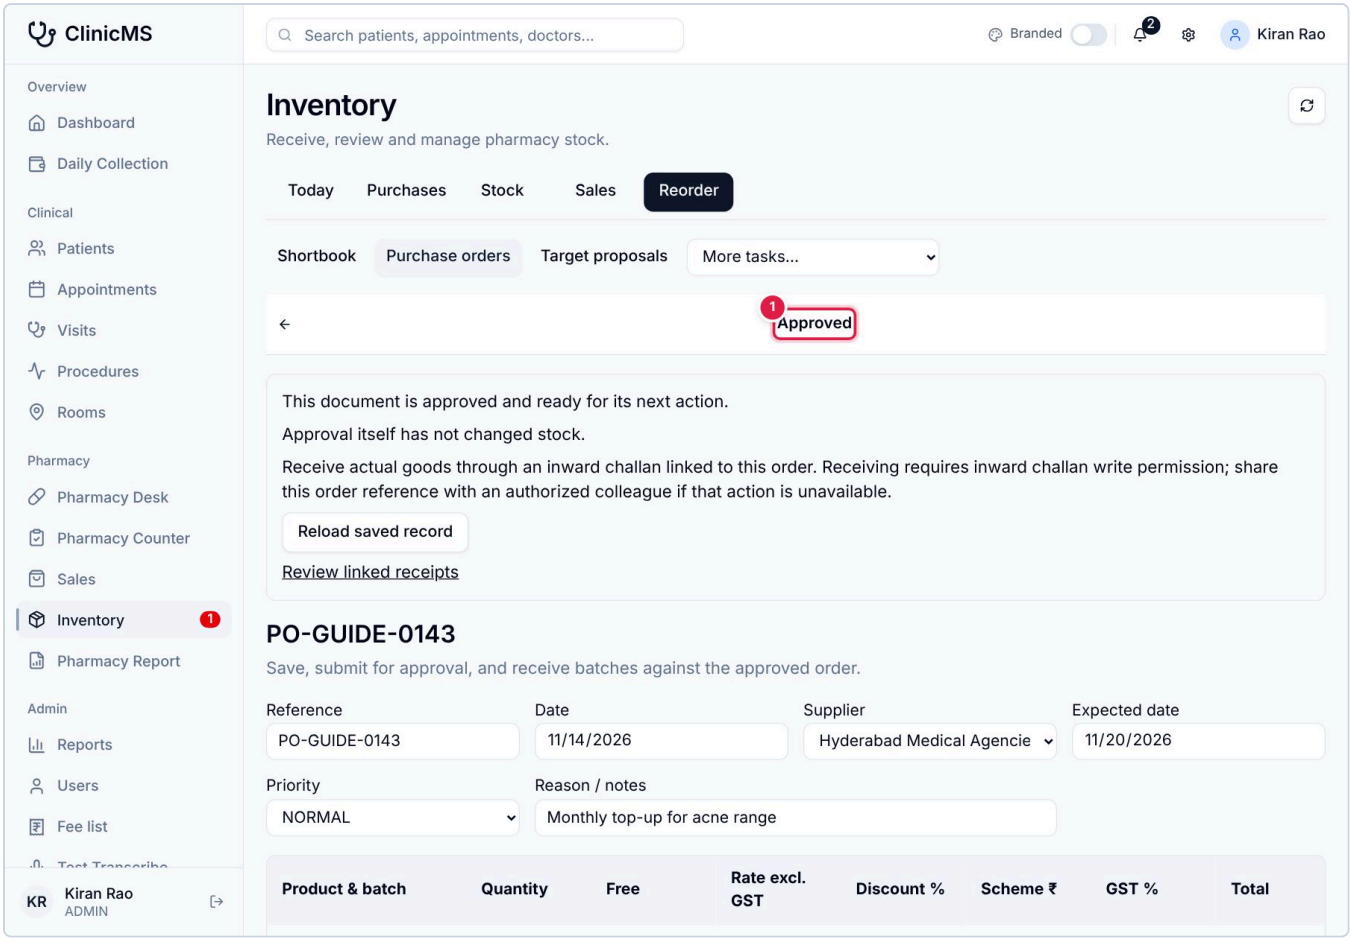

Figure 14.6. A manager opens the order. (1) the status, (2) Approve document, (3) Reject proposal.

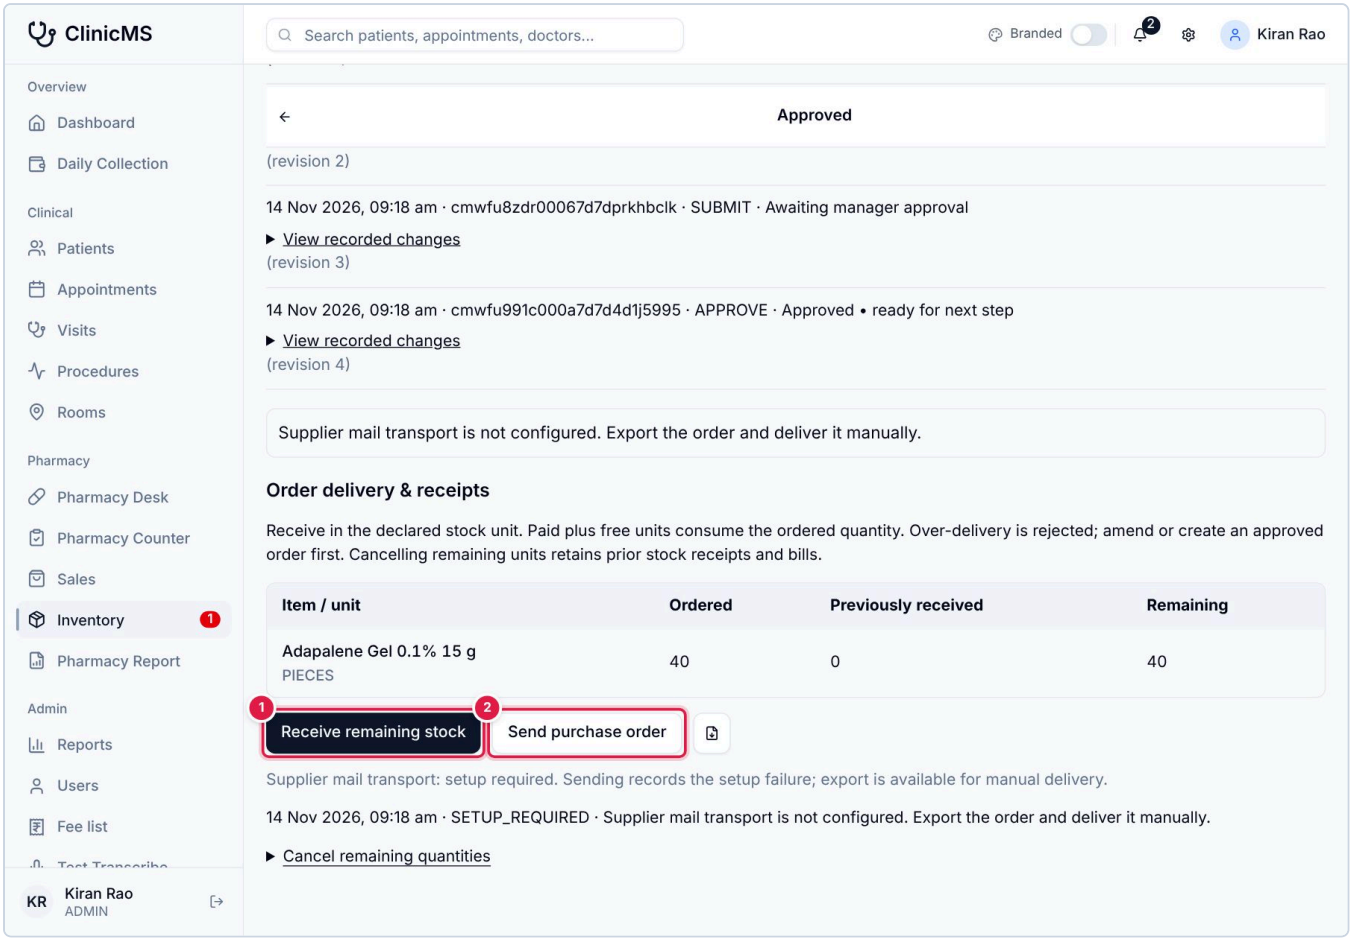

Figure 14.7. After Approve document. (1) Receive remaining stock, (2) Send purchase order. Without supplier email set up the page says so, and the order is exported by hand.

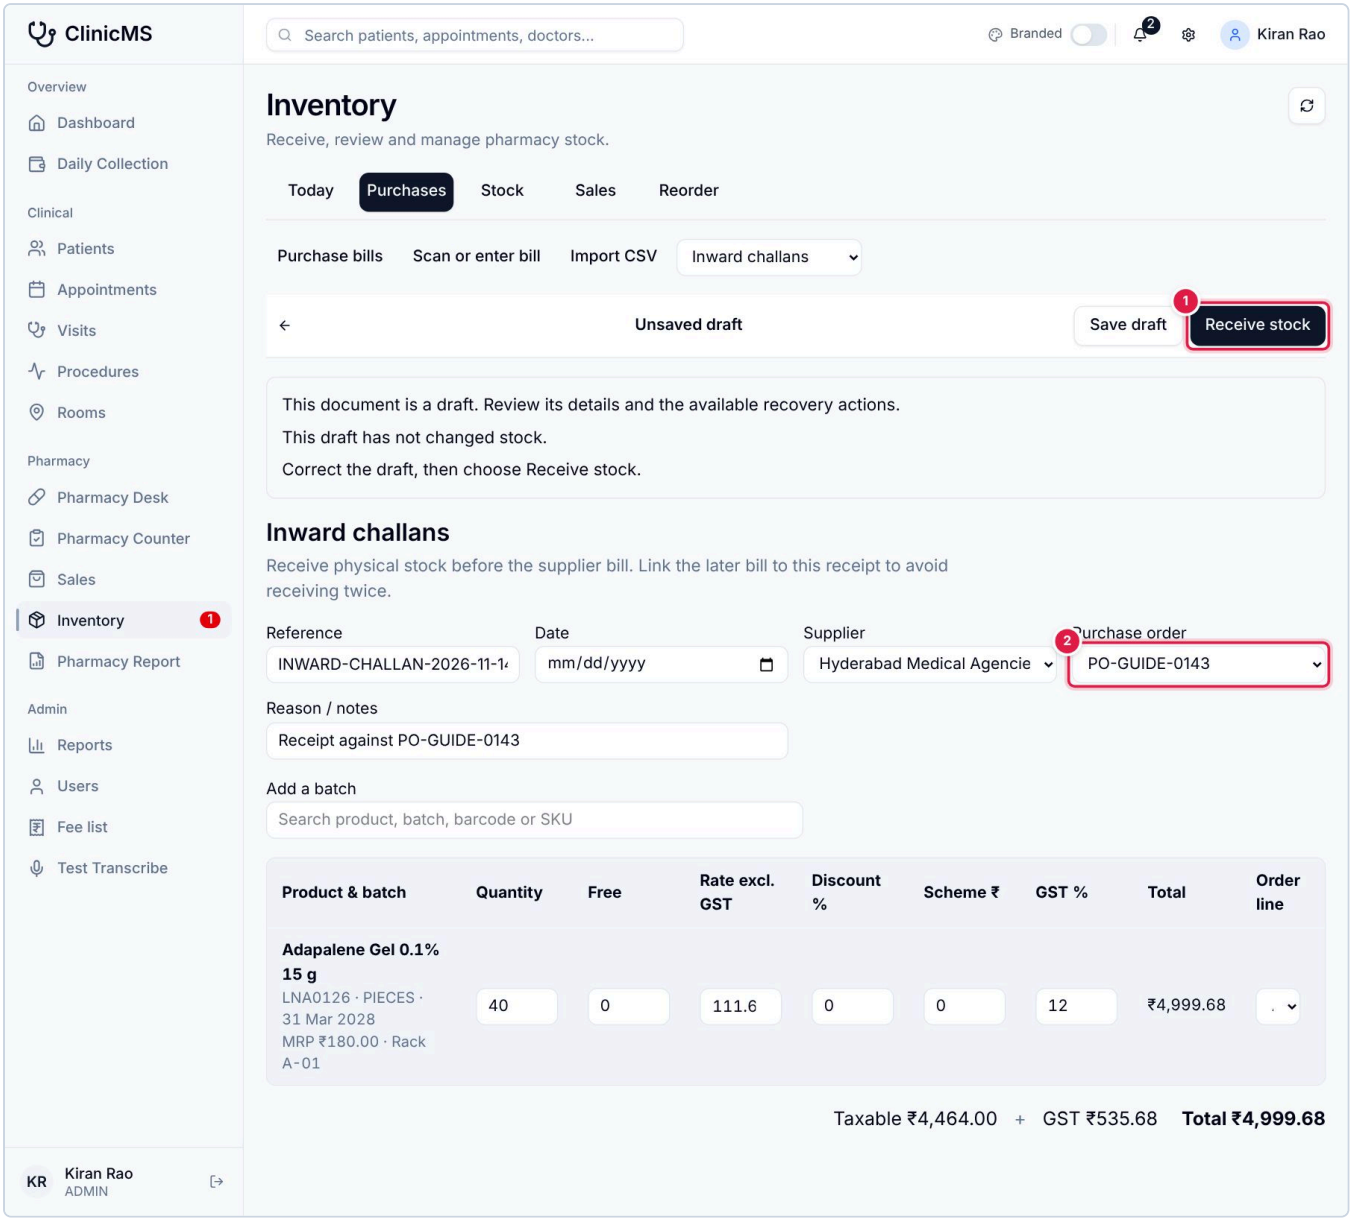

Figure 14.8. Receive remaining stock opens a receipt in the Purchases area, already linked to the order and filled with the quantities still to come. Stock only rises when you click Receive stock.

STATUS OR BUTTON	MEANING
Draft	Being written. No stock change.
Awaiting manager approval	Submitted. A manager must approve or reject it.
Approved	Ready to send to the supplier and to receive against.
Recorded as sent	The order was sent to the supplier.
Partly reviewed, Part received	Some of the goods have arrived. The rest is still open.
Received in full	Everything arrived. The order is finished.
Cancelled, Rejected	The order was stopped. It cannot be received.

Cancel document	Stops an order that is not wanted any more. Use **Cancel remaining quantities** to close the part that will never arrive.
Print QR label, Export lines	Print a label for the document, or save its lines as a spreadsheet file.

> **TAKE CARE**
> Click **Receive stock** only when the goods are in your hands. It adds the batches to your stock and cannot be undone. A wrong receipt is fixed with a correction, not by deleting it.

14.5 Review target proposals

WHO USES THIS Admins and owners

Target proposals suggest new minimum and maximum levels from what the pharmacy actually sold. The app counts the units that left the shelf on posted counter sales over a set number of days. It can also count quotations for medicines you did not have and planned refills. It then works out how many days of stock each medicine has and proposes levels that cover the days set in **Automation settings**. A proposal is a draft. Nothing changes until you accept a line.

Press **Generate target proposal** to make today's proposal. Click it in the list to open it. Each medicine shows its saved minimum and maximum, then an arrow and the proposed levels, with the evidence underneath: available stock, units sold, bounced (wanted but not in stock) and refill quotations, and the number of purchase orders.

When a medicine has no recent sales, the app writes *Cold start: retain saved targets* and proposes the same levels it already has. This is normal for a new clinic. After a few weeks of sales the proposals start to differ.

Medicines that you protected or excluded under **Manual targets & exclusions** are left alone.

1. Open **Reorder › Target proposals** and click **Generate target proposal**.
2. Click the proposal that appears in the list.
3. Read each medicine. Tick the ones you agree with, or click **Select unreviewed** to tick them all.
4. Click **Accept selected** to save the proposed levels, or **Reject selected** to keep the old ones.
5. Click **Back to list** when you are done.

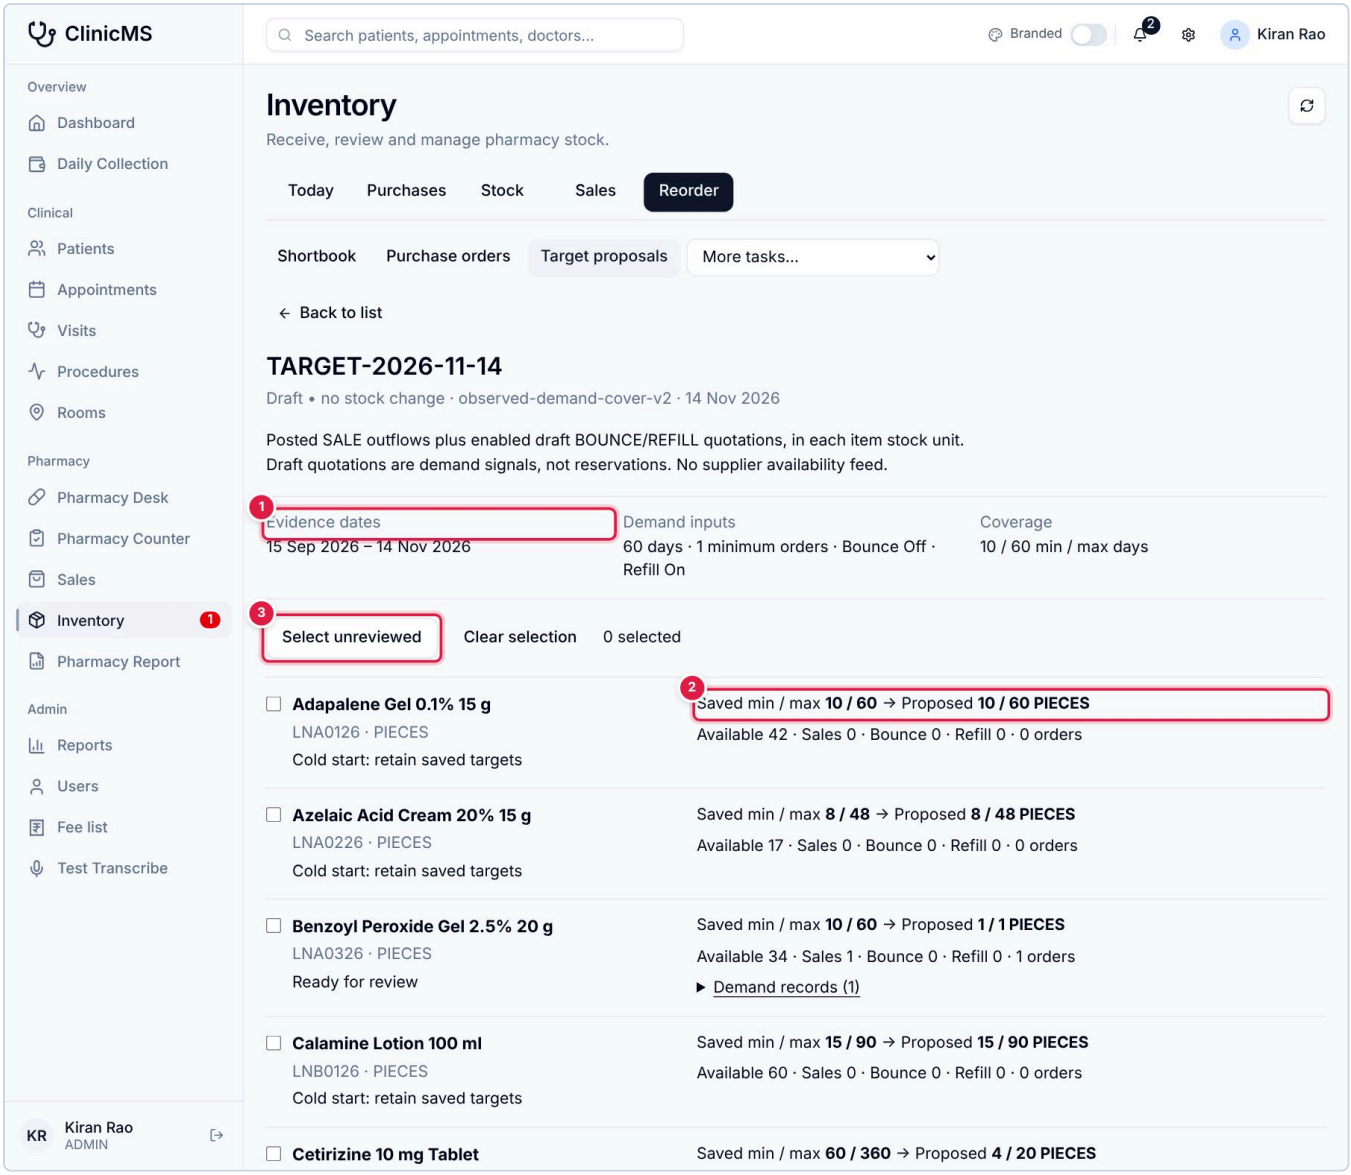

Figure 14.9. A target proposal opened. (1) what the app looked at, (2) the saved and proposed levels with the evidence for one medicine, (3) select and decide buttons.

ON SCREEN	MEANING
Evidence dates	The days of sales the proposal looked at.
Demand inputs	How many days of history it used, the smallest number of orders it needs before it trusts the data, and whether bounced and refill quotations count.
Coverage	The number of days of stock the minimum and maximum should cover.
Saved min / max → Proposed	What you have now, and what the app suggests.
Sales, Bounce, Refill, orders	The evidence: units sold, units wanted but not in stock, planned refills and purchase orders in the period.
Select unreviewed, Clear selection	Tick every line you have not decided on yet, or untick all.

Accept selected, Reject selected	Apply the decision to all ticked lines.

14.6 Set minimum, maximum and reorder level by hand

WHO USES THIS Admins and owners. Pharmacists can look.

Manual targets & exclusions is the page where you type the three levels yourself. Use it for a new medicine, a seasonal one, or any time you know better than the app. It lists every active medicine with its saved numbers and its available stock.

Changes are made in three steps so a slip does not reach the shelf: tick the medicines, edit the numbers, then click **Review selected changes**. The review shows the old and new numbers side by side. You must give a reason, and the whole selection is saved together with a record of the old values. Stock quantities and purchase prices are not touched.

Two tick boxes at the right of each row control automation. **Protect manual targets** stops target proposals from overwriting the numbers you typed. **Exclude from target proposals** leaves the medicine out of proposals completely. Saved levels still count for shortages in both cases.

1. Open **Reorder**, then **More tasks...**, then **Manual targets & exclusions**.
2. Type part of a name in **Search item or reference** and click **Apply filters** to narrow the list. Click **Clear** to see everything again.
3. Tick the medicine, or click **Select all matching items** to tick every row in the list. **Clear selection** unticks them.
4. Type the new **Minimum**, **Maximum** and **Reorder level**. Leave a box blank to leave it unconfigured.
5. Tick **Protect manual targets** or **Exclude from target proposals** if you want.
6. Click **Review selected changes**. Read the old and new numbers.
7. Type the **Reason**, then click **Save reviewed targets**. Click **Back to editing** to change something first.

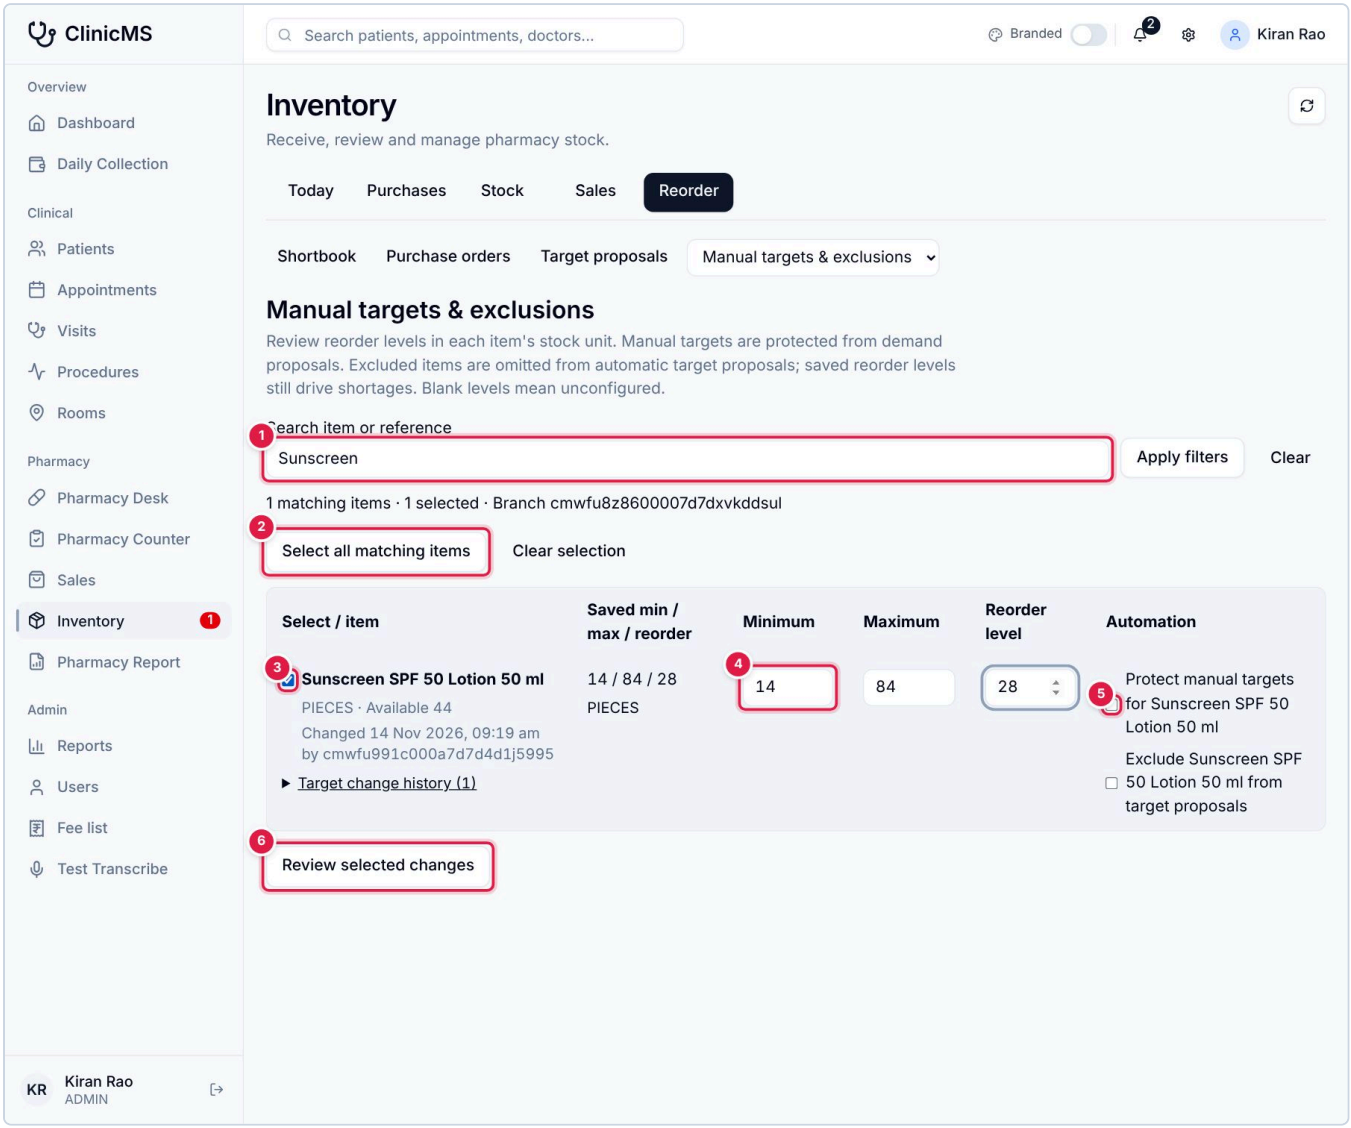

Figure 14.10. Manual targets. (1) search, (2) Select all matching items, (3) the ticked medicine, (4) new minimum, maximum and reorder level, (5) the automation tick boxes, (6) Review selected changes.

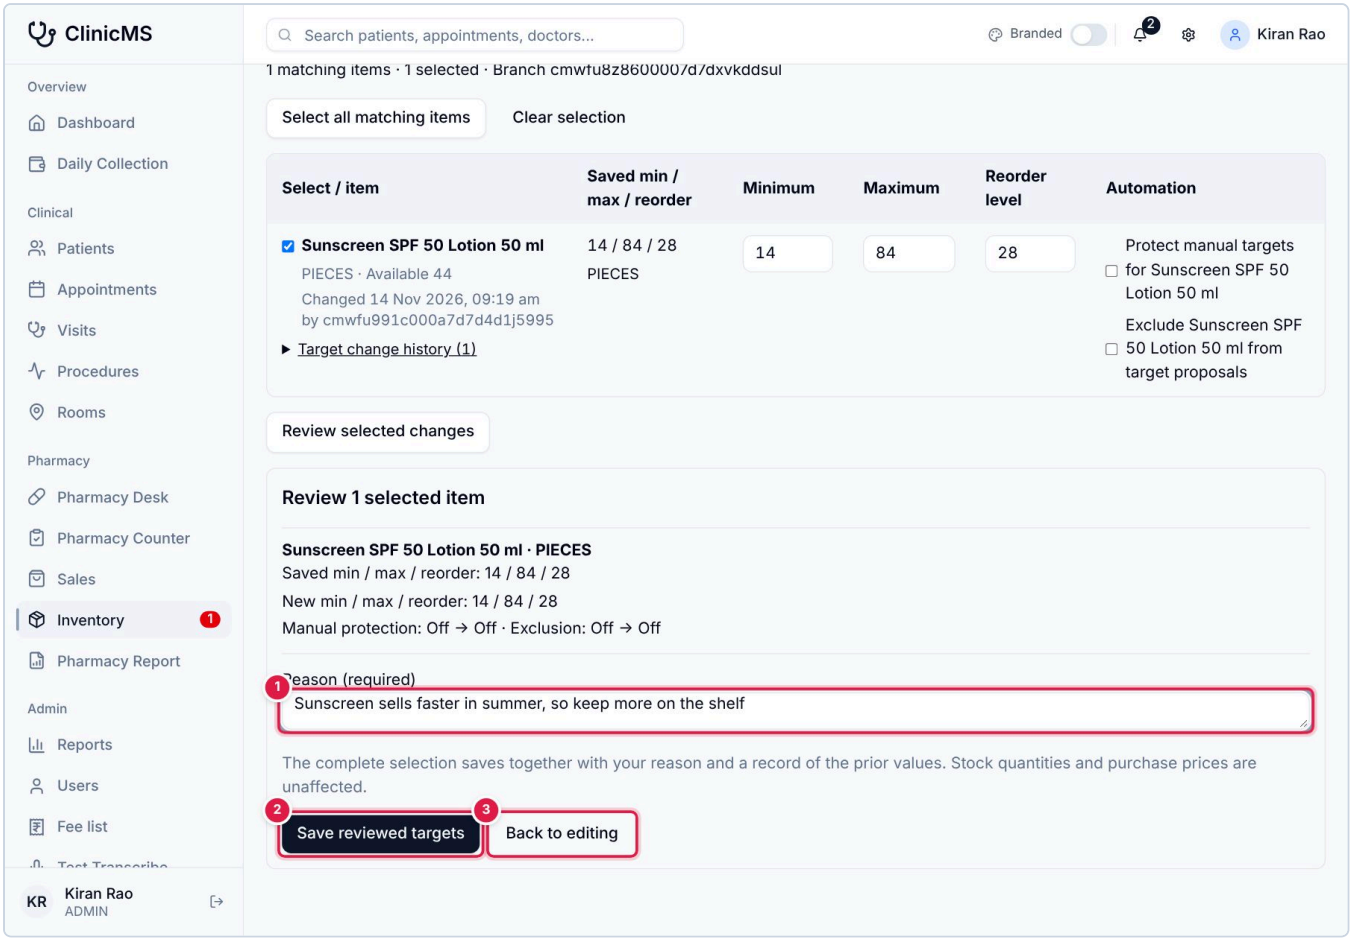

Figure 14.11. Review selected changes: the old and new numbers, a reason box and the Save reviewed targets button. Nothing is saved until you click it.

COLUMN OR BOX	MEANING
Select / item	The tick box and the medicine, with its stock unit and available stock.
Saved min / max / reorder	The three numbers saved now.
Minimum, Maximum, Reorder level	Boxes for the new numbers.
Protect manual targets	Proposals will not change your numbers.
Exclude from target proposals	The medicine is left out of proposals.
Reason	Required. Kept with the record of the change.

> **TIP**
> After you save, the shortbook uses the new levels the next time you press **Sync shortages**.

14.7 Automation settings and the monitor

WHO USES THIS Admins and owners

Automation settings decides how the app proposes targets and drafts orders by itself. Automation only makes drafts for a manager to approve. Sending an order always needs a person. Until an automation owner is chosen the page shows *Setup required*.

Choose an **Automation owner**: the person the drafts are made in the name of. Turn on **Automatic target proposals** and **Automatic PO drafts** if you want them. Open **How demand is calculated** for a short explanation. Click **Save settings**, and **Run saved settings** to try it at once. Each run is listed under **Saved run outcomes**.

Monitor is a report on how reordering is going. Choose a **From** and **Through** date and click **Apply filters**. The counts show how many orders were created, approved, sent, failed, part received and received. Below them, **Demand & stock coverage** lists each medicine in the latest proposal with the stock available, the units sold per day and the days of cover. Click **Review proposal** on a row to open the evidence. **Supplier choices** shows which suppliers your orders went to.

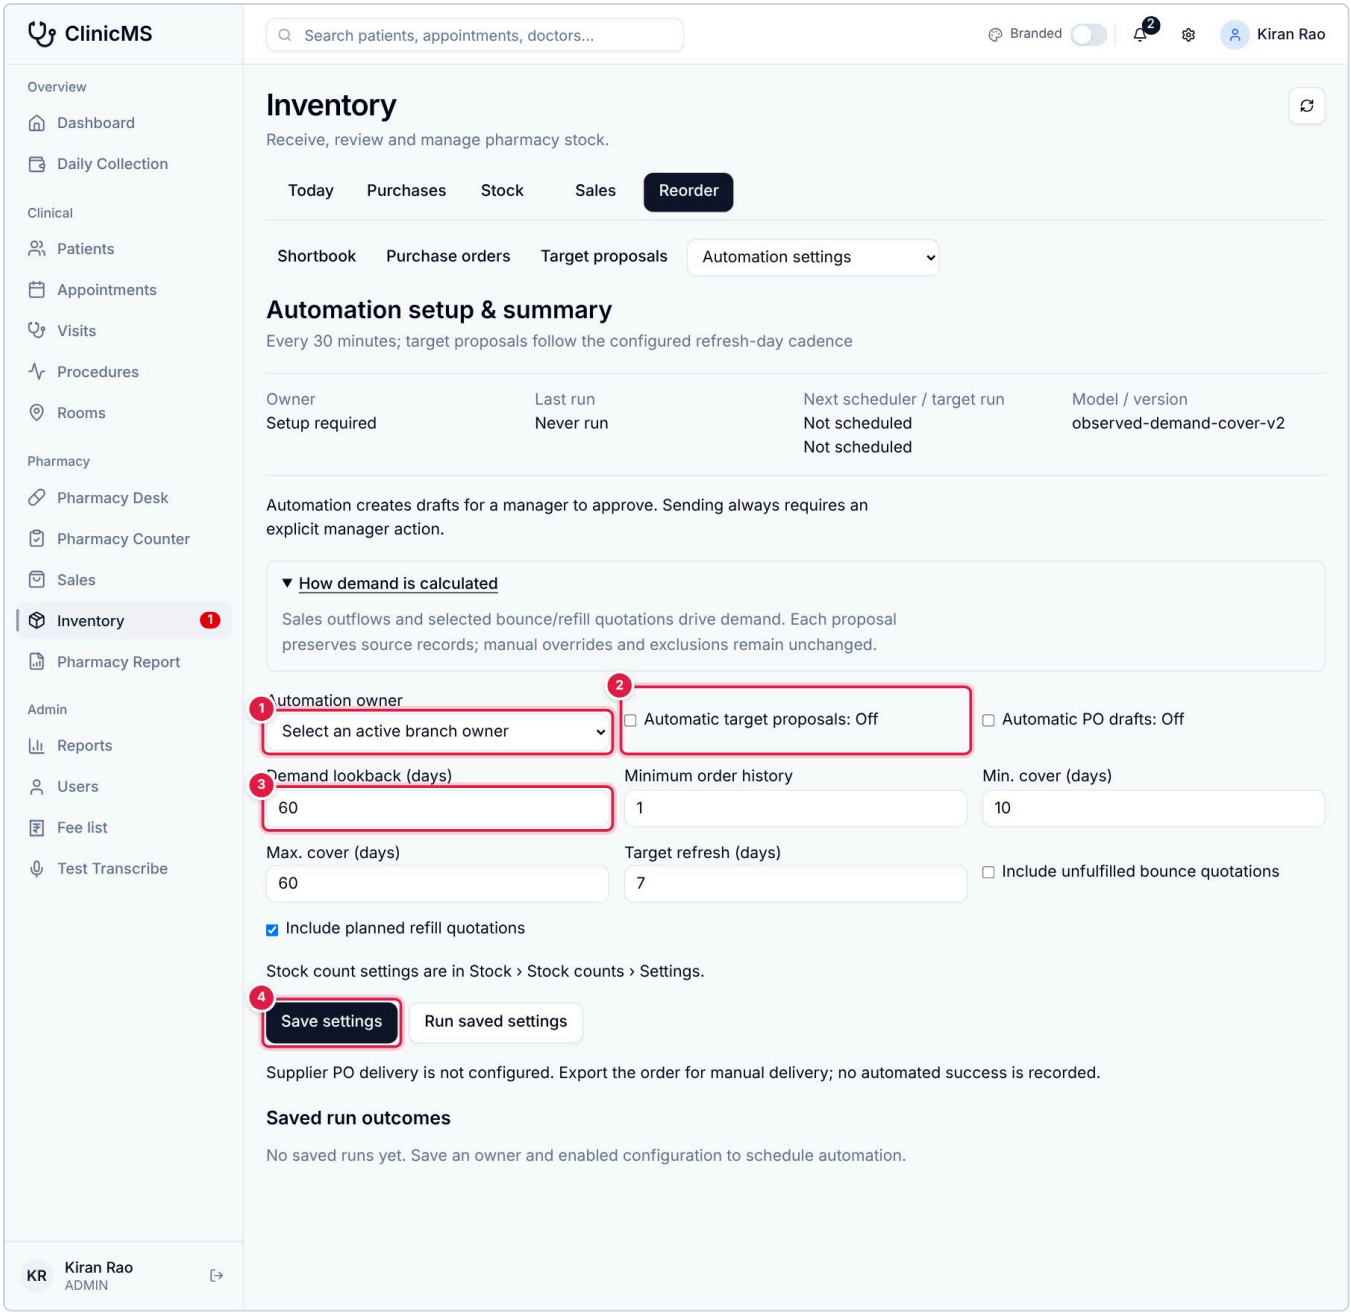

Figure 14.12. Automation setup. (1) who owns the automation and what it has done, (2) the two switches, (3) the demand settings, (4) Save settings and Run saved settings.

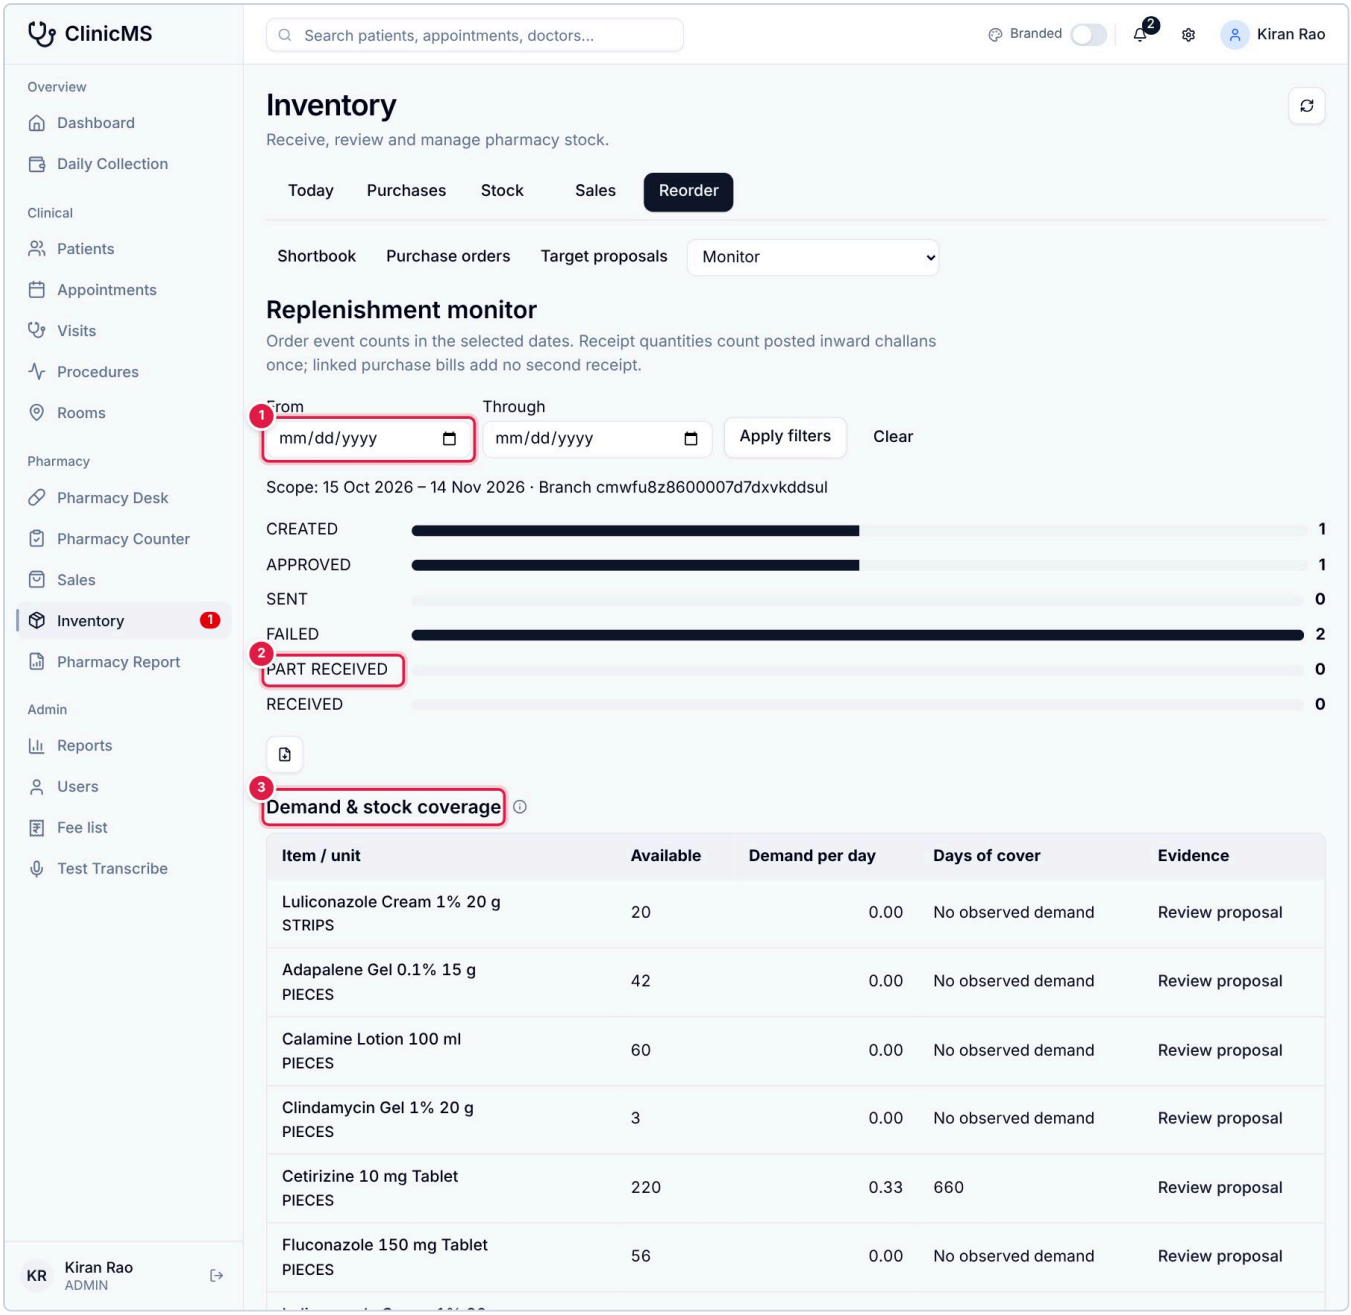

Figure 14.13. The monitor. (1) the date range, (2) counts of orders by outcome, (3) demand and stock coverage for each medicine.

SETTING OR FIGURE	MEANING
Demand lookback (days)	How many days of sales to look at.
Minimum order history	How many past orders a medicine needs before its sales count as a pattern.
Min. cover (days), Max. cover (days)	How many days of stock the minimum and maximum should cover.
Target refresh (days)	How often a new proposal is made.
Include unfulfilled bounce quotations	Count customers who asked for a medicine you did not have.

Include planned refill quotations	Count refills planned for patients.
FAILED (monitor)	Attempts to send an order that did not go through, for example because supplier email is not set up.
Days of cover	Available stock divided by units sold per day. *No observed demand* means nothing sold in the period.

14.8 Record a counter sale

WHO USES THIS Pharmacists

The **Sales** area of Inventory records sales from exact batches of stock, one document per sale. It has four views: **Counter sales**, **Quotations**, **Customer returns** and, in **More tasks…**, **Patient invoice history**.

A counter sale is for someone who walks up and buys medicines without a prescription bill, for example a skin cream or sunscreen. You pick the batch, so the right expiry and price are used. A draft does not hold any stock. Stock goes down when you click **Post sale**.

The sale then shows *Confirmed stock effects* (the units taken off the shelf) and a history of who saved and posted it. Posted sales also appear in the **Sales** item of the main menu.

1. Open **Inventory › Sales › Counter sales** and click **New document**.
2. Type the customer's name and phone number if you want them on the bill. Leave them blank for a walk-in customer.
3. Choose the **Payment method**: Cash, UPI, Card or Credit.
4. Choose the **Doctor** if a doctor advised it, and the **Order type**: Pickup, Delivery or In clinic.
5. Click **Add a batch**, type the medicine, and click the batch you are handing over. The app shows the batch number, expiry date and rack.
6. Type the **Quantity**. Check the rate, discount and GST. The total updates.
7. Click **Post sale**. The page now shows *Posted* and the stock effect.

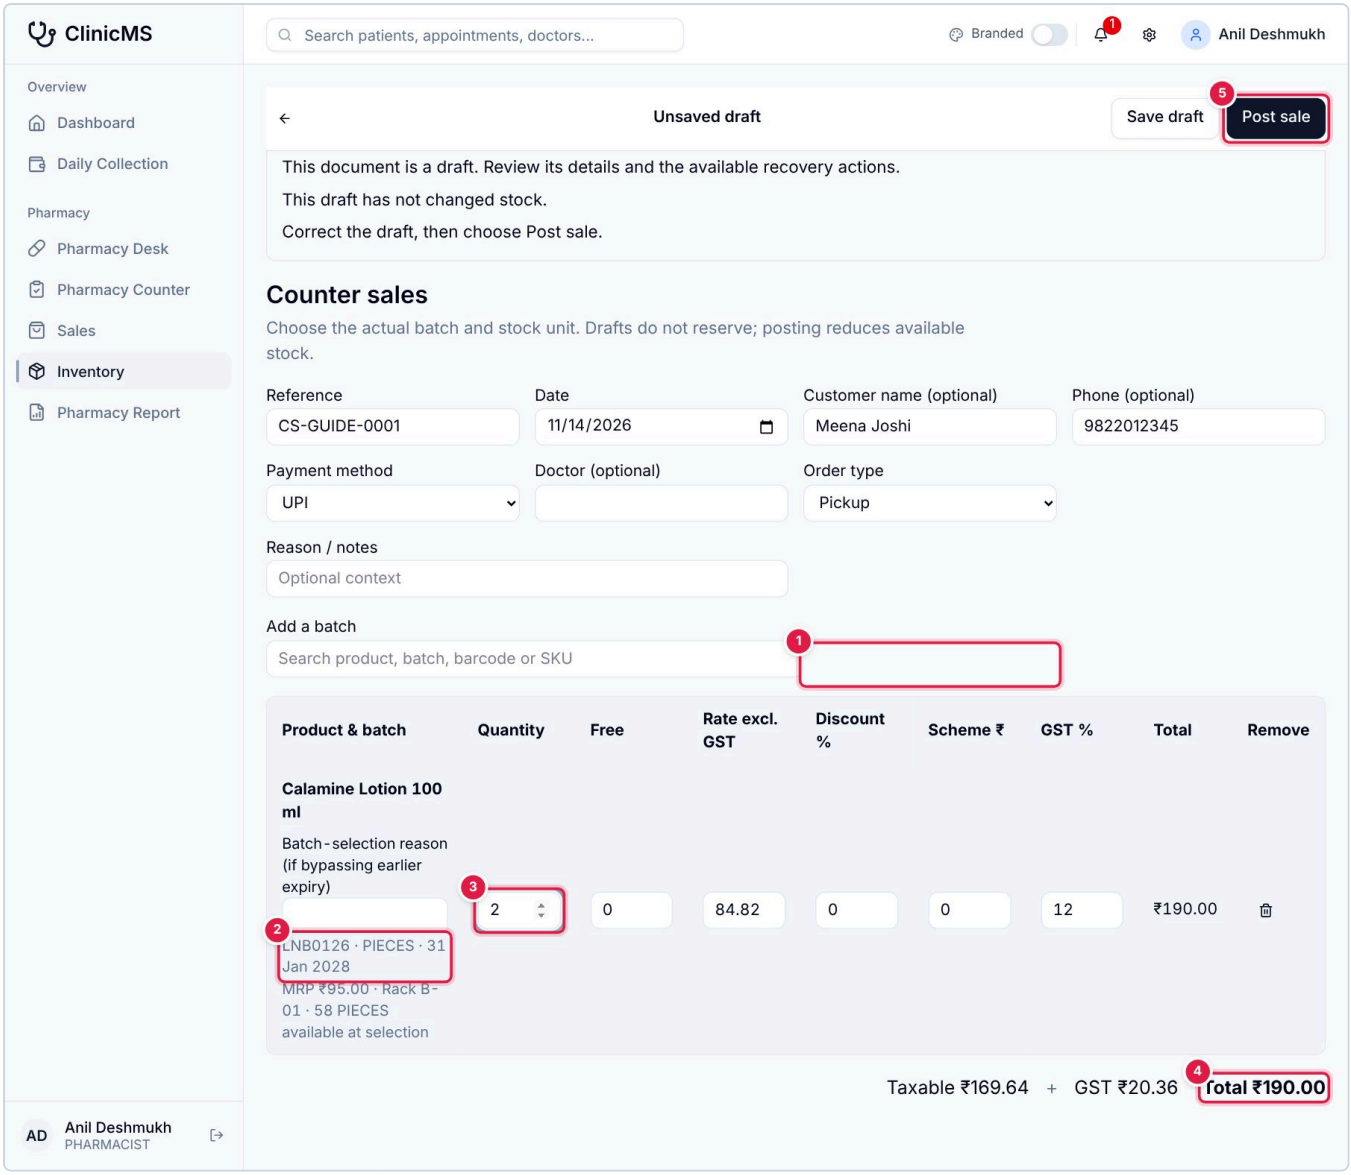

Figure 14.14. A counter sale ready to post. (1) customer and payment, (2) the batch and its expiry, (3) quantity, (4) the total, (5) Post sale.

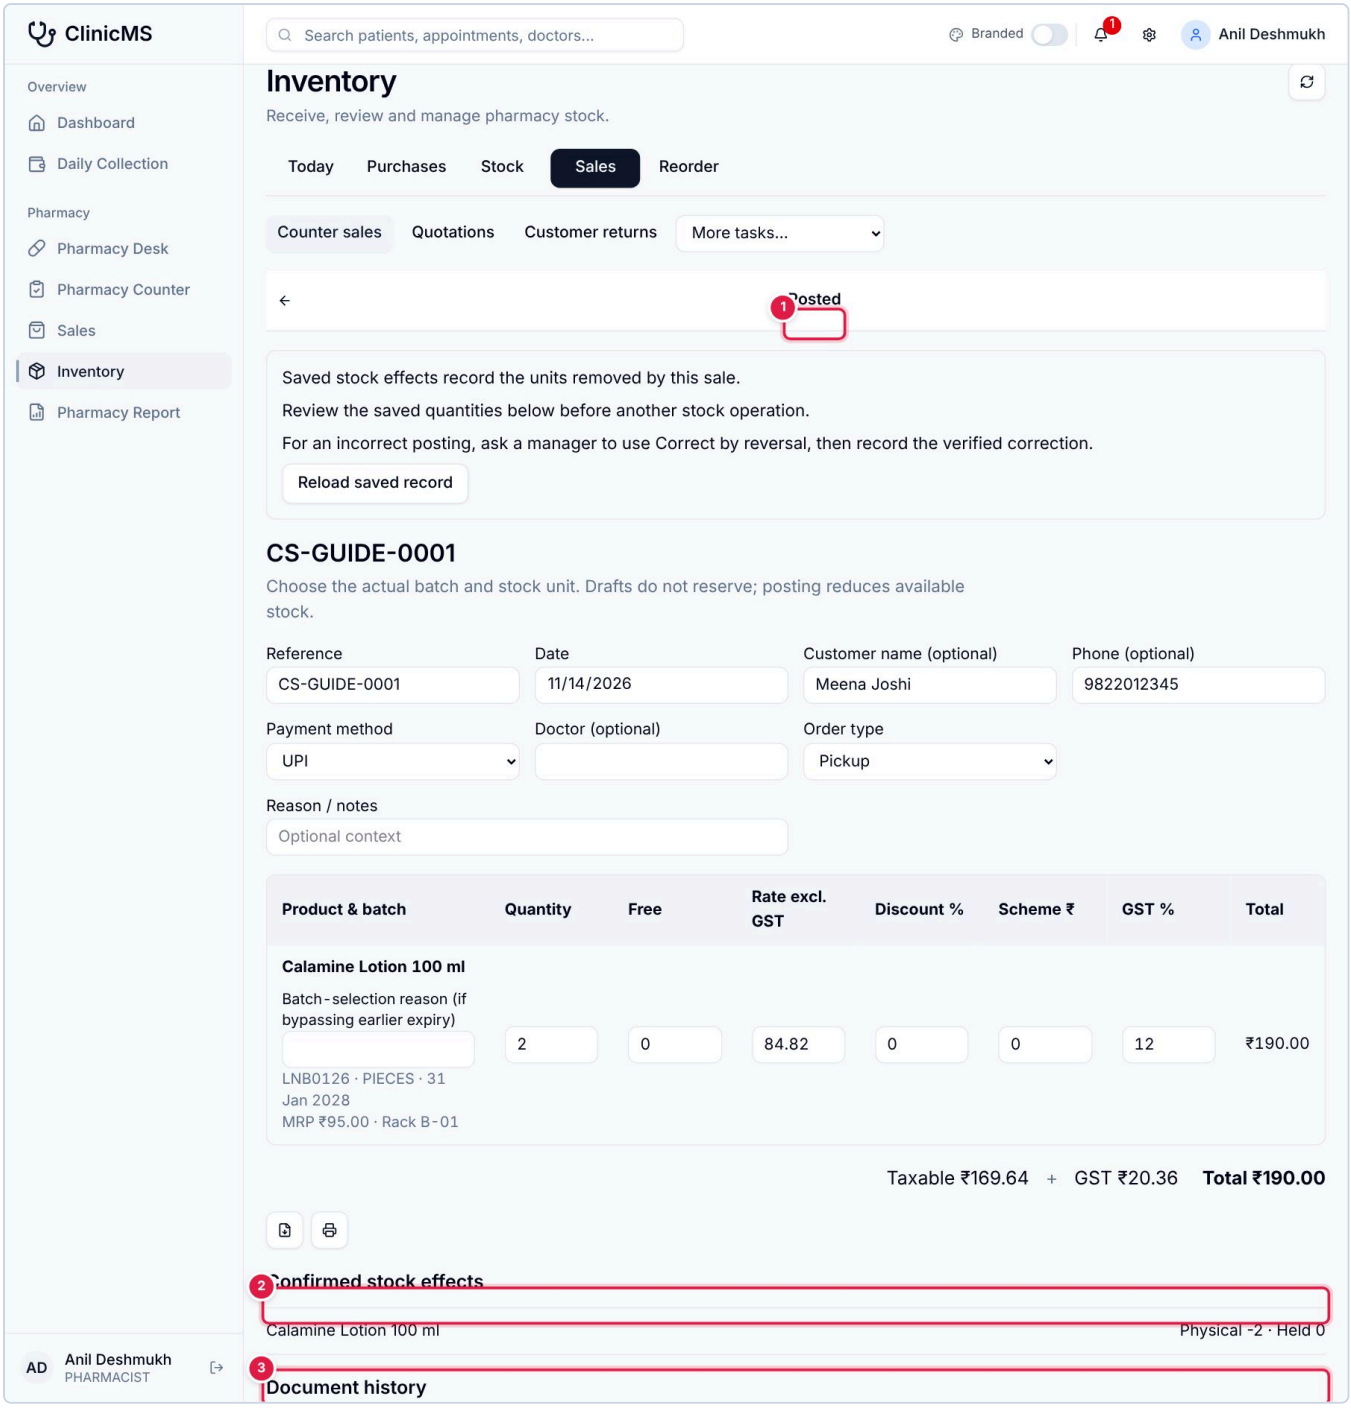

Figure 14.15. The posted sale. (1) the status, (2) Confirmed stock effects: two units left the shelf, (3) the history of who saved and posted it.

FIELD	MEANING
Counter sales list	Past sales. Filter by **Status**, **Reference** and a date range. **Previous** and **Next** move between pages.
Reference	The sale number.
Payment method	Cash, UPI, Card or Credit.
Order type	Pickup, Delivery or In clinic.

Batch-selection reason	Asked when you choose a batch that expires later than an older batch on the shelf. Write why.
Post sale	Saves the sale and reduces stock.

14.9 Take a customer return

WHO USES THIS Pharmacists

Use **Customer returns** when a customer brings back something you sold. The return is tied to the original sale, so the app knows the batch, the price and how many are left that can still be returned. You decide what happens to each returned item.

A return needs a reason before it can be posted.

1. Open **Inventory › Sales › Customer returns** and click **New document**.
2. Type the sale's reference in **Search original sale**.
3. Under **Add from original sale**, choose the sold batch. It shows how many can still be returned.
4. Check the **Quantity** being returned.
5. In **Disposition** choose what happens to the goods.
6. Choose the **Refund method** and write the **Reason / notes**.
7. Click **Post return**.

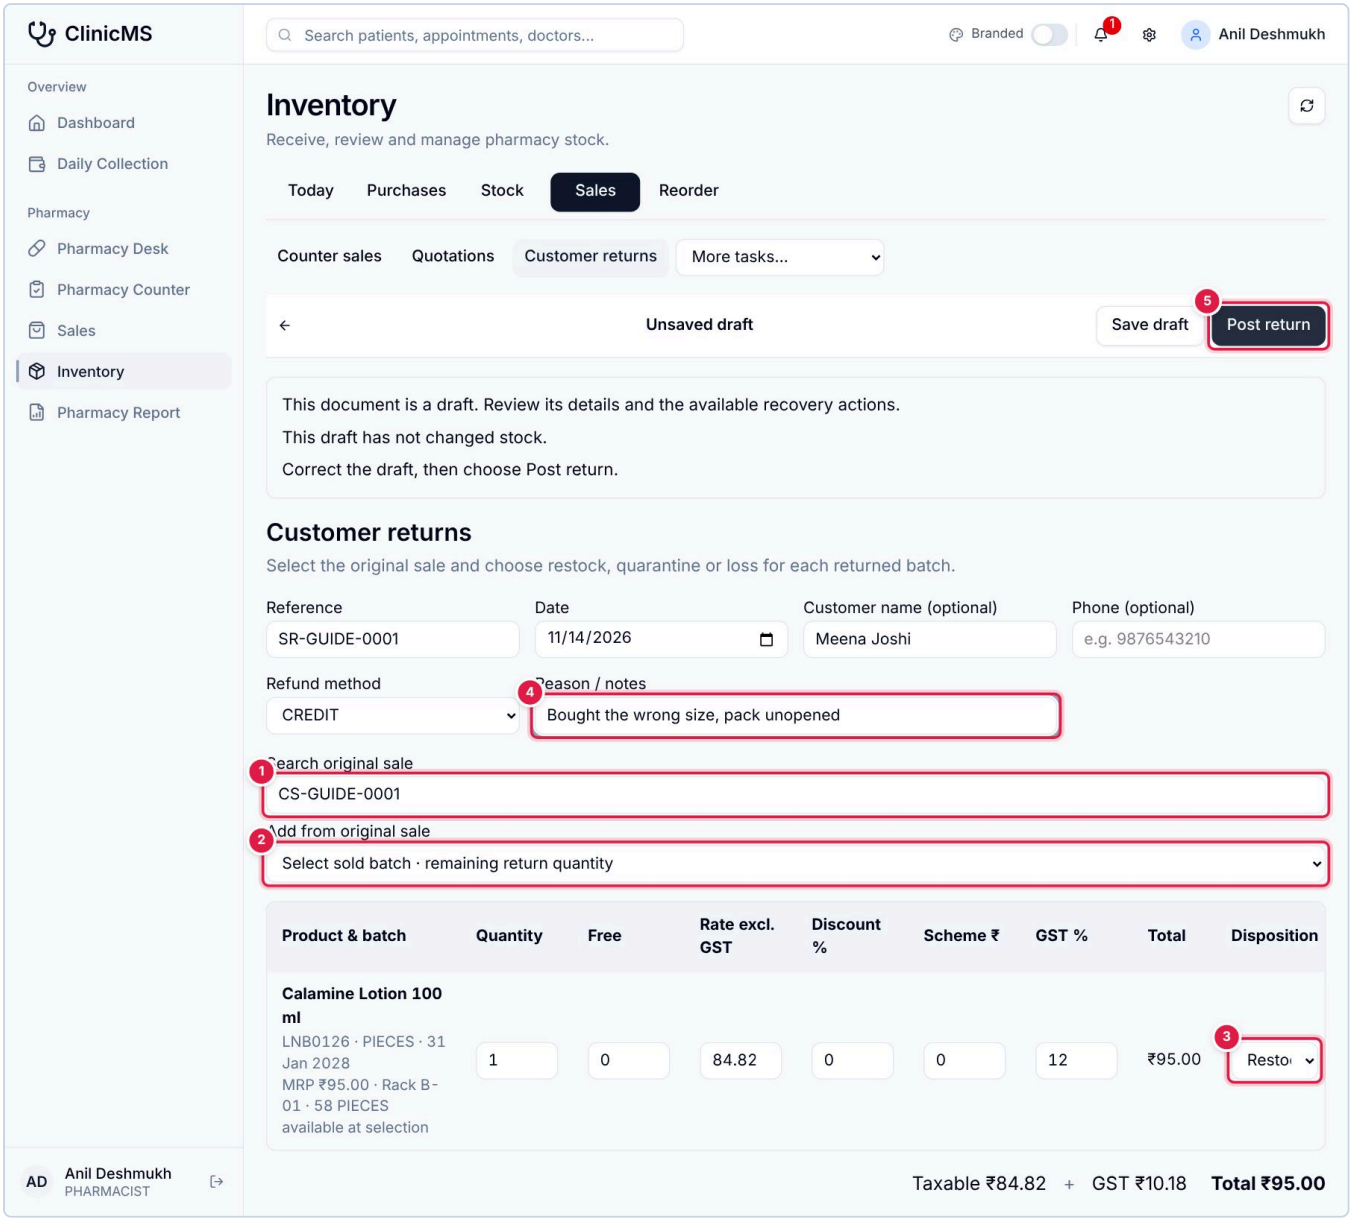

Figure 14.16. A customer return. (1) the original sale, (2) the line taken from it, (3) the disposition, (4) the reason, (5) Post return.

DISPOSITION	WHAT IT DOES
Restock	The item is sound. It goes back on the shelf and stock goes up.
Quarantine	The item is held aside until someone checks it. It is not for sale. It appears under Stock › Blocked stock.
Record as loss	The item is thrown away. Stock does not go up and the loss is recorded.
Refund method	Cash, UPI, Card or Credit.

14.10 Quotations and patient invoice history

WHO USES THIS Pharmacists, reception

A **quotation** is a price quote for a customer. It does not hold stock and does not sell anything. When the customer agrees, click **Create sale draft**. This can be done once, and gives a counter sale draft you then post as usual.

Choose the **Request source** so the app can learn from it. **Unfilled customer demand** means the customer wanted something you did not have. **Requested refill** means a patient will need a repeat supply on the **Expected date**. Both feed the target proposals when the settings include them.

Patient invoice history (under **More tasks...**) lists the pharmacy bills raised for patients from the Pharmacy Desk. Use **Search**, **Status**, **Payment Status**, **Payment Method** and **Date Range** to find a bill. Each card shows the patient, doctor, payment, items and total.

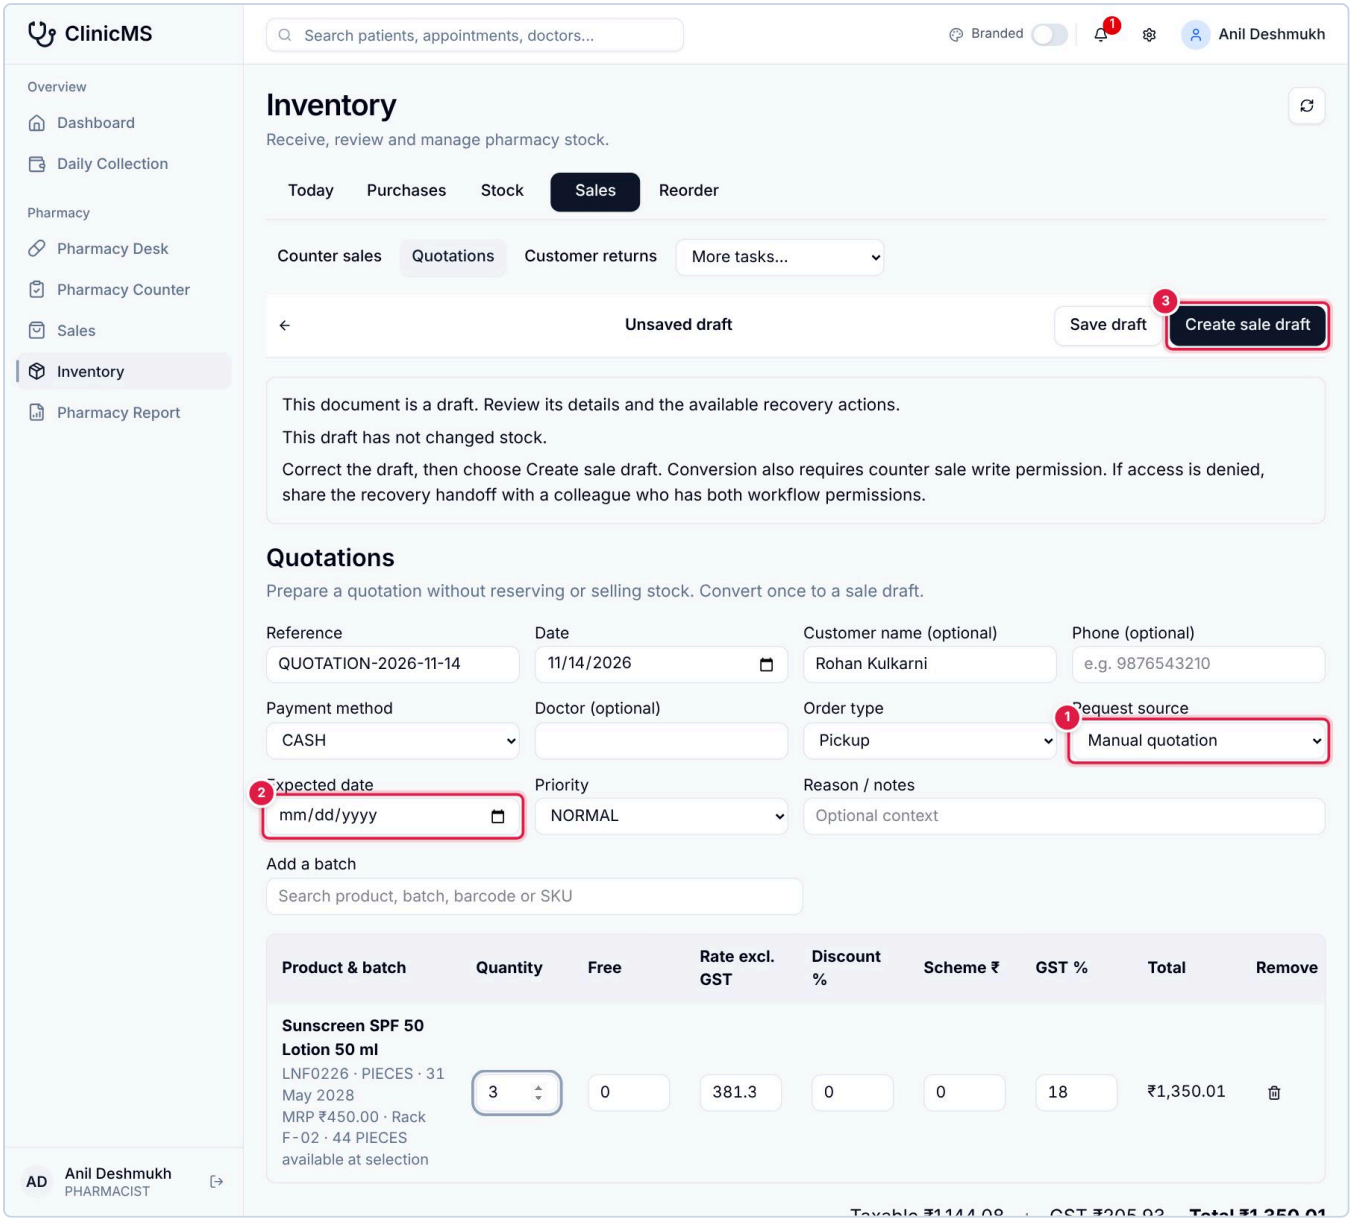

Figure 14.17. A new quotation. (1) the request source, (2) the expected date and priority, (3) Create sale draft once the customer agrees.

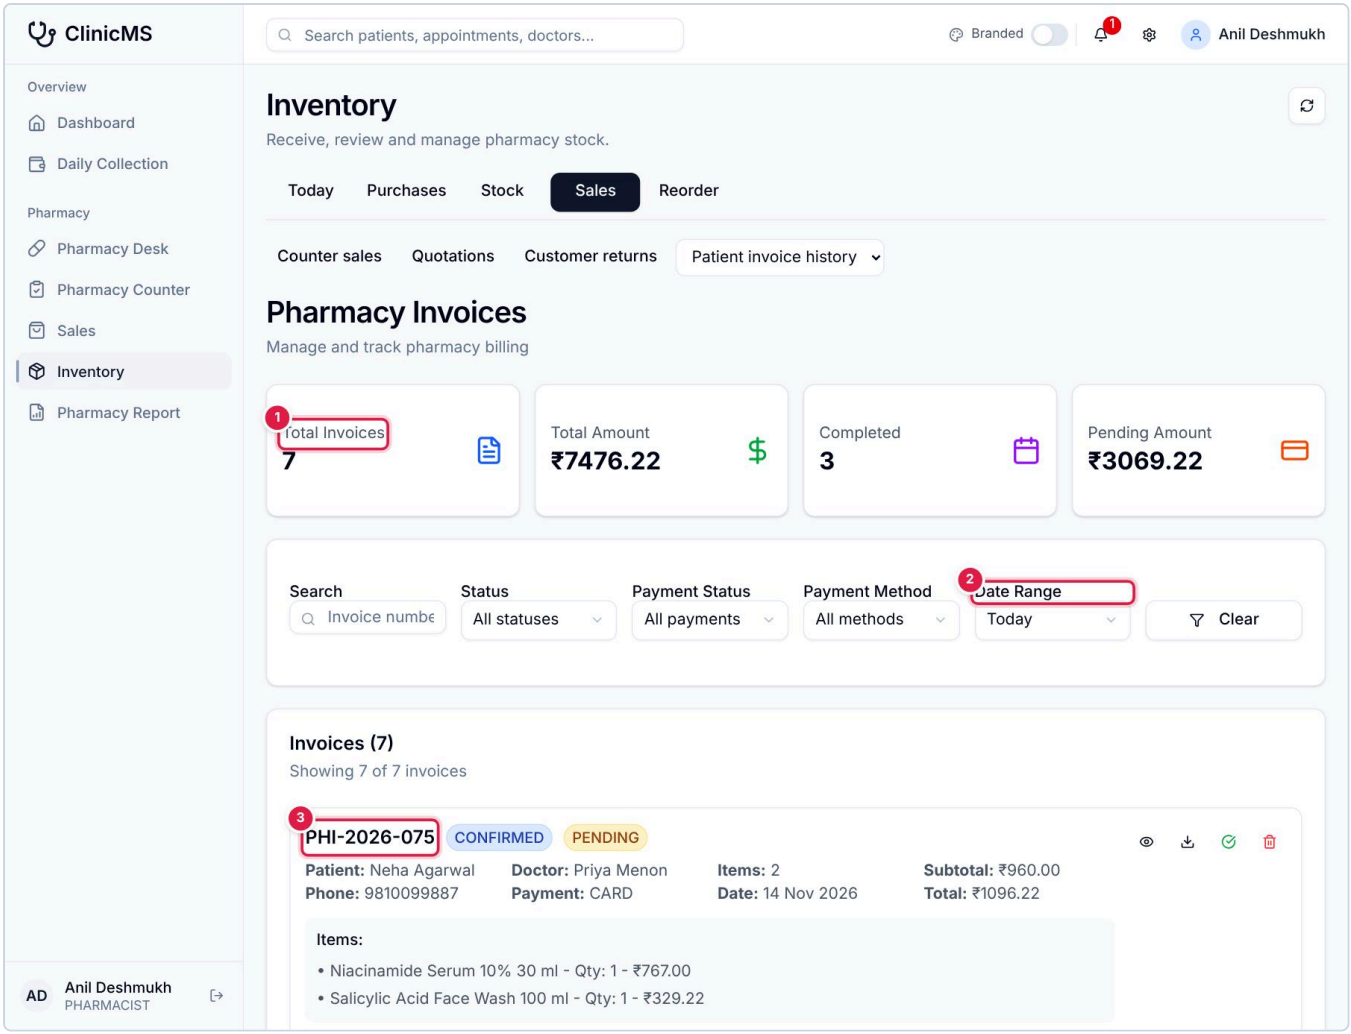

Figure 14.18. Patient invoice history. (1) the totals, (2) the filters, (3) one bill with its patient, doctor, payment and items.

ON SCREEN	MEANING
Quotations list	Filter by **Status**, **Reference** and dates. **New quotation** starts one.
Create sale draft	Turns an agreed quotation into a counter sale draft.
Request source	Manual quotation, Unfilled customer demand or Requested refill.
Total Invoices, Total Amount, Completed, Pending Amount	The four totals above the invoice history.

14.11 Inventory Sales and the Sales item in the menu

WHO USES THIS Pharmacists, doctors, admins, owners

The main menu has its own **Sales** item (under Pharmacy). It is not the same thing as **Inventory › Sales**. The menu item is the register of pharmacy bills. It shows every sale, whoever made it: bills from the Pharmacy Desk for patients, and counter sales posted from Inventory. You use it to look up, print or correct the discount on a bill.

Inventory › Sales is where a sale is created and controlled from the stock side. You choose the exact batch, and a posted sale shows the stock it took. A counter sale posted here appears in the menu's **Sales** register with the reference you gave it.

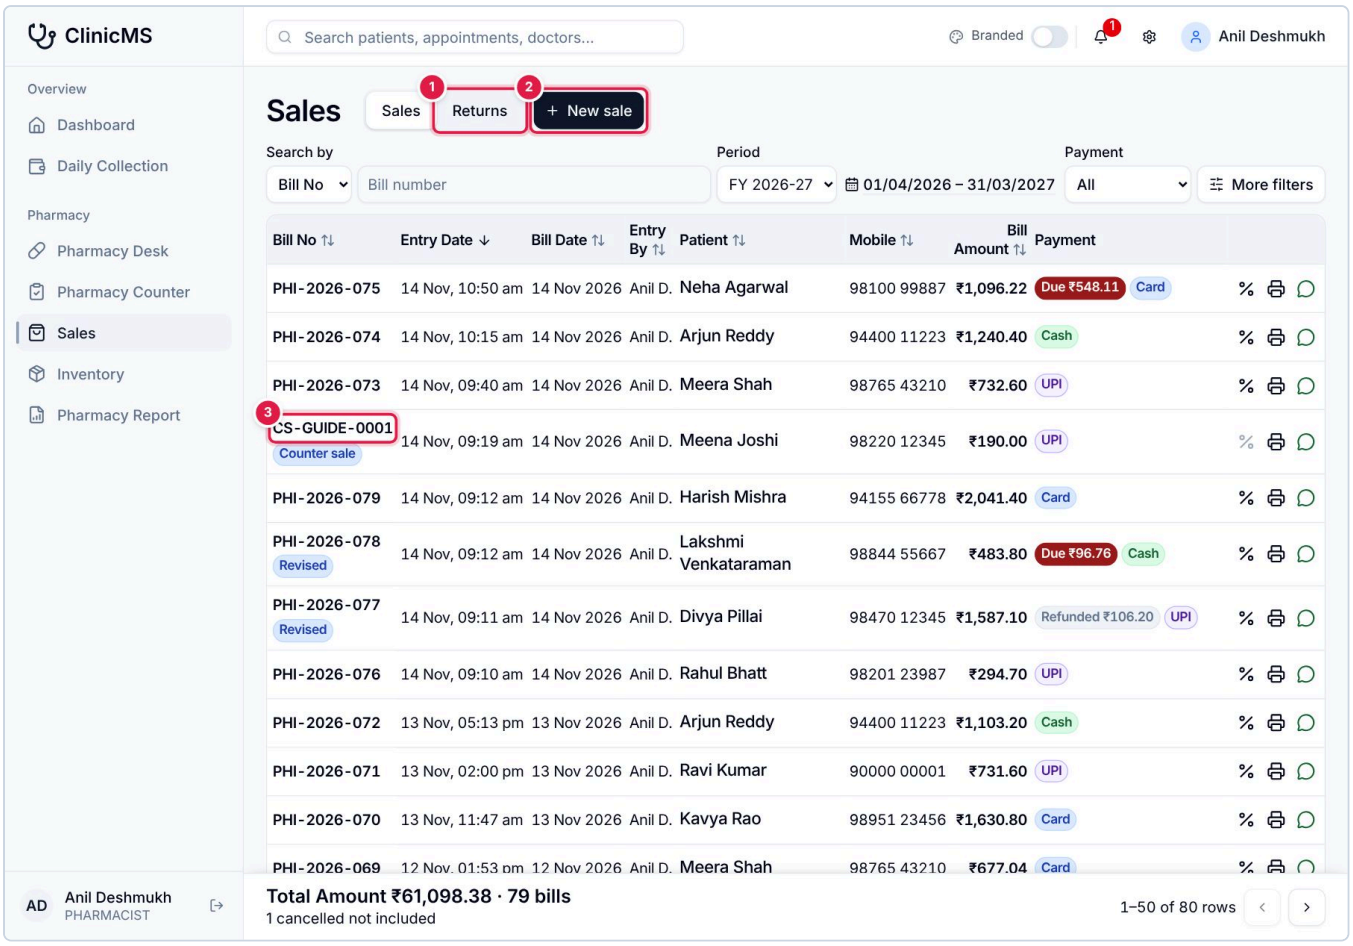

Figure 14.19. The Sales item in the main menu. (1) the Sales and Returns tabs, (2) New sale, (3) the counter sale posted from Inventory appears among the bills.

CHAPTER 15

Pharmacy Report

Pharmacy Report holds the pharmacy's accounting, GST and stock reports, and the Daily Collection, where the day's takings are counted. Pharmacists, doctors, managers, admins and owners use it; your accountant will ask for several of these reports each month. All figures come from posted pharmacy bills, counter sales, customer returns and supplier bills already added to stock. Drafts are left out.

15.1 Find a report

WHO USES THIS Pharmacists, doctors, managers, admins and owners

Open **Pharmacy Report** from the Pharmacy part of the menu. The left of the page lists every report, grouped as GST Reports, Margin Reports, Stock Reports, Accounting Reports and Others. The right shows the most used reports as cards.

The yellow note at the top is a reminder: the figures are only as good as the stock and purchase records behind them. Until the clinic's stock take and medicine-name clean-up are finished, check margins and GST totals against the bills before you file anything.

1. Click a report name on the left, or a card under **Common reports**.
2. Or type in **Search reports**, for example *GSTR* or *expiry*. The list shrinks to the reports that match.
3. Inside a report, click **Pharmacy Report** at the top left to come back to this page.

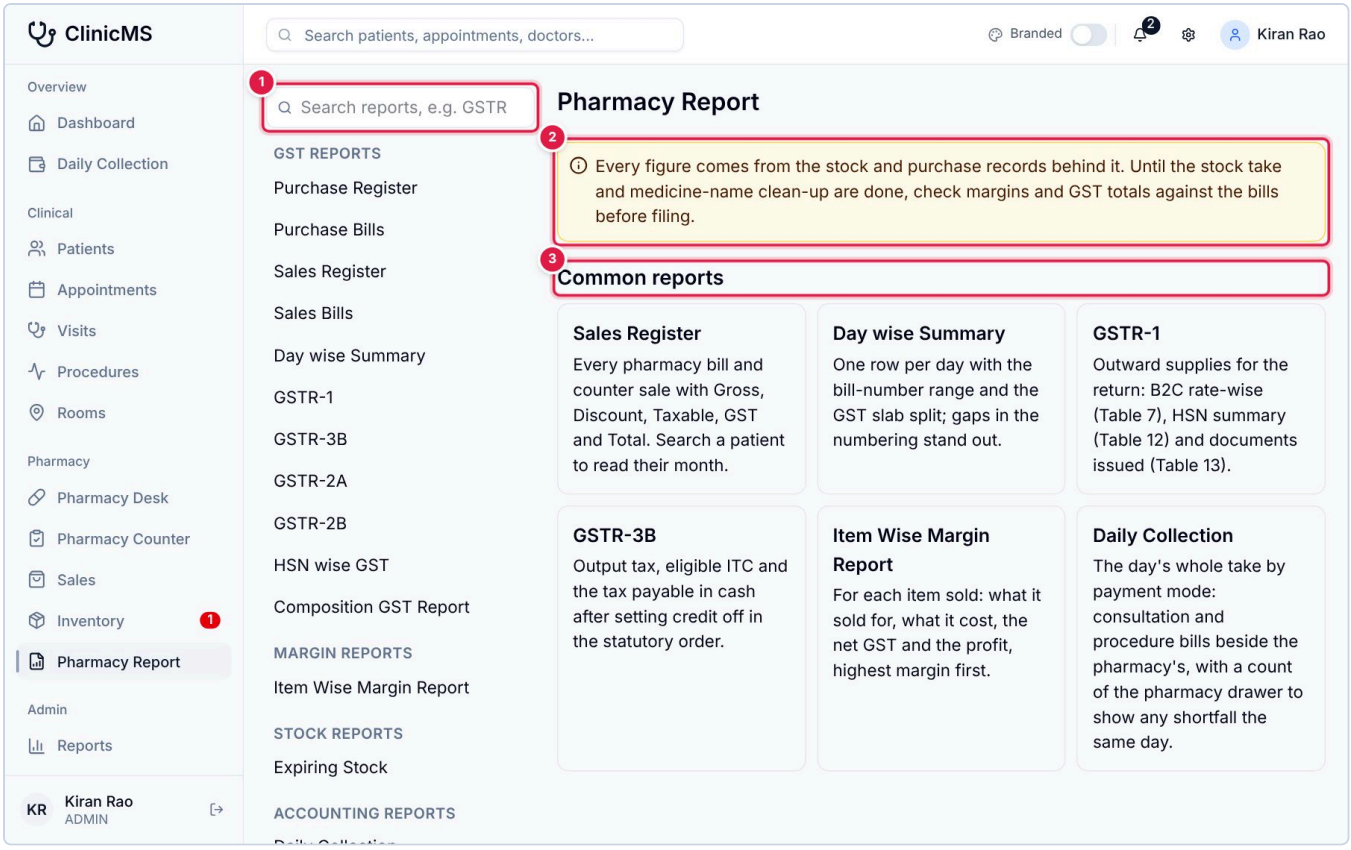

Figure 15.1. The Pharmacy Report page.

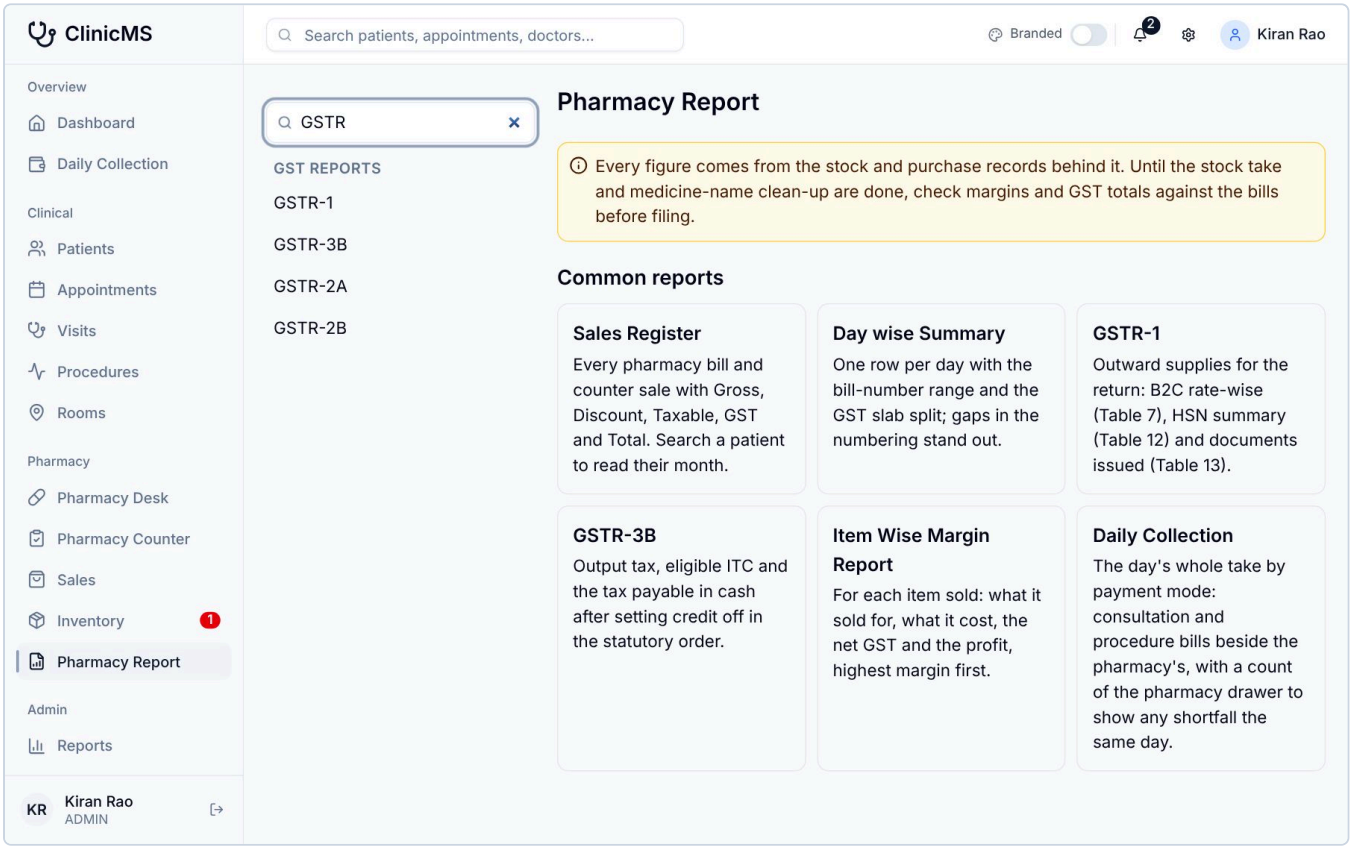

Figure 15.2. Searching the list for GSTR leaves the four GST returns.

ON THE SCREEN	WHAT IT MEANS
1. Search reports	Finds a report by name or by words linked to it.
2. Yellow note	Check figures against the bills until the stock data is cleaned up.
3. Common reports	Sales Register, Day wise Summary, GSTR-1, GSTR-3B, Item Wise Margin Report and Daily Collection.
Daily Collection in the menu	The **Daily Collection** item under Overview opens the same Daily Collection report directly.

15.2 Use the report toolbar

WHO USES THIS Everyone who uses Pharmacy Report

Most reports share one toolbar above the figures. A report shows only the filters it needs. The (i) beside the report's title says in one sentence what the report is for. Wide tables scroll sideways: scroll inside the table to see the columns on the right.

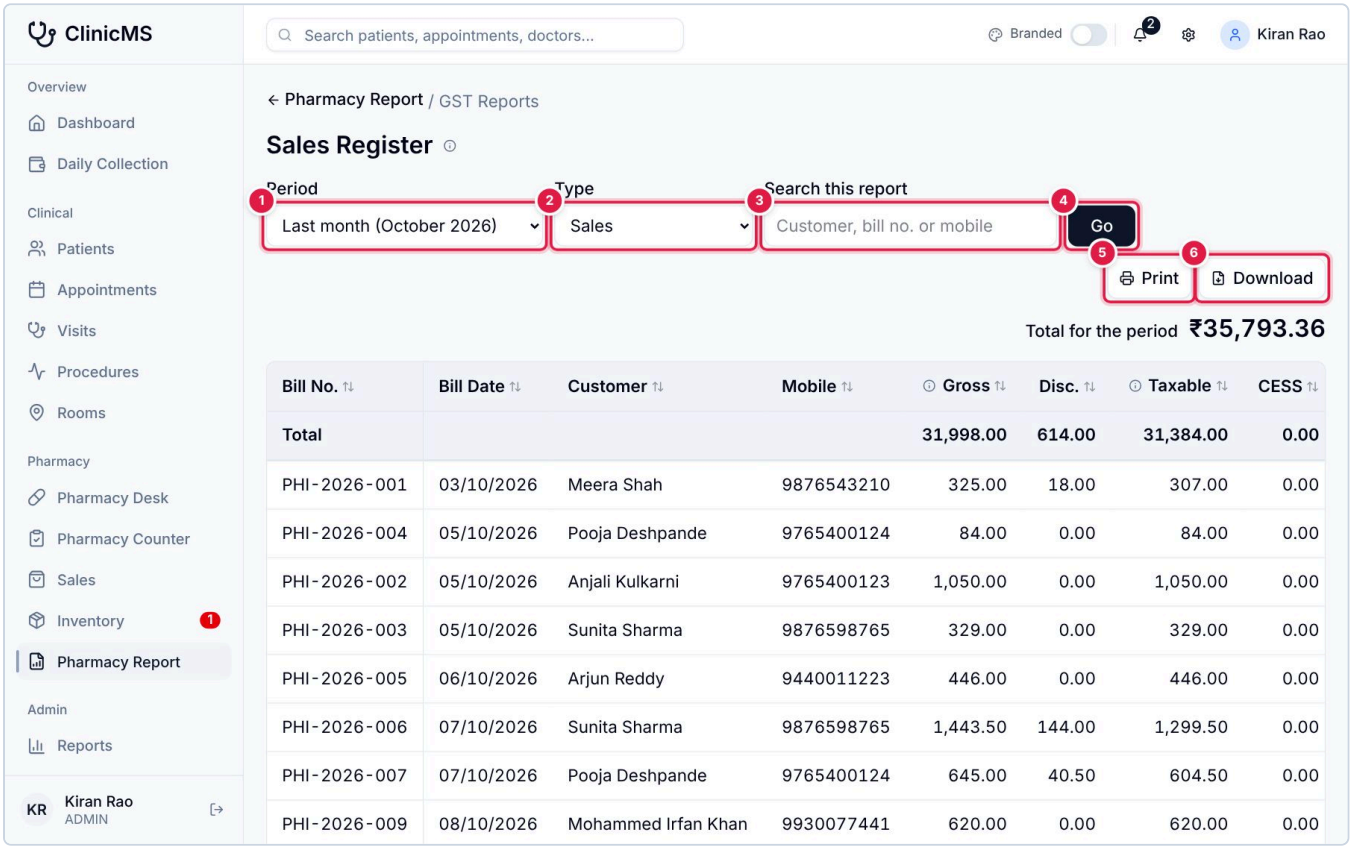

Figure 15.3. The toolbar on the Sales Register.

ON THE SCREEN	WHAT IT MEANS
Period	The dates the report covers: this month, last month, one of the past twelve months, this or last quarter, this or last financial year, or **Choose dates...** for your own **From** and **To**. GST returns open on last month, because they are filed for the month just ended.
Search this report	Shown on reports with many rows. Type part of a name, bill number, mobile number or GSTIN.
Go	Runs the report with the filters you chose. Nothing changes until you click it.
Print	Prints the report, laid out for paper.
Download	Saves the report as **Excel (.xlsx)**, **CSV** or **PDF**, with the same filters.
Column headings	Click a heading to sort by it; click again to reverse. An (i) beside a heading explains how that column is worked out.
Total row	The first row under the headings adds up the whole period.
How these figures are worked out	Click it at the bottom of a report to read the rules behind the figures.

> **TIP**
> Print and Download always use the filters on screen after you last clicked **Go**.

15.3 Purchase Register

WHO USES THIS Pharmacists, accountants

Every supplier bill added to stock, one row each. Use it to check the month's purchases and input GST against the supplier bills in your file. Filters: Period and Search (distributor, bill number or GSTIN).

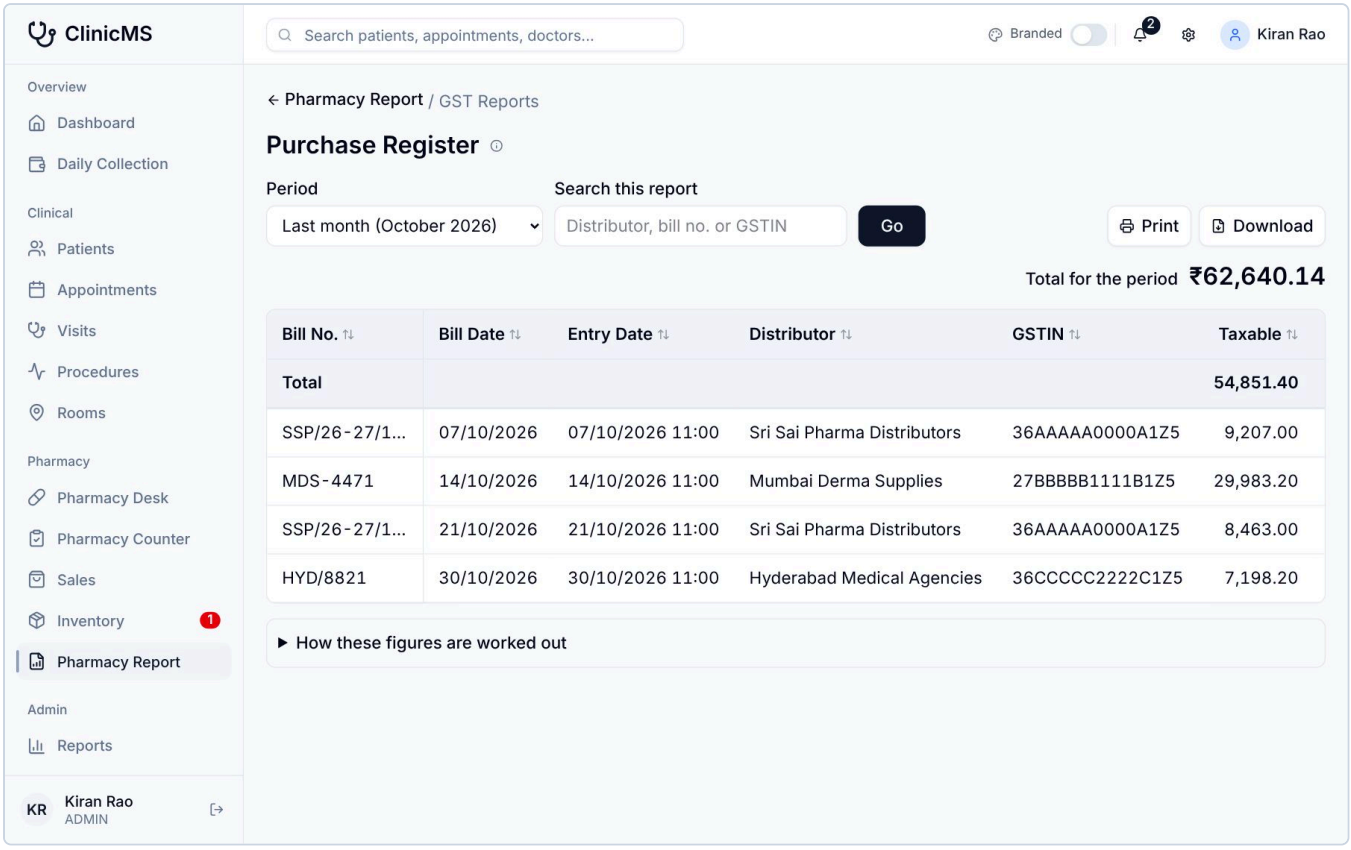

Figure 15.4. Purchase Register for last month.

COLUMN	MEANING
Bill No., Bill Date	The supplier's bill number and date.
Entry Date	When the bill was entered in the app.
Distributor, GSTIN	The supplier and their GST number.
Taxable	The value before GST.
CGST, SGST, IGST, CESS	The GST on the bill. A supplier in Telangana charges CGST and SGST; one from another state charges IGST.
Total GST, Other, Bill Amount	All GST, any other charges, and the bill total.

15.4 Purchase Bills and Sales Bills

WHO USES THIS Pharmacists, accountants

These two reports split each bill across the GST slabs: CESS, 0%, 5%, 12%, 18%, 28% and 40%. Each slab has Base (the value before tax), SGST, CGST and IGST, and the last columns give the totals. Purchase Bills shows supplier bills; Sales Bills shows pharmacy bills. They are the same report with a different **Type**.

Filters: Period, **Type** (Sales or Purchase), **GST** (All bills, With GST, Without GST) and Search.

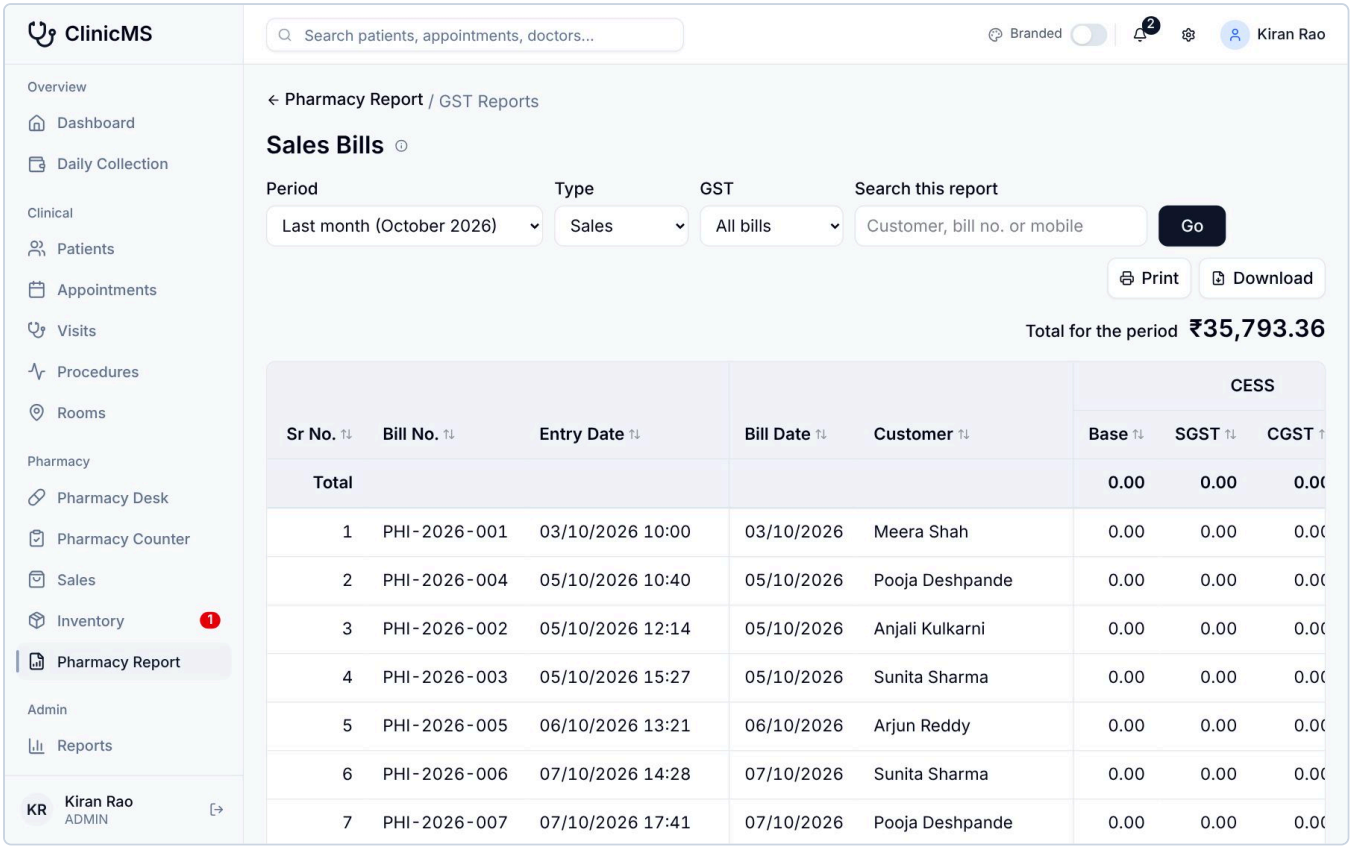

Figure 15.5. Sales Bills, one row per bill, split by GST slab.

COLUMN	MEANING
Sr No., Bill No.	Row number and bill number.
Entry Date, Bill Date	When it was entered and the date on the bill.
Customer / Distributor	Who the bill is for, or from.
Base, SGST, CGST, IGST under each slab	That part of the bill taxed at that rate.
Total: Base, SGST, CGST, IGST, Amount	The bill's totals.

15.5 Sales Register

WHO USES THIS Pharmacists, accountants, doctors

Every pharmacy bill and counter sale, one row each. Search a patient's name or mobile number to see everything they bought in the period.

Type chooses **Sales**, **Returns** (customer returns, shown as minus amounts) or **Sales net of returns**.

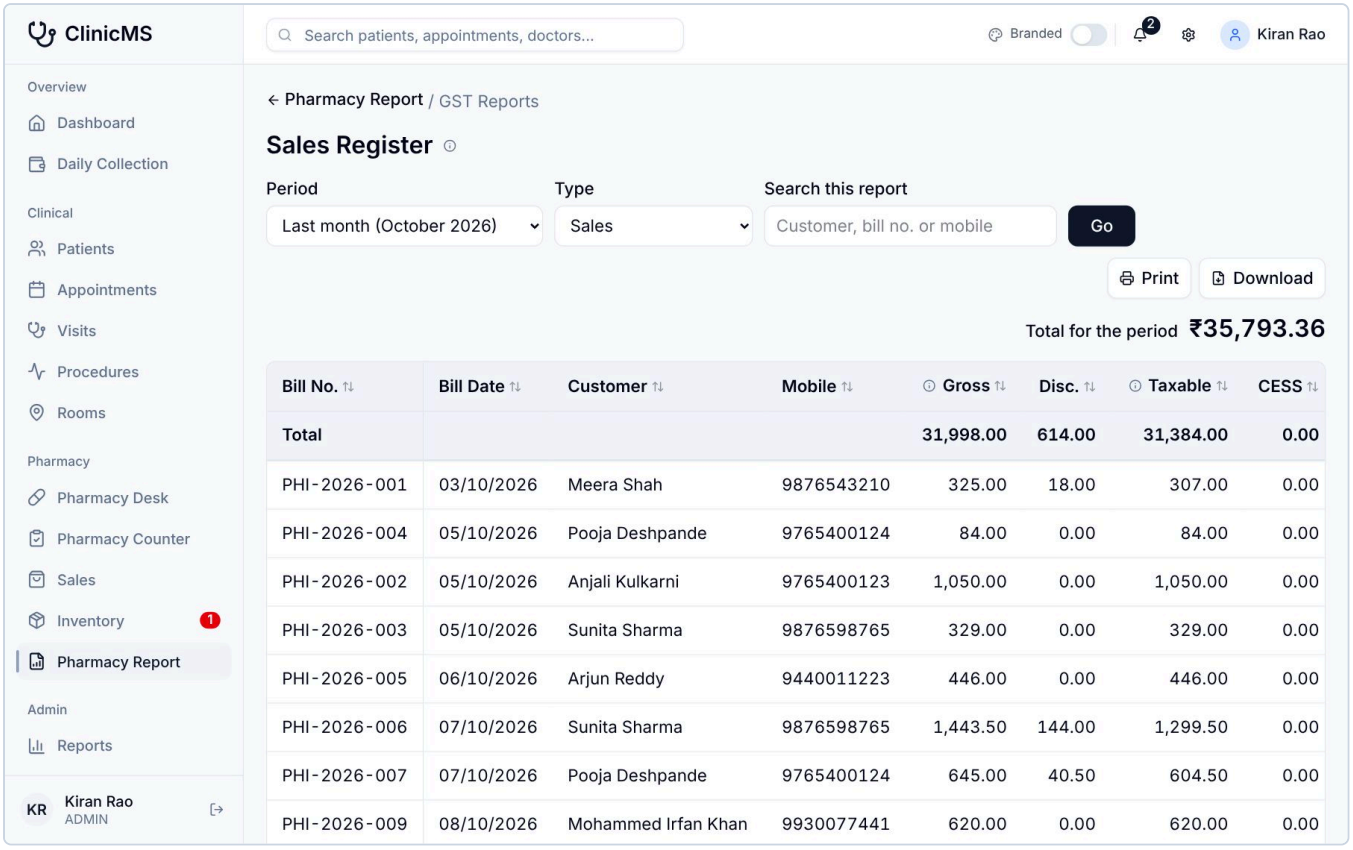

Figure 15.6. Sales Register for last month.

COLUMN	MEANING
Bill No., Bill Date, Customer, Mobile	Which bill, when, and who it was for.
Gross	The price of the items before discount.
Disc.	Discount given.
Taxable	Gross less discount.
CESS, SGST, CGST, IGST	The GST on the bill.
Total	Taxable plus all GST: what the customer paid.

15.6 Day wise Summary

WHO USES THIS Pharmacists, accountants

One row per day with the first and last bill number of the day and the GST slab split. Days with no bills show as ₹0 rows, so a gap in the bill numbers stands out. The line above the table counts the bills and days.

Filters: **From**, **To** and **Type** (Sales or Purchase), then **Go**. This report has **Download** but no Print button.

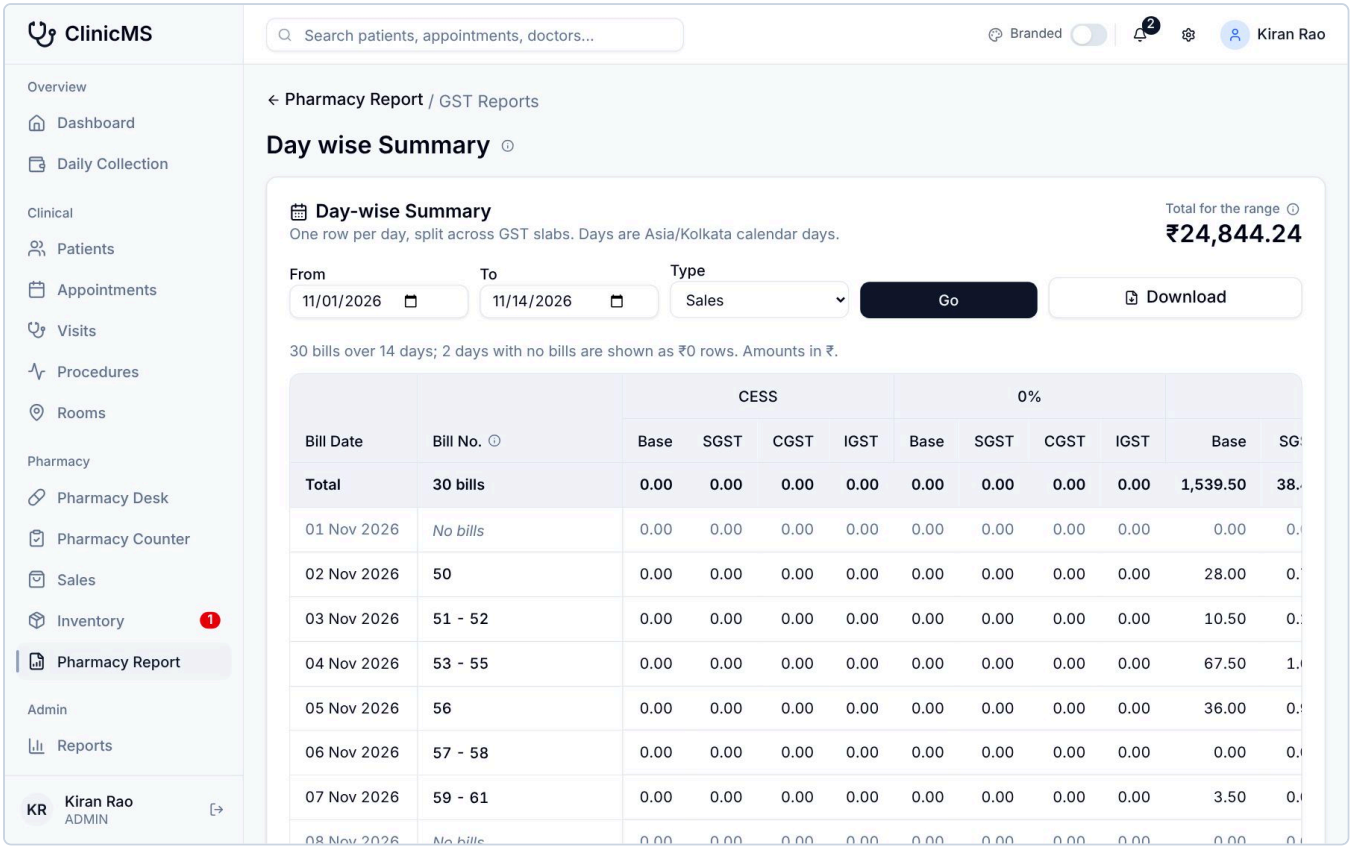

Figure 15.7. Day wise Summary for this month.

15.7 GSTR-1

WHO USES THIS Accountants

The figures for the monthly GSTR-1 return of outward supplies. Pharmacy bills do not record a buyer GSTIN, so every sale is reported as B2C, net of returns, and B2B (Table 4) is empty. The report has three tables.

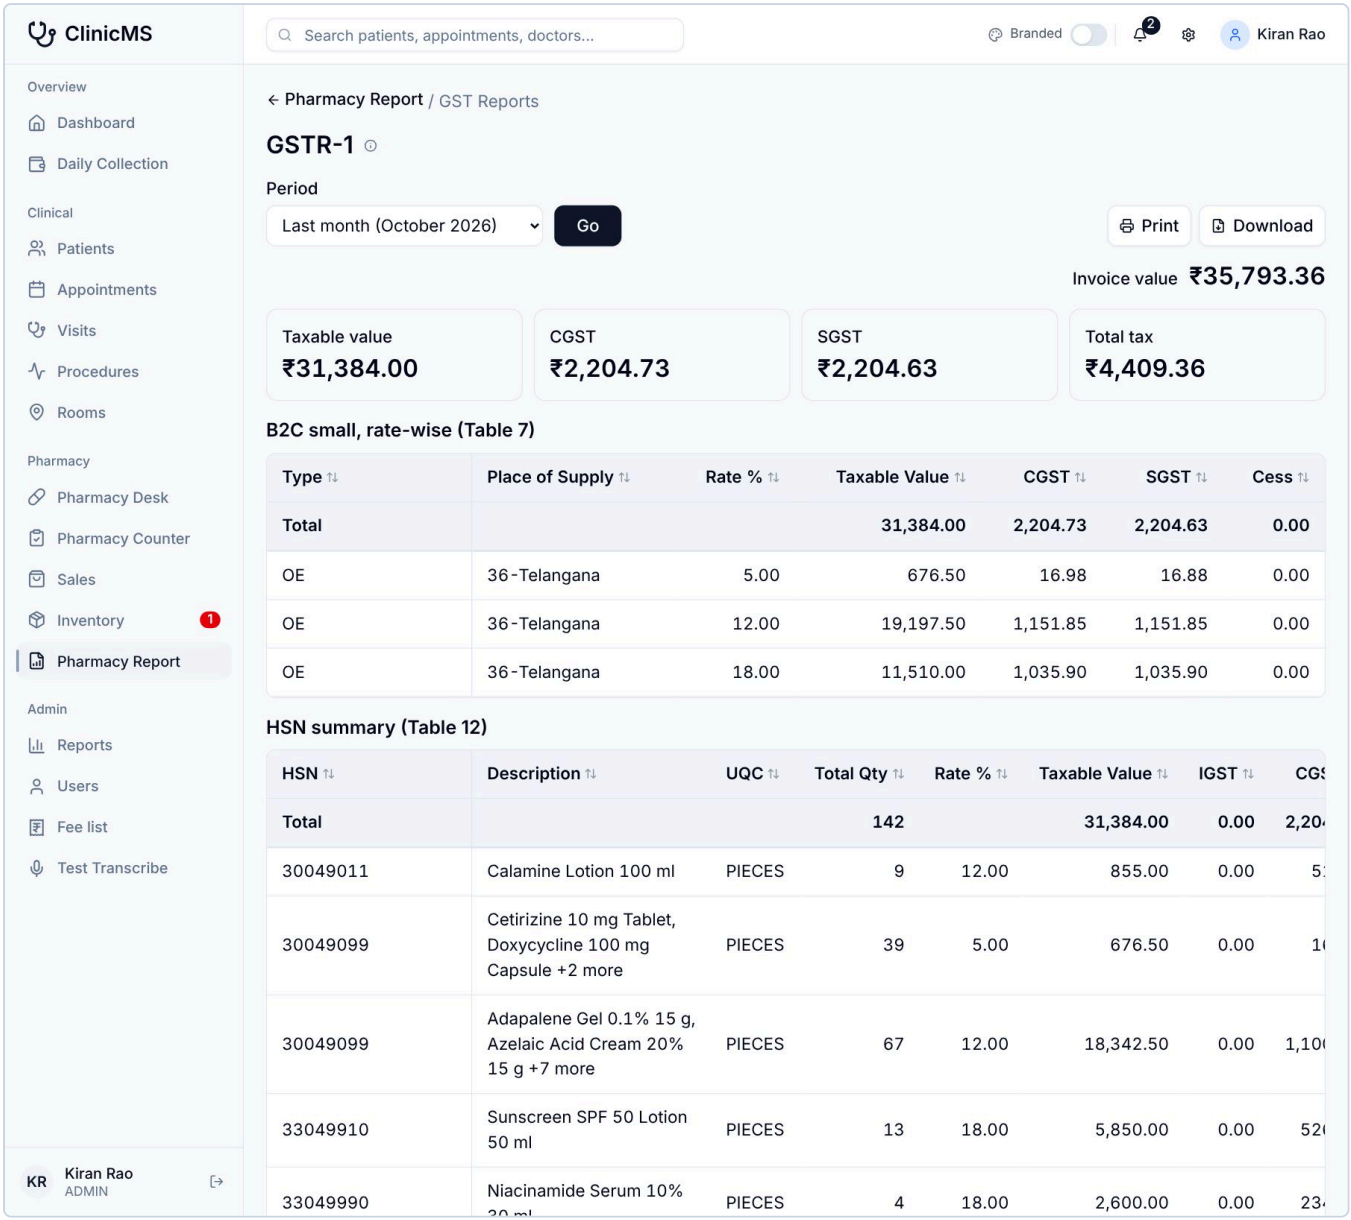

Figure 15.8. GSTR-1 for last month.

TABLE	WHAT IT HOLDS
Boxes at the top	Invoice value for the period, then Taxable value, CGST, SGST and Total tax.
B2C small, rate-wise (Table 7)	Type, Place of Supply (36-Telangana), Rate %, Taxable Value, CGST, SGST and Cess for each GST rate.
HSN summary (Table 12)	For each HSN code and rate: Description, UQC (unit), Total Qty, Taxable Value, IGST, CGST, SGST, CESS and Total Value.
Documents issued (Table 13)	The first and last bill number (Sr. No. From and To), Total number, Cancelled and Net issued.

15.8 GSTR-3B

WHO USES THIS Accountants

The figures for the monthly GSTR-3B summary return. Table 3.1 and 4 show outward supplies and the eligible input tax credit (ITC). Table 6.1 shows the tax payable and how credit is set off against it, leaving the tax to pay in cash.

The ITC comes from the clinic's own supplier bills. Claim only what the GST portal shows in your GSTR-2B for the month.

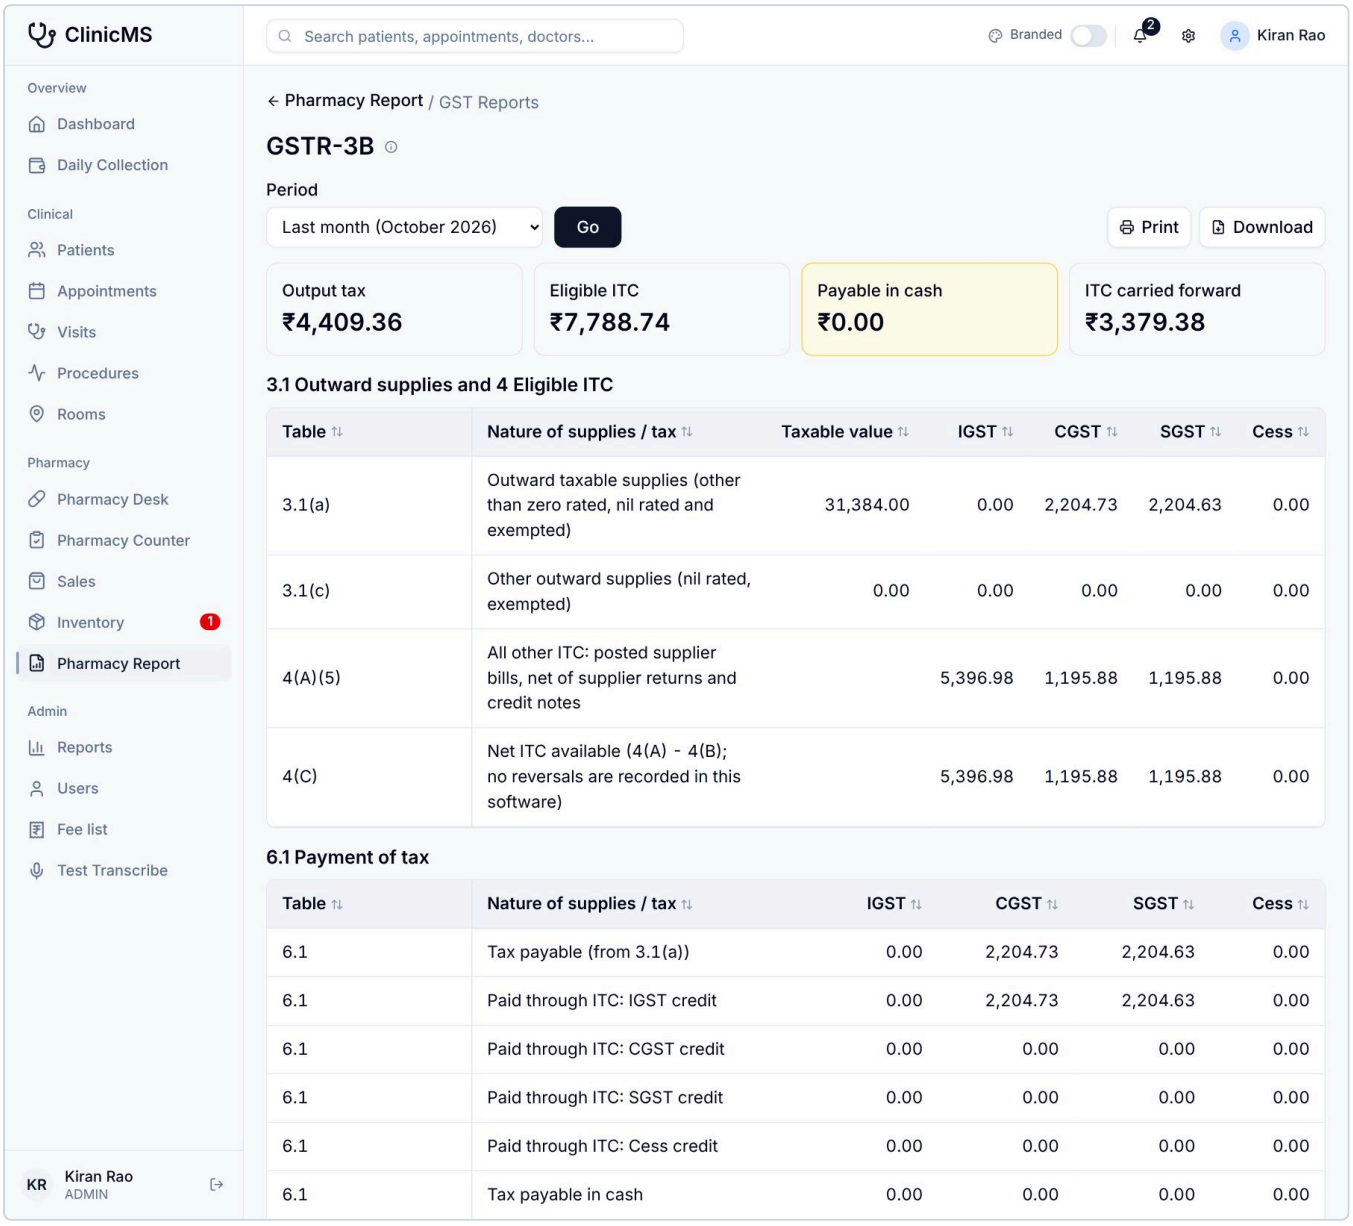

Figure 15.9. GSTR-3B for last month.

COLUMN	MEANING
Boxes at the top	**Output tax** on sales, **Eligible ITC** from purchases, **Payable in cash** after the credit is used (highlighted), and **ITC carried forward** to next month.
Table	The table number on the GST form, such as 3.1(a).
Nature of supplies / tax	What the line is.
Taxable value, IGST, CGST, SGST, Cess	The amounts for that line.

15.9 GSTR-2A and GSTR-2B

WHO USES THIS Accountants

The GST portal prepares GSTR-2A and GSTR-2B from what your suppliers file. These two reports show the clinic's side, from its own supplier bills, laid out the same way so your accountant can match them line by line against the portal download.

GSTR-2A lists each supplier invoice under **B2B invoices**, and supplier returns and credit notes under **Credit / debit notes**. **GSTR-2B** gives one row per supplier with the total input tax credit and flags suppliers without a valid GSTIN.

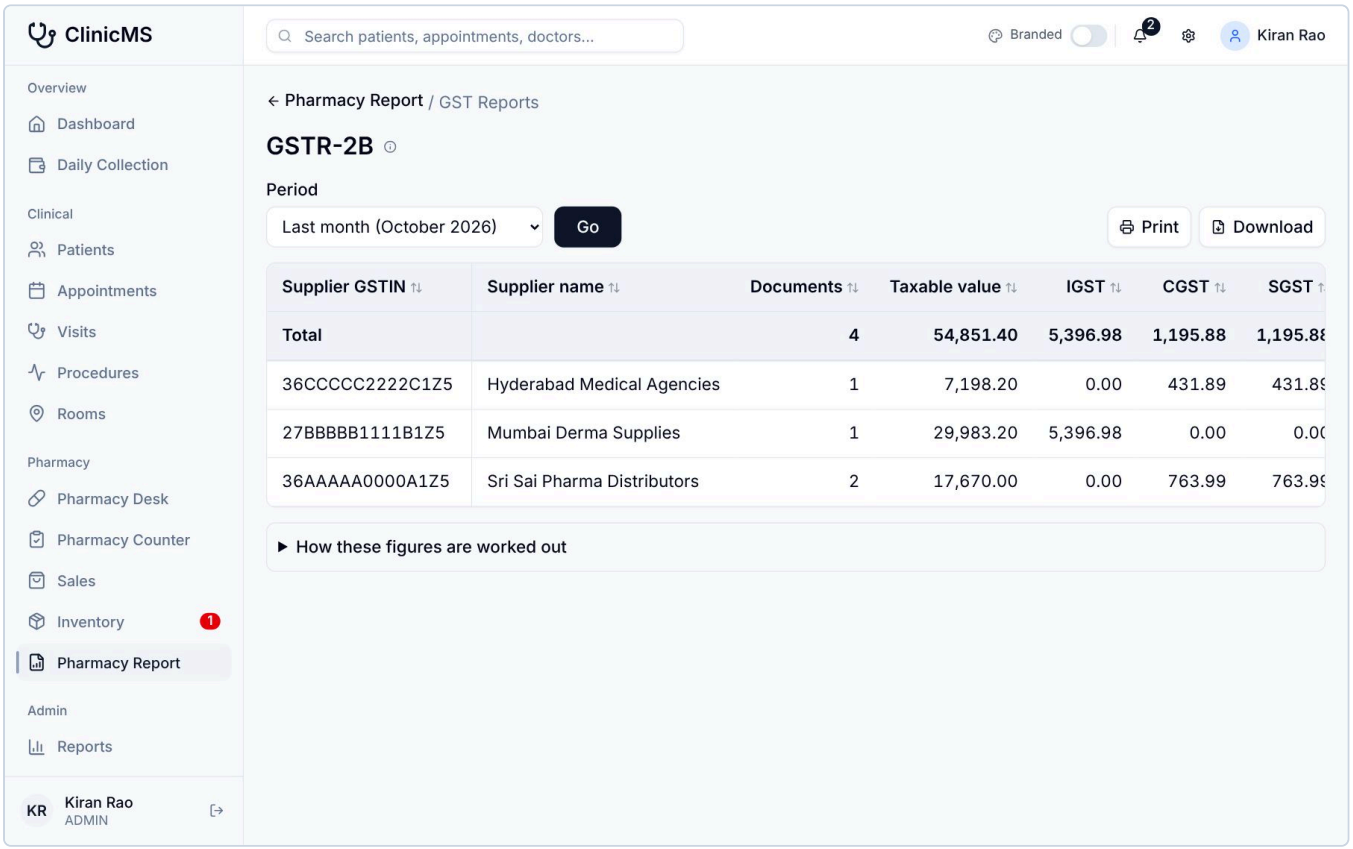

Figure 15.10. GSTR-2B: input tax credit per supplier.

COLUMN	MEANING
Supplier GSTIN, Supplier name	Who the bills are from.
Invoice / note No., Date, Invoice value (2A)	Each bill or credit note.
Place of supply, Rate % (2A)	The supplier's state, and the GST rate.
Documents (2B)	How many bills from that supplier.
Taxable value, IGST, CGST, SGST, Cess	Value before tax and the GST on it.
Total ITC, ITC status (2B)	The credit, and whether it is *Eligible as per books*.

15.10 HSN wise GST

WHO USES THIS Accountants

Quantity, taxable value and GST for each HSN code and rate. Items without an HSN code are listed last; add their HSN code in Inventory. **Type** chooses Sales or Purchase.

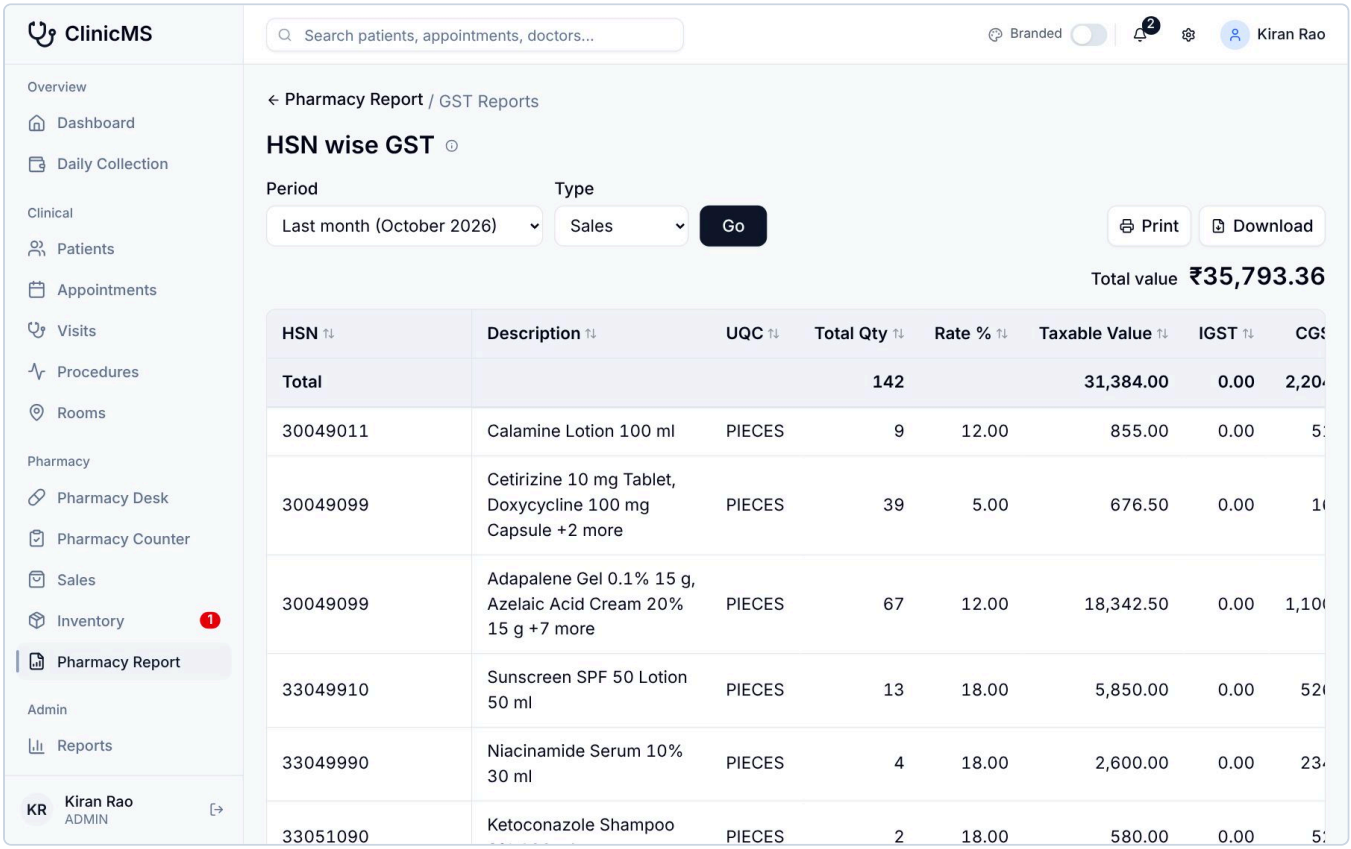

Figure 15.11. HSN wise GST for last month's sales.

COLUMN	MEANING
HSN, Description, UQC	The code, an item name and the unit.
Total Qty, Rate %	Units sold and the GST rate.
Taxable Value, IGST, CGST, SGST, CESS, Total Value	Value before tax, the GST, and the total.

15.11 Composition GST Report

WHO USES THIS Accountants

Only for a pharmacy registered under the GST composition scheme, which files CMP-08 instead of GSTR-1 and GSTR-3B. Choose the **Composition rate**: 1% (trader), 2% (manufacturer), 5% (restaurant) or 6% (services). A pharmacy is normally a trader.

Columns: **Month**, **Outward turnover** (sales less returns, before GST), **Composition rate %**, **CGST** and **SGST** (half each), and **Composition tax**.

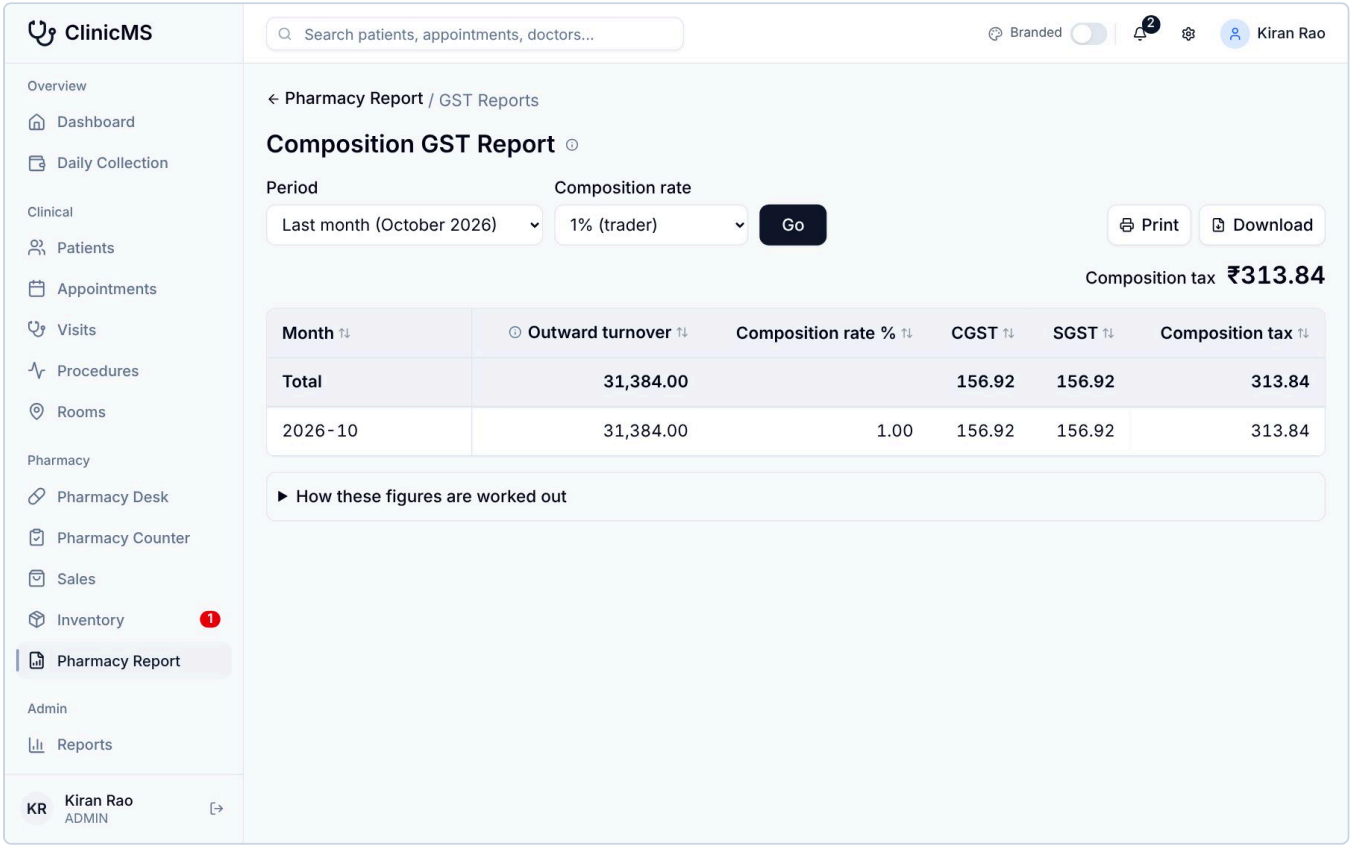

Figure 15.12. Composition GST Report at 1%.

15.12 Item Wise Margin Report

WHO USES THIS Pharmacists, owners

For each item sold, what it sold for, what it cost, the GST and the profit, highest margin first. Use it to see which medicines earn the clinic money.

The four boxes at the top total the period: **Total Sale Amount**, **Total Purchase**, **Total Net GST** and **Total Profit**. A yellow box appears when some sales have no purchase cost recorded: their sales are counted in Total Sale Amount but not in Purchase, Net GST or Profit. Add the purchase price on the item in Inventory so future sales are counted.

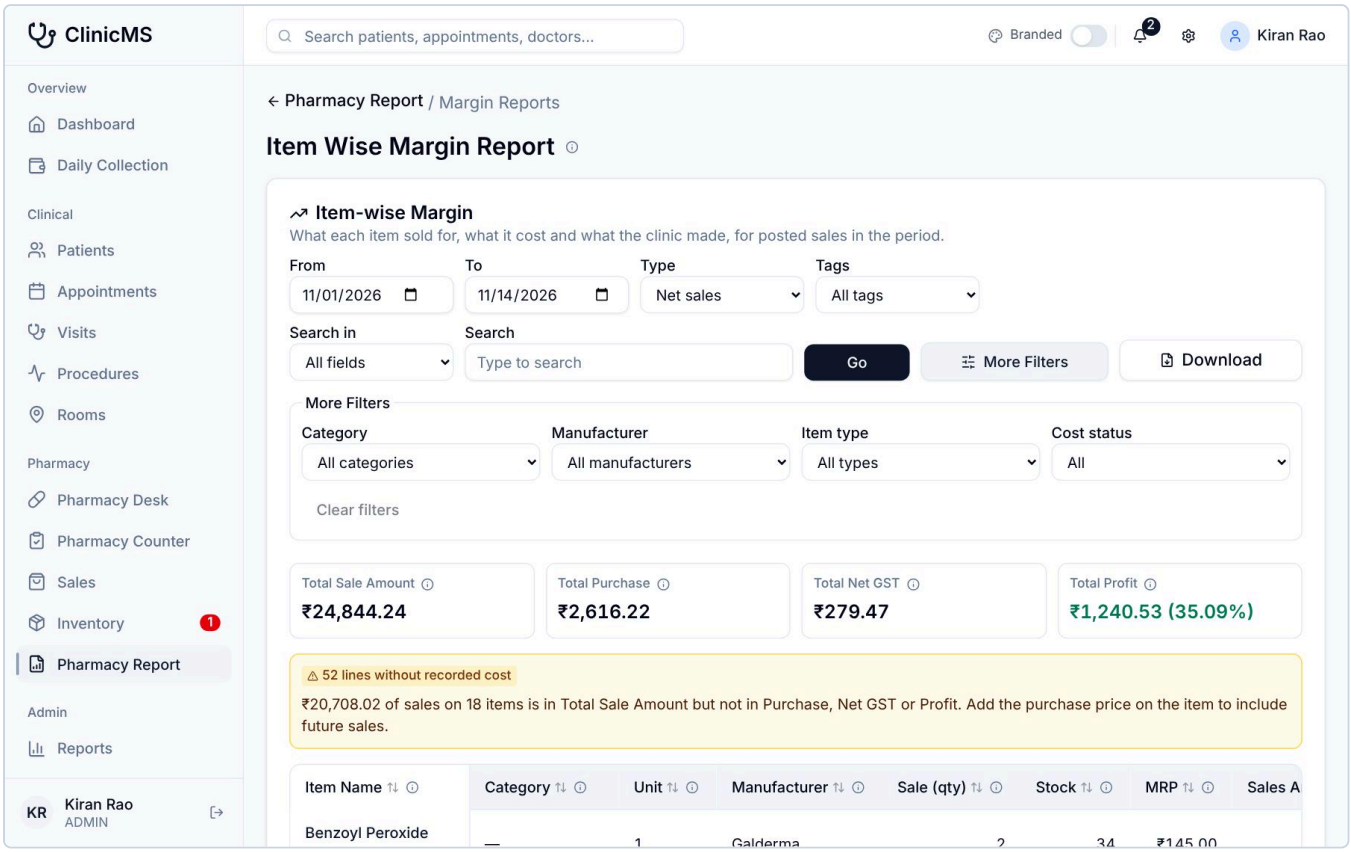

Figure 15.13. Item Wise Margin Report with More Filters open.

FILTER OR COLUMN	MEANING
From, To	The dates of the sales.
Type	**Net sales** (sales less returns), **Sales only** or **Returns only**.
Tags	Only items with this tag.
Search in, Search	Type part of a name and choose whether to look in **All fields**, **Item name**, **Category** or **Manufacturer**.
More Filters	Opens four more filters: **Category**, **Manufacturer**, **Item type** (Medicine, Equipment, Supply, Consumable) and **Cost status** (All, Missing cost, Loss-making). The button shows how many are in use. **Clear filters** resets them.
Item Name, Category, Unit, Manufacturer	Which item, from its newest batch.
Sale (qty)	Units sold less units returned.
Stock, MRP	Stock now, and the MRP of the newest batch.
Sales Amt.	What customers paid, GST included.

Purchase	What those units cost, GST included.
Net GST	GST collected less GST paid on the cost.
Profit ₹ (%)	Sales Amt. less Purchase less Net GST, and as a share of the sale value before GST. Red means a loss.

15.13 Expiring Stock

WHO USES THIS Pharmacists

Batches with stock that have expired or will expire soon, with what they are worth. Check it every month and return the batches to the distributor before they expire. The report shows stock as it is today; there is no period.

Expiry chooses the window: Already expired, Within 1 month, 2 months, 3 months or 6 months.

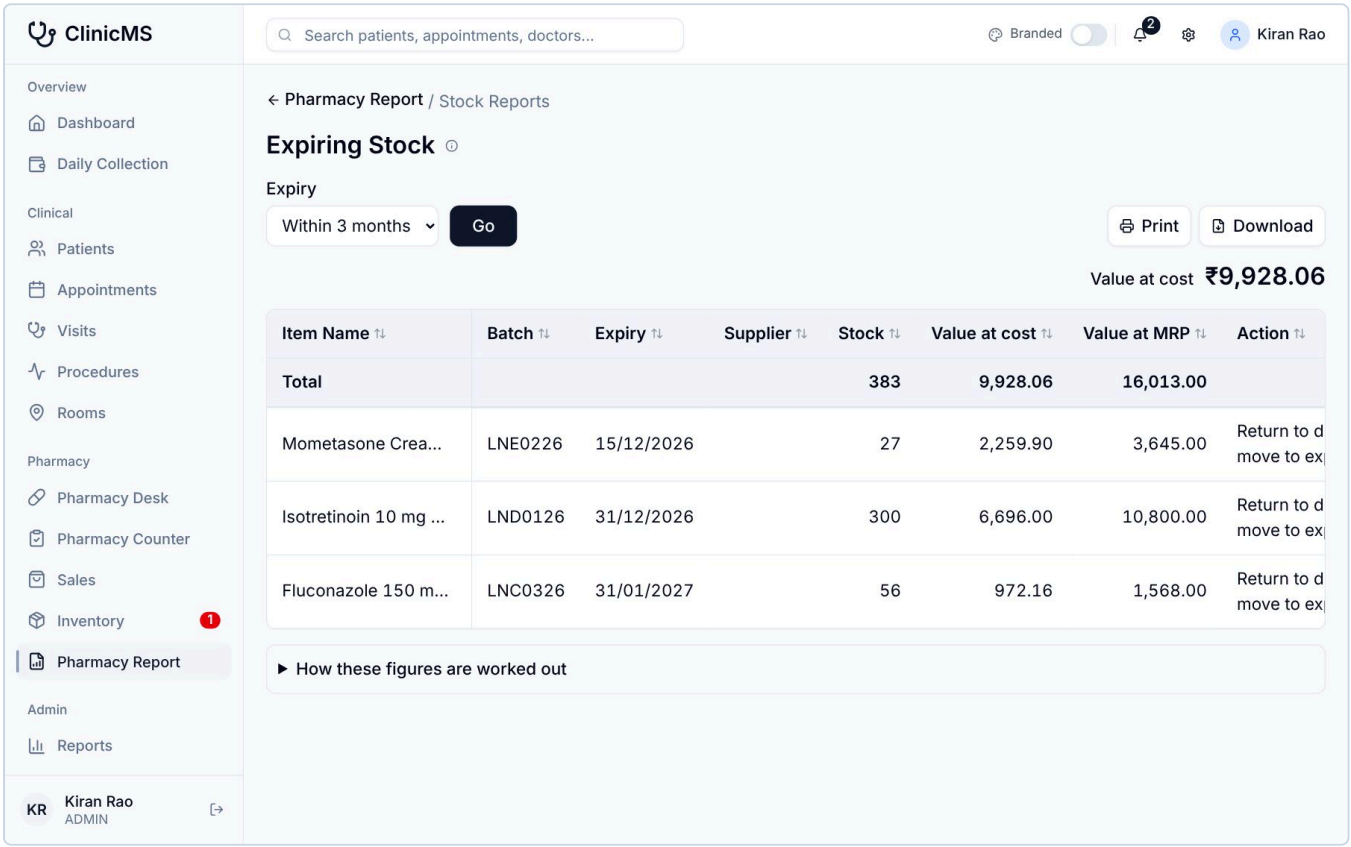

Figure 15.14. Expiring Stock within 3 months.

COLUMN	MEANING
Item Name, Batch, Expiry, Supplier	Which batch and when it expires.
Stock	Units left in that batch.
Value at cost, Value at MRP	What the units cost and what they would sell for.
Action	What to do, for example *Return to distributor or move to expiry bin*.

15.14 Count the day's takings: Daily Collection

WHO USES THIS Pharmacists, reception, doctors, admins

Daily Collection shows the whole day's money by payment mode: clinic consultation and procedure bills beside the pharmacy's sales. At closing time the pharmacy counts its cash drawer and checks its UPI and card settlements, and the app shows at once whether anything is short.

Open it from **Daily Collection** in the menu. It opens on today. Use the arrows beside **Day** to go back or forward a day, or pick a date.

1. Count the cash in the pharmacy drawer.
2. Check the UPI and card settlement totals for the day.
3. In the **Pharmacy reconciliation by payment mode** table, type each amount in the **Counted** box of its row. The **Difference** column shows the gap as you type: a minus amount is money missing.
4. Add a **Note** if something explains a gap, for example cash kept aside for change.
5. Click **Save count**. The coloured line above the boxes changes to say whether the pharmacy balanced, is short or is over.
6. If you count again later, click **Save recount**. Click the **Counted by** line under the table to see every count of the day.

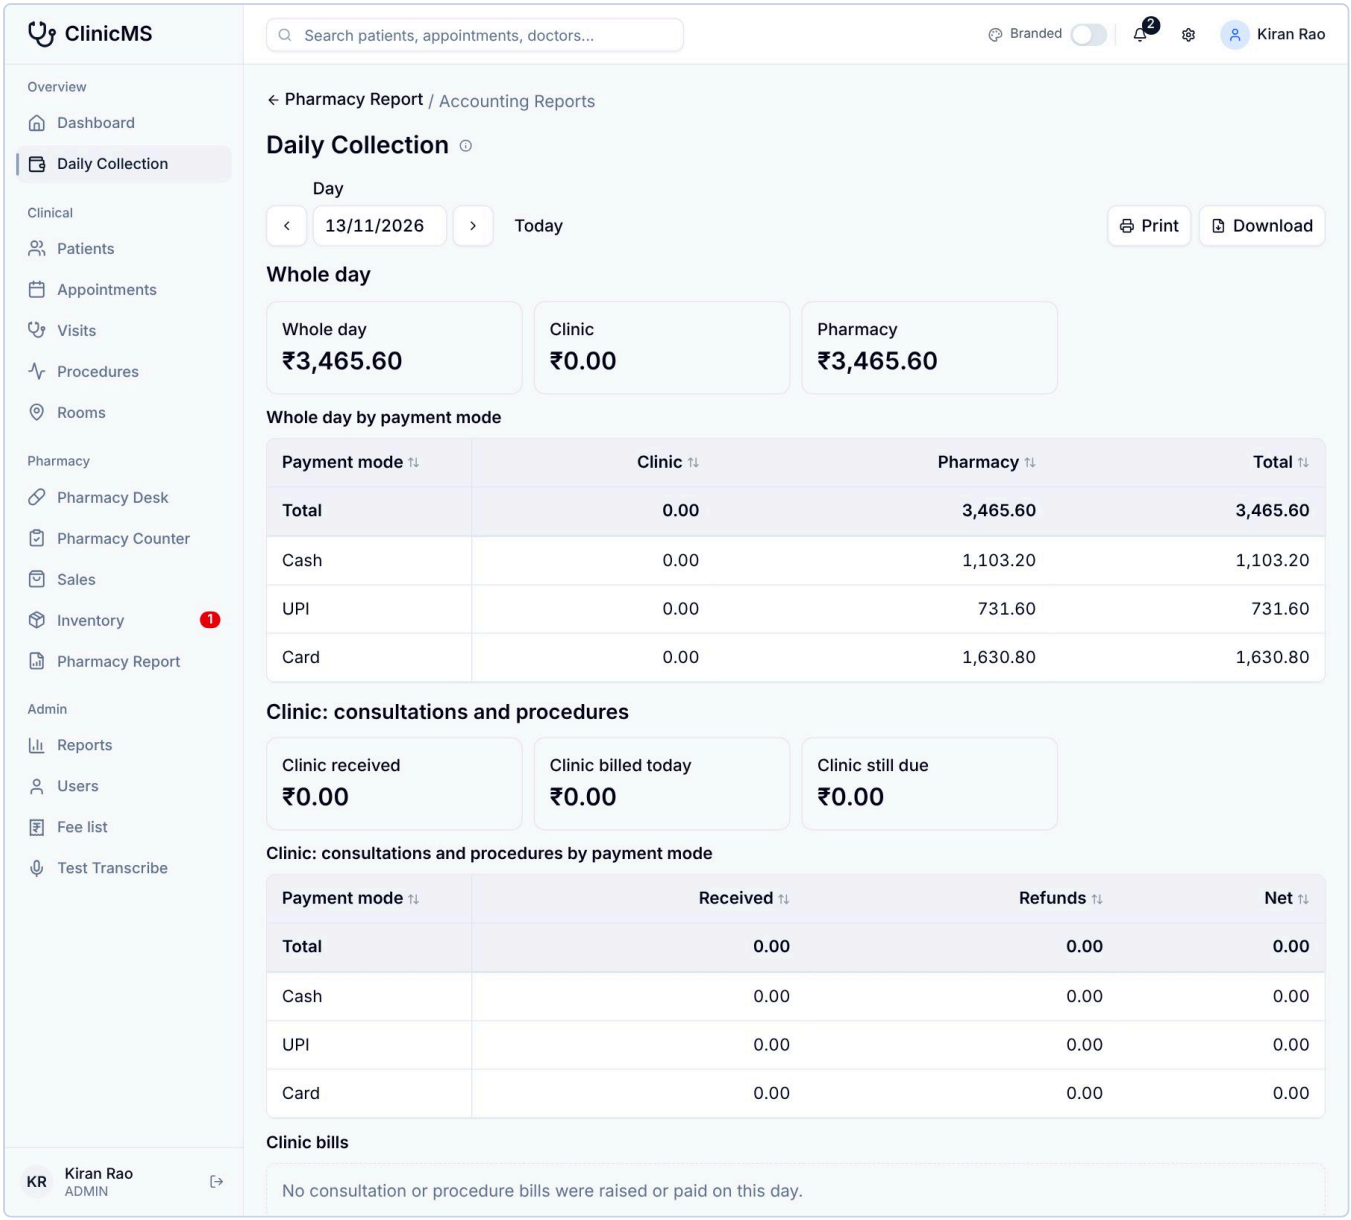

Figure 15.15. Daily Collection for a past day, before counting.

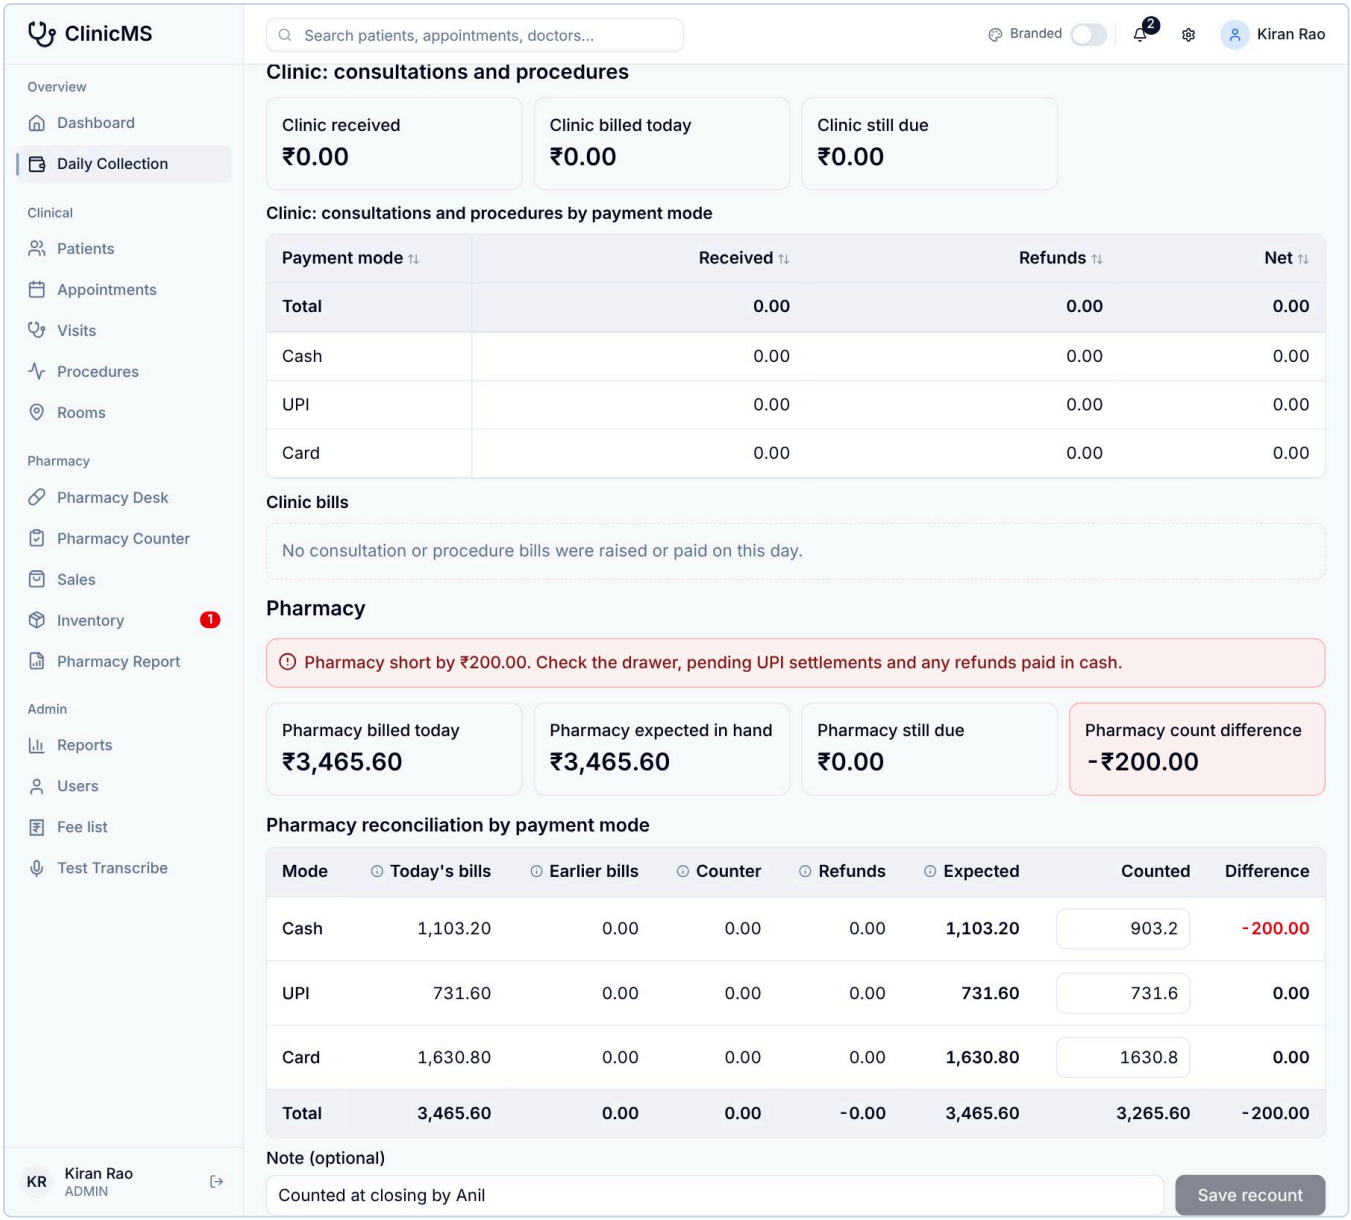

Figure 15.16. Counts entered and saved: the cash drawer is ₹200 short.

ON THE SCREEN	WHAT IT MEANS
Whole day	Clinic receipts less refunds, plus what the pharmacy should have in hand. Split into **Clinic** and **Pharmacy**.
Clinic received	Payments received today on clinic bills, whatever day the bill is from, less refunds.
Clinic billed today, Clinic still due	Clinic bills made today, and what is still unpaid at the end of the day (yellow when anything is due).
Pharmacy billed today, expected in hand, still due	The pharmacy's bills today, the money that should be in hand, and what customers still owe.
Pharmacy count difference	The saved count less what was expected. Red when short.
Whole day by payment mode	Clinic and pharmacy money side by side for each mode.

Clinic bills	The consultation and procedure bills paid that day.
On today's bills	Payments received today on pharmacy bills dated today.
On earlier bills	Payments received today on older bills (balances settled today).
Counter sales	Counter sales paid today. Counter sales on credit move no money.
Refunds	Money handed back in this mode today.
Expected	On today's bills + On earlier bills + Counter sales − Refunds: what should be in hand.
Counted, Difference	What you counted, and Counted − Expected.
Yellow line: not counted yet	Nobody has counted the pharmacy for this day.
Green line: balanced	The count matches what the app expected.
Red line: short	Less money than expected. Check the drawer, pending UPI settlements and any refunds paid in cash.
Yellow line: over	More money than expected. Look for a payment taken without a bill, or a bill not yet confirmed.

Below the count, tables list the day's payments by mode and the bills behind them. Print and Download work as on the other reports.

> **TAKE CARE**
> Save a count only after you have really counted. Each saved count is kept with your name and time; a recount does not erase the earlier ones.

15.15 GST Summary & Monthly P&L

WHO USES THIS Owners, accountants

Two summaries on one page. **GST Summary** totals input GST (on purchases) and output GST (on sales) for a **Start date** to **End date**, with **Net payable** and the split by GST slab. **Monthly** reports pick a **Month** and show **Procurement**, **Sales**, **Gross profit**, **Stock at cost** and **Write-off**.

Each part has **Refresh** to work the figures out again, and a list of the source records behind them. **Export all source rows** downloads that list.

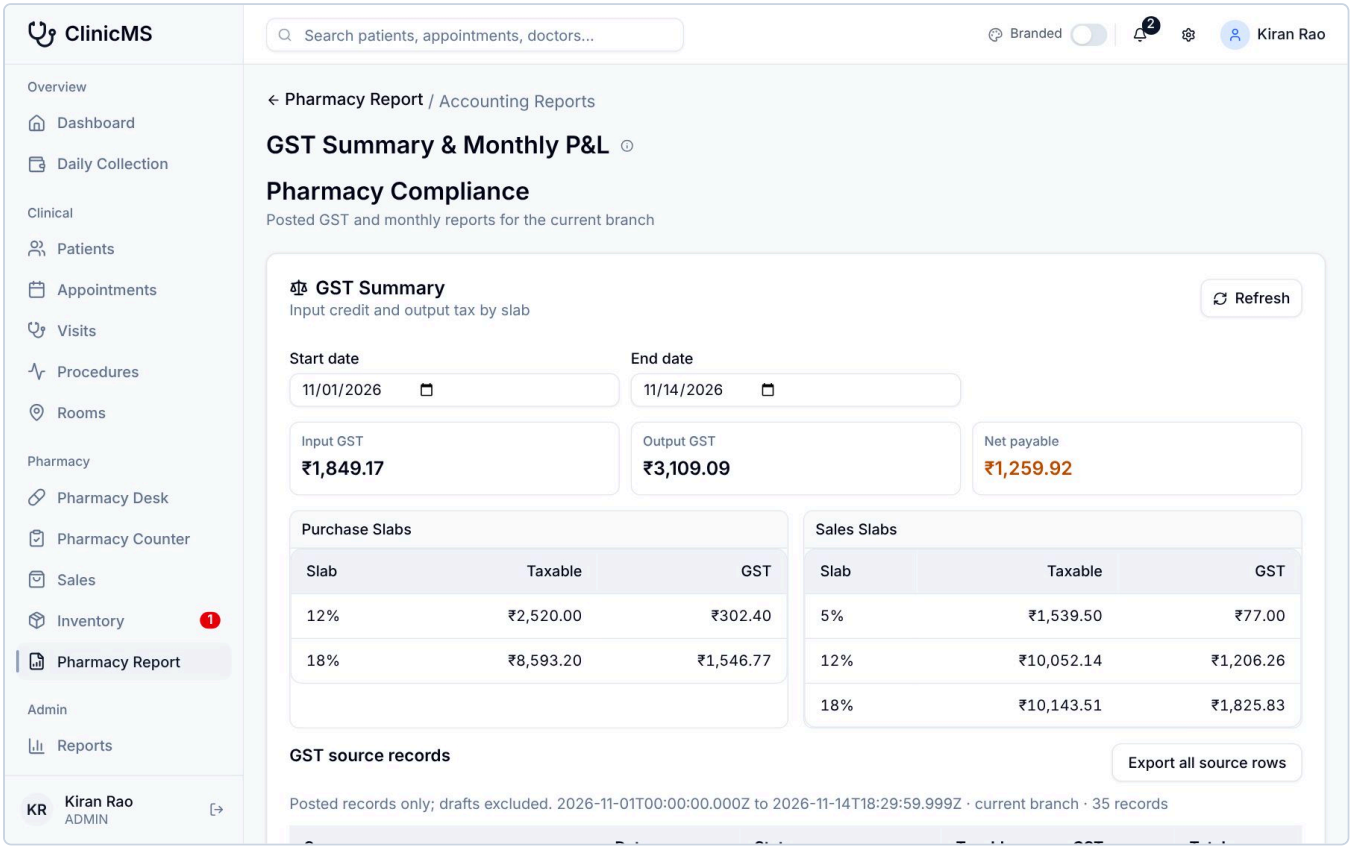

Figure 15.17. GST Summary for this month.

15.16 Daily Sales Summary – Doctorwise

WHO USES THIS Owners, doctors

Pharmacy sales by prescribing doctor, with each doctor's share. Pharmacy bills carry the prescribing doctor; counter sales carry the doctor typed on them. It opens on this month.

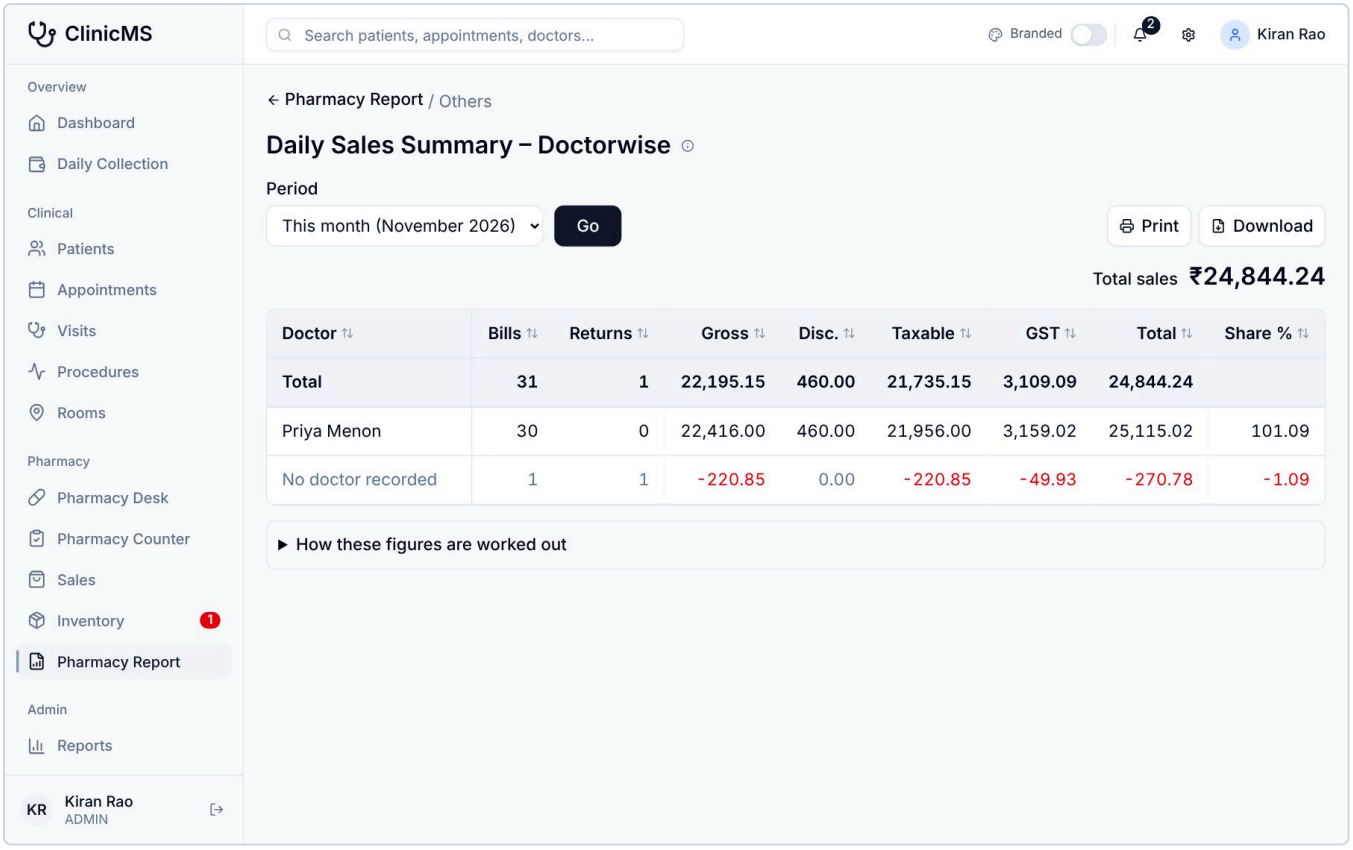

Figure 15.18. Daily Sales Summary – Doctorwise for this month.

COLUMN	MEANING
Doctor	The prescribing doctor.
Bills, Returns	How many bills and returns.
Gross, Disc., Taxable, GST, Total	As in the Sales Register.
Share %	The doctor's share of all pharmacy sales in the period.

CHAPTER 16

Reports & Analytics

Reports & Analytics gives the clinic's owners and managers the figures behind the business: money taken, patients seen, how busy each doctor and room is, stock and payments. Pick a report, choose the dates, and the app adds up the records for you. Pharmacy GST and stock reports are in a separate chapter, Pharmacy Report.

16.1 Open Reports & Analytics

WHO USES THIS Admins, owners and managers

Open **Reports** from the Admin part of the menu. The page has four parts, from top to bottom.

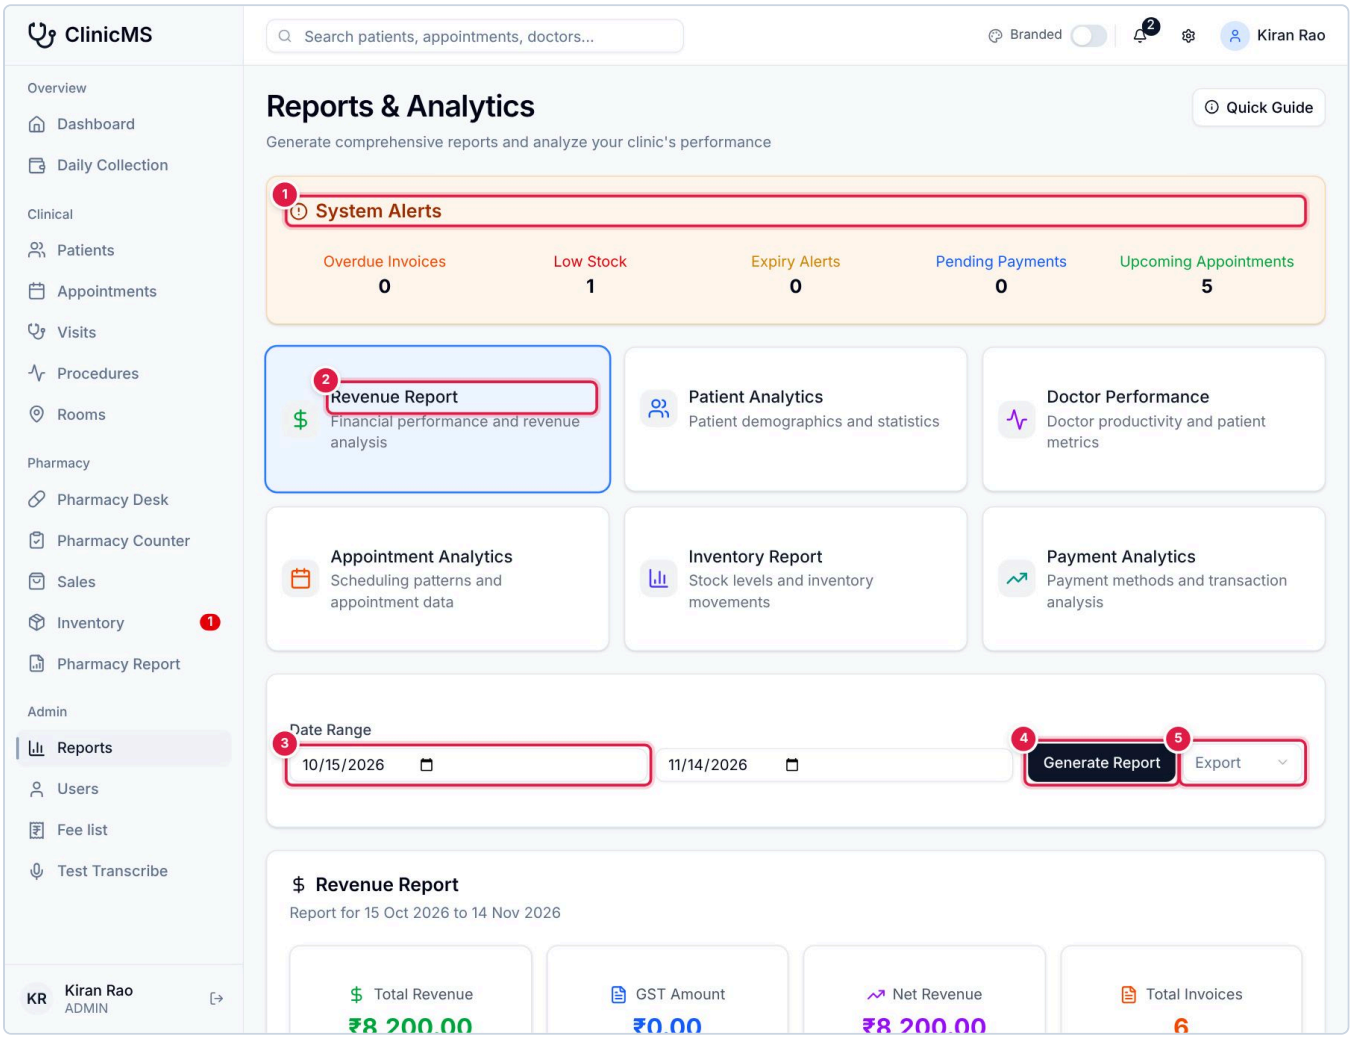

Figure 16.1. Reports & Analytics before a report is generated.

ON THE SCREEN	WHAT IT MEANS
1. System Alerts	Five counts of things that need attention. See the next section.
2. Report cards	The six reports. Click a card to choose it. The chosen card has a blue frame.
3. Date Range	The first and last day the report covers. It starts on the last 30 days.
4. Generate Report	Works out the chosen report for the dates. It says **Generating...** while it works.
5. Export	Downloads the report as a file.
Quick Guide	The button at the top right. A short summary of this page.

16.2 Read the System Alerts strip

WHO USES THIS Admins, owners and managers

The orange strip at the top counts what needs attention today. It does not change with the date range.

Figure 16.2. The System Alerts strip.

ON THE SCREEN	WHAT IT MEANS
Overdue Invoices	Clinic bills past their due date and still unpaid.
Low Stock	Medicines whose stock has run out (0 left).
Expiry Alerts	Medicines that expire within the next 30 days.
Pending Payments	Card or online payments not yet matched with the bank.
Upcoming Appointments	Appointments in the next 48 hours that are not cancelled.

16.3 Generate a report

WHO USES THIS Admins, owners and managers

Every time you change the card or the dates, click **Generate Report** again. Until you do, the box at the bottom says *Report data will be displayed here*. If nothing happened in those dates it says *No data available for the selected period*.

1. Click the card of the report you want, for example **Revenue Report**.

2. Set the first day in the left date box and the last day in the right date box.
3. Click **Generate Report**.
4. Read the report in the box at the bottom. Its title is the report's name and the line under it says which dates it covers.

REPORT	WHAT IT IS FOR
Revenue Report	Money received for consultations and procedures: totals, payment modes and the doctors who brought in the most.
Patient Analytics	How many patients, new or returning, their ages and gender, and who visits most.
Doctor Performance	Each doctor's appointments, how many were completed, and the revenue.
Appointment Analytics	How many appointments, how many were completed, cancelled or missed, the busiest hours and how much each room is used.
Inventory Report	The value of the stock, the best-selling items and the items running low.
Payment Analytics	Payments by mode and whether they have been matched with the bank.

16.4 Revenue Report

WHO USES THIS Admins, owners and managers

Use the Revenue Report at the end of a month, or before a meeting with your accountant, to see what the clinic billed for consultations and procedures. Pharmacy sales are not included; they are in the Pharmacy Report.

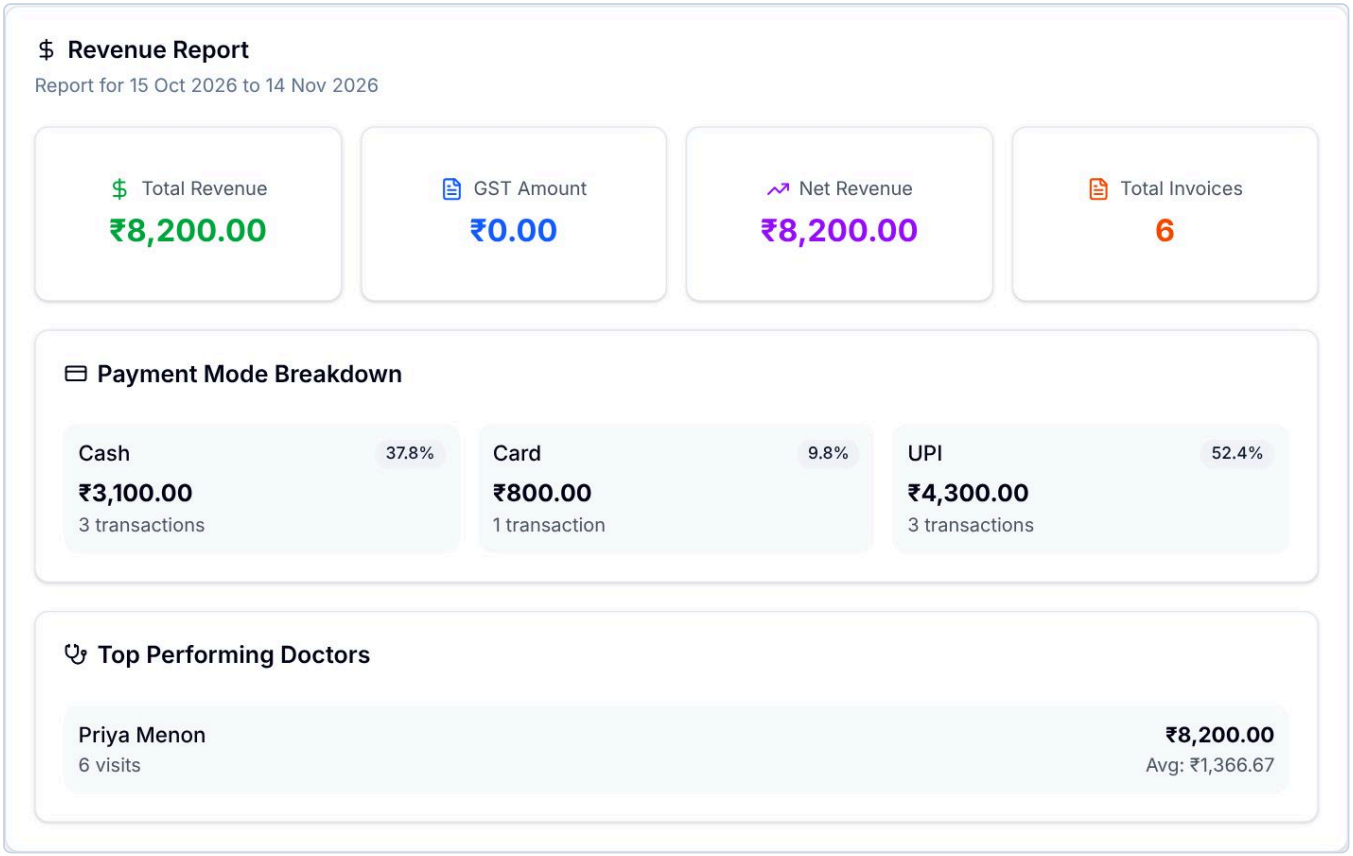

Figure 16.3. A Revenue Report for the last 30 days.

ON THE SCREEN	WHAT IT MEANS
Total Revenue	Money received on clinic bills in the dates, GST included. Unpaid balances are not counted.
GST Amount	The GST on those bills. Consultations and procedures are billed without GST, so this is usually ₹0.
Net Revenue	Total Revenue less GST.
Total Invoices	How many payments make up that total.
Payment Mode Breakdown	How much was paid by each mode (cash, UPI, card and so on), with the share of the total.
Top Performing Doctors	The doctors whose patients paid the most, with their number of visits and the average per visit.

16.5 Patient Analytics

WHO USES THIS Admins, owners and managers

Use Patient Analytics to see how many patients the clinic is seeing and who comes back.

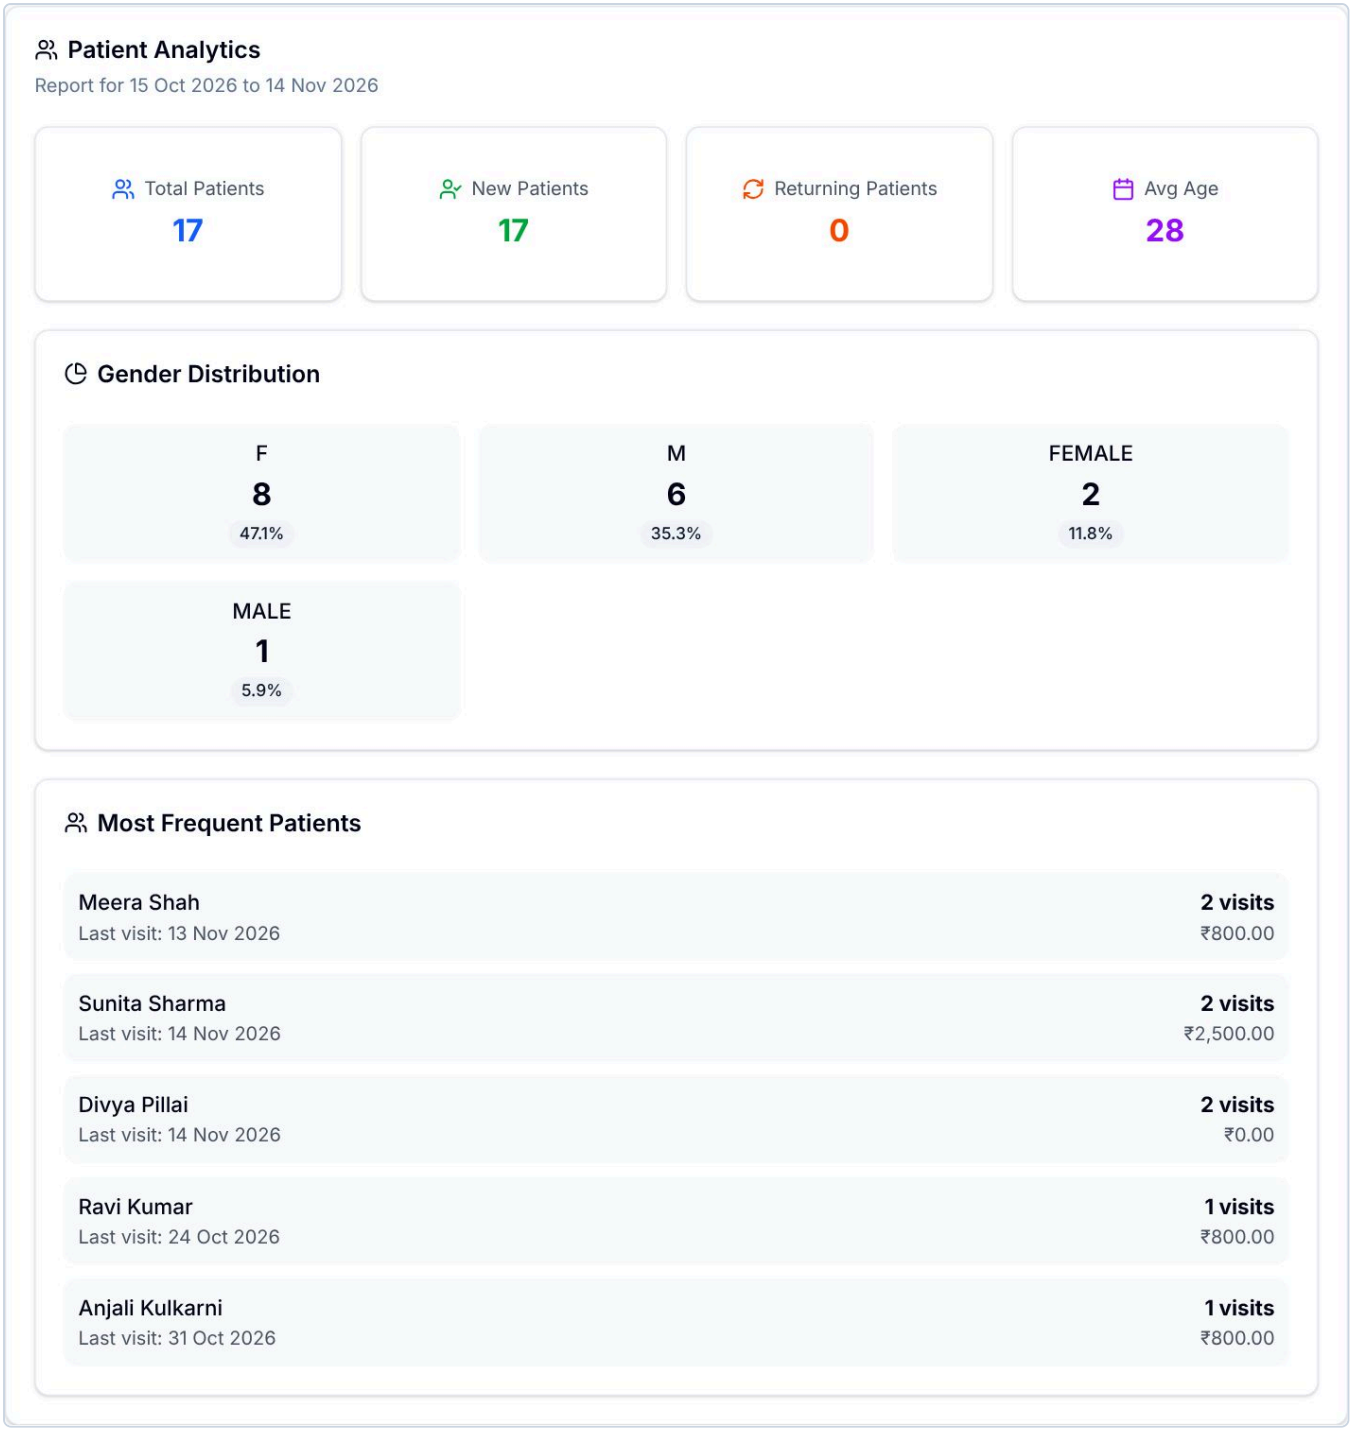

Figure 16.4. Patient Analytics.

ON THE SCREEN	WHAT IT MEANS
Total Patients	Patients seen in the dates.
New Patients	Patients registered in the dates.
Returning Patients	Patients who had visited before.
Avg Age	The average age of the patients.
Gender Distribution	How many patients are of each gender, with the share of the total.

Most Frequent Patients	The patients with the most visits, with their last visit date and what they have spent.

16.6 Doctor Performance

WHO USES THIS Admins, owners and managers

Use Doctor Performance to compare how busy each doctor is and how many of their appointments end in a completed visit.

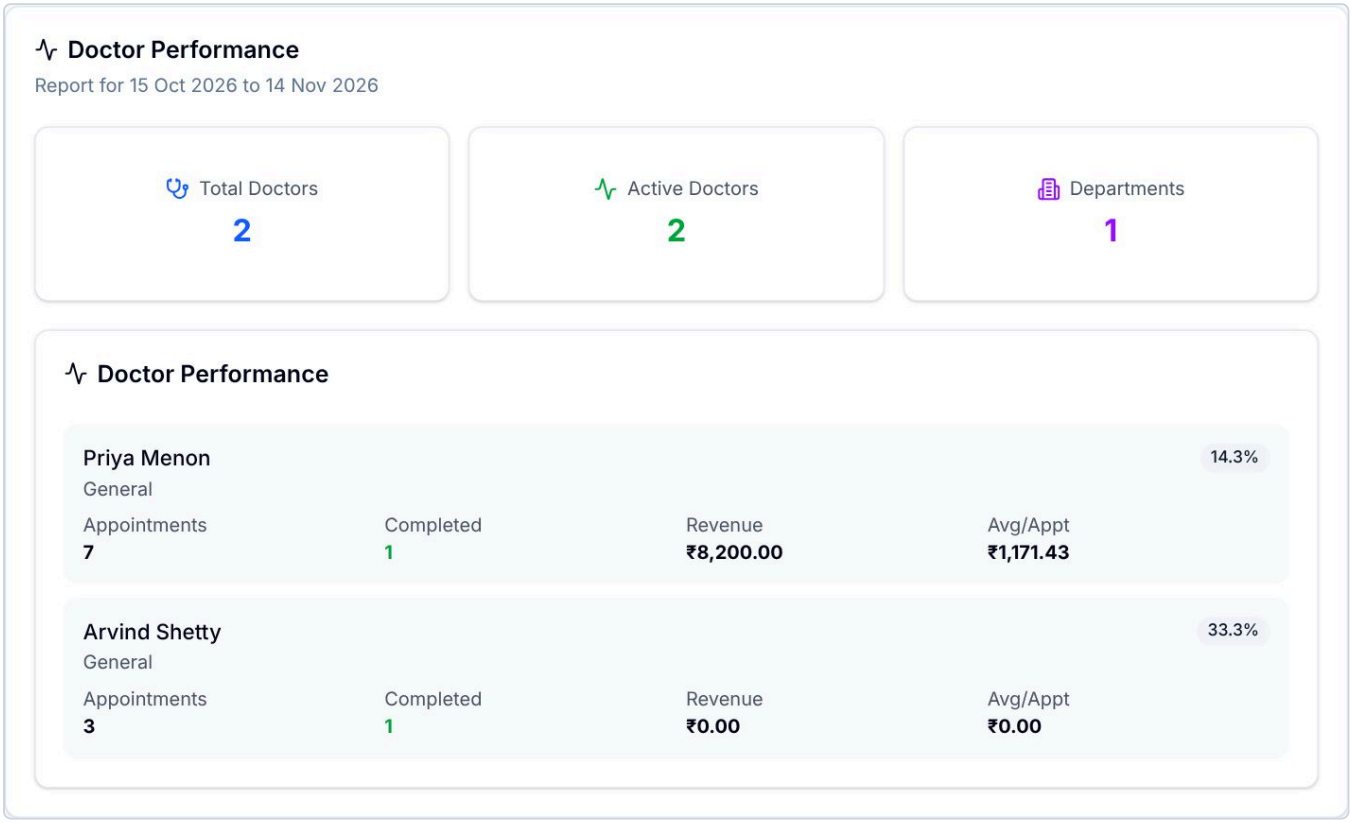

Figure 16.5. Doctor Performance.

ON THE SCREEN	WHAT IT MEANS
Total Doctors, Active Doctors, Departments	The counts at the top.
Percentage beside the name	The doctor's completion rate: completed appointments as a share of all their appointments.
Appointments, Completed	The doctor's appointments in the dates, and how many were completed.
Revenue, Avg/Appt	What the doctor's patients were billed, in total and per appointment.

16.7 Appointment Analytics

WHO USES THIS Admins, owners and managers

Use Appointment Analytics to plan staff and rooms: it shows the busiest hours and which rooms are used most.

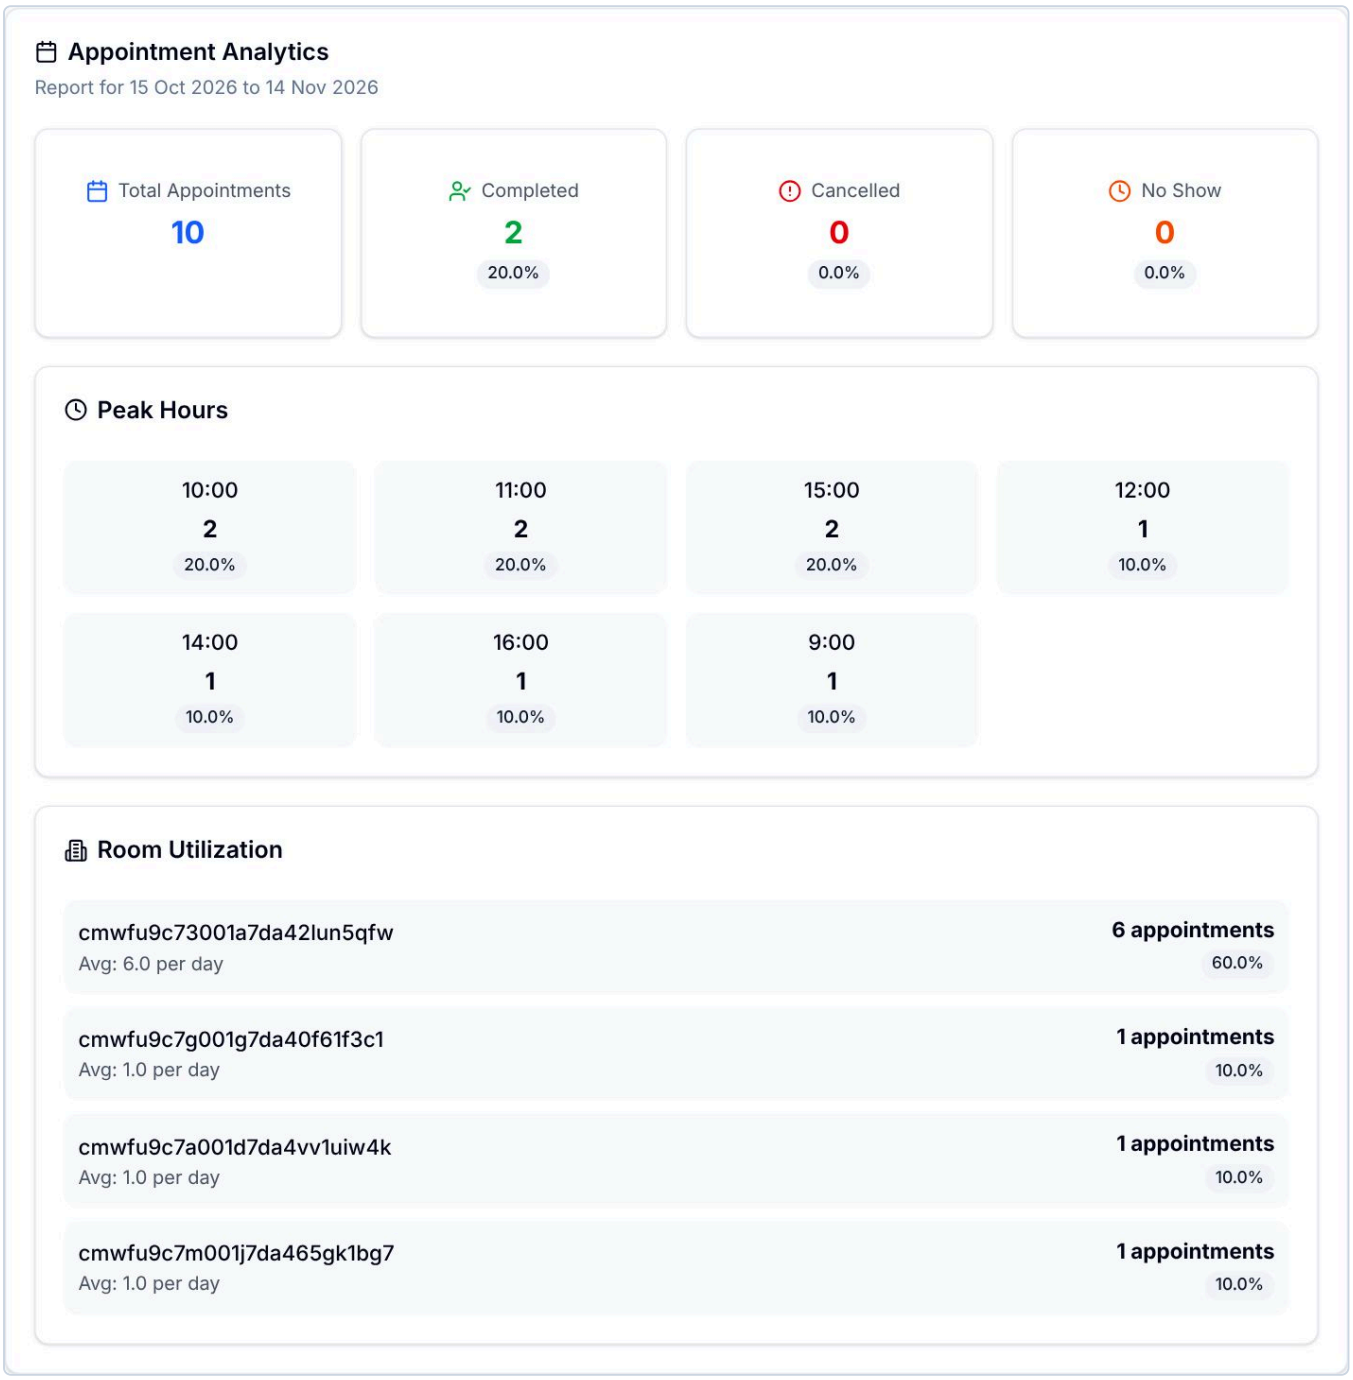

Figure 16.6. Appointment Analytics.

ON THE SCREEN	WHAT IT MEANS
Total Appointments, Completed, Cancelled, No Show	Counts for the dates. No Show means the patient did not come.
Peak Hours	The hours of the day with the most appointments.
Room Utilization	For each room: the average appointments per day, the total, and its share of all appointments. Rooms are listed by the app's internal room code, not by name.

16.8 Inventory Report

WHO USES THIS Admins, owners and managers

Use the Inventory Report to see the value of the stock and what needs ordering. For batch-by-batch expiry, use Expiring Stock in the Pharmacy Report.

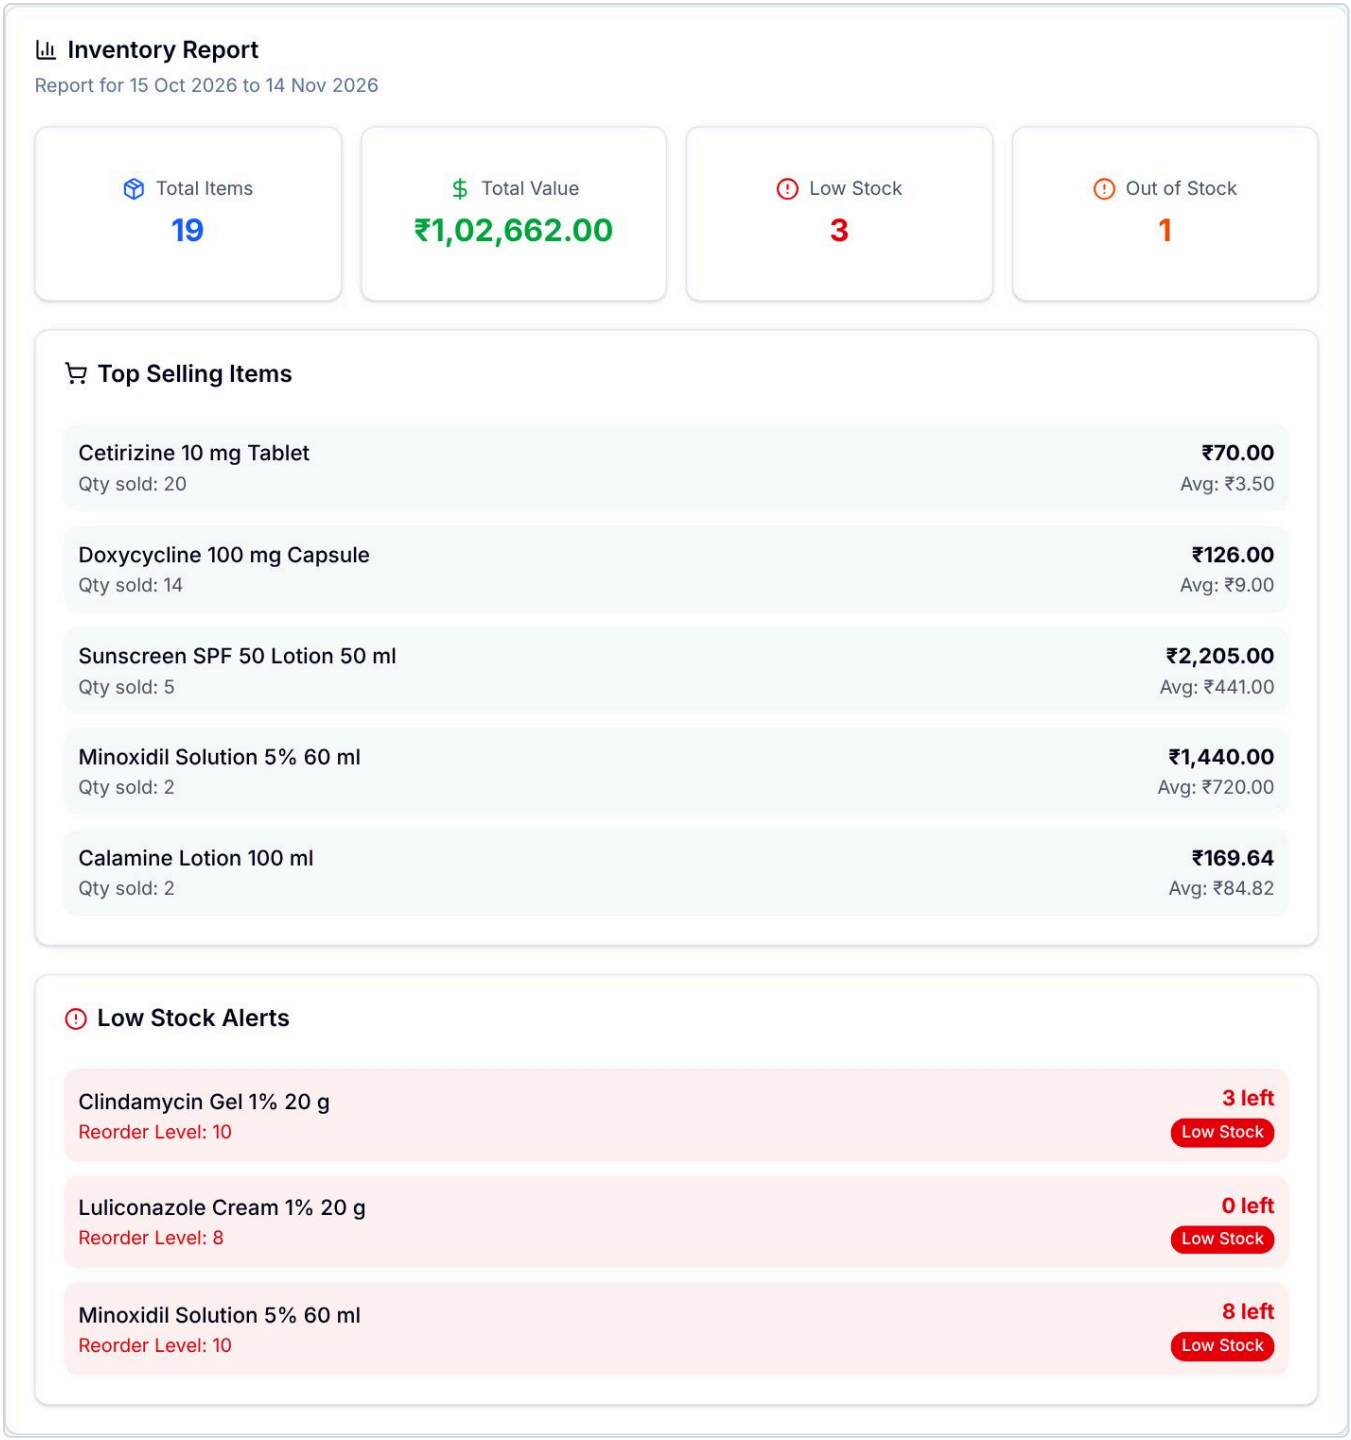

Figure 16.7. The Inventory Report.

ON THE SCREEN	WHAT IT MEANS
Total Items, Total Value, Low Stock, Out of Stock	How many items are in stock, what they are worth, and how many are low or finished.
Top Selling Items	Shown when there were sales in the dates: the items sold most, with the average selling price.
Low Stock Alerts	Each item at or below its reorder level, with the reorder level and how many are left.

16.9 Payment Analytics

WHO USES THIS Admins, owners and managers

Use Payment Analytics to check that every payment taken at the desk has reached the bank.

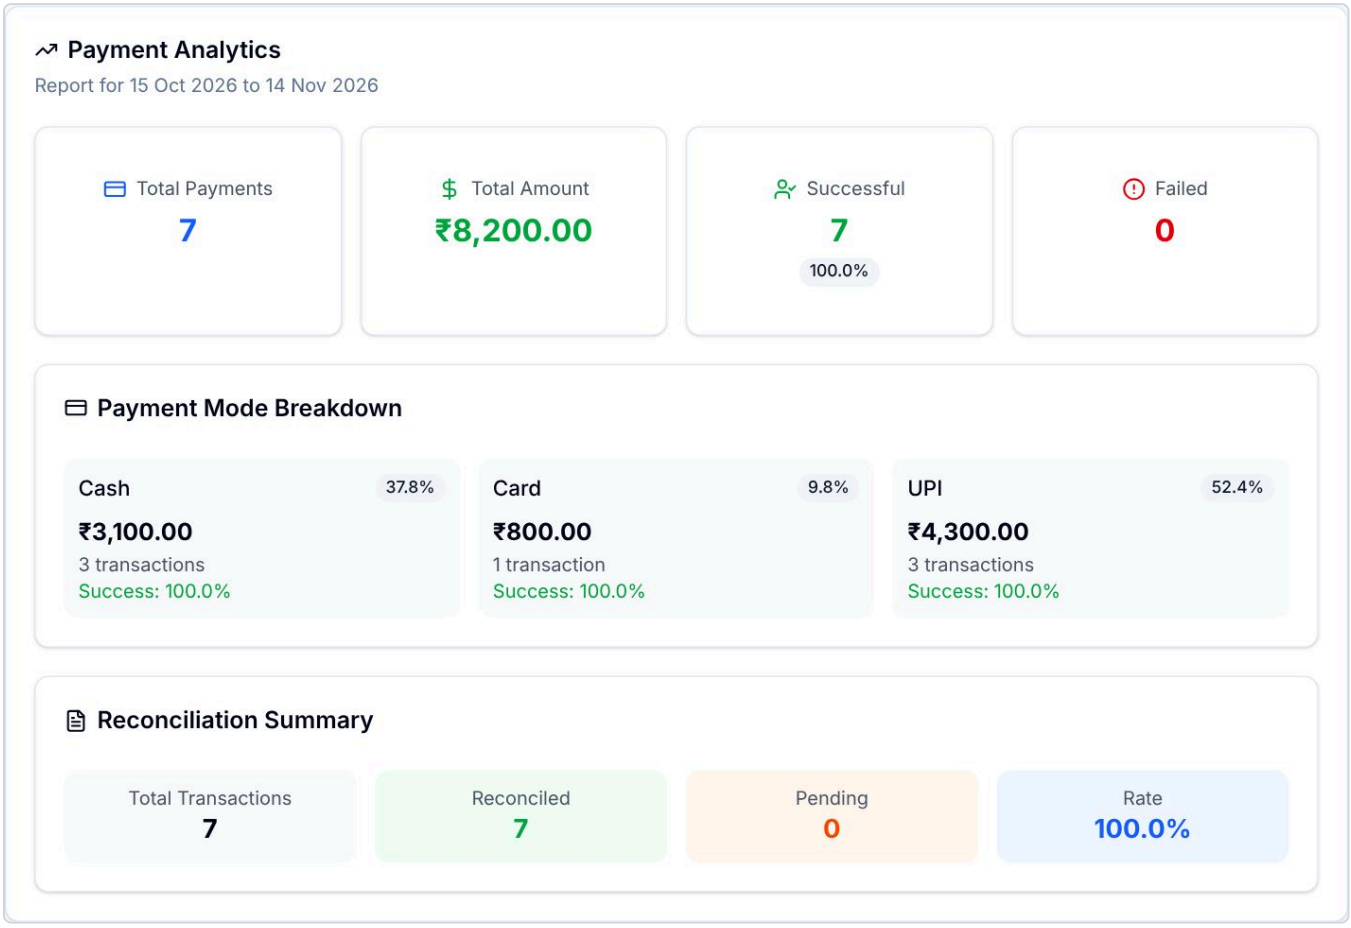

Figure 16.8. Payment Analytics.

ON THE SCREEN	WHAT IT MEANS
Total Payments, Successful, Failed, Pending	How many payments there were and how they ended.
Payment Mode Breakdown	The amount taken by each payment mode.
Reconciliation Summary	**Total Transactions**, how many are **Reconciled** (matched with the bank), how many are **Pending**, and the **Rate** matched.

16.10 Export a report

WHO USES THIS Admins, owners and managers

Export a report to send it to your accountant or keep it with the clinic's records. The file covers the chosen card and dates.

1. Choose the report card and the dates.

2 Click **Export** and choose a format. The file downloads to your computer.

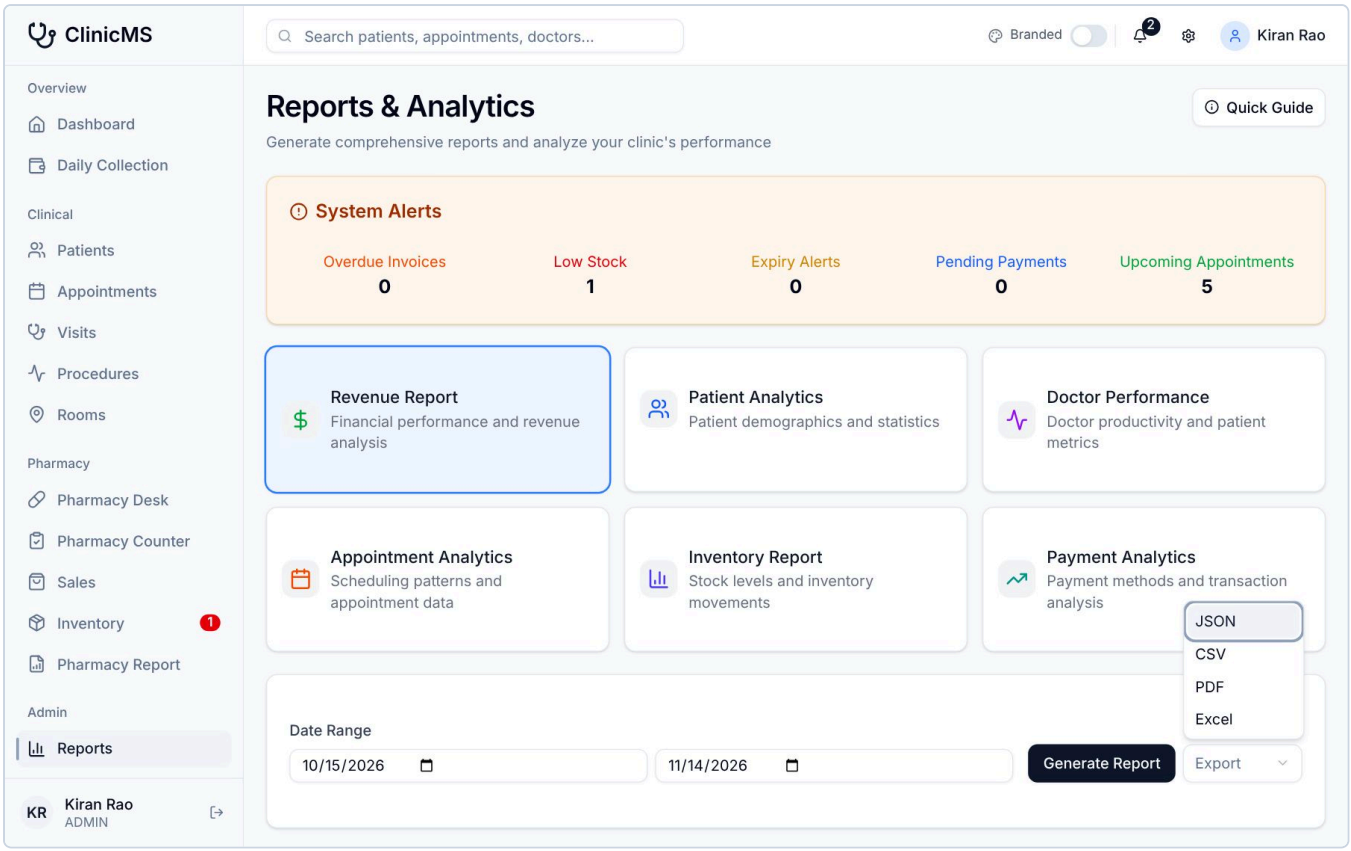

Figure 16.9. The Export formats.

FORMAT	USE IT FOR
PDF	Printing or emailing. Laid out for paper.
Excel	Opening in Microsoft Excel or Google Sheets to work with the figures.
CSV	Opening in any spreadsheet or accounting program.
JSON	Only when your system administrator asks for it.

CHAPTER 17

Users

The Users page is where admins and owners manage the clinic's staff accounts: who can sign in, what role they have, and what they are allowed to do. It also holds each doctor's working hours and WhatsApp settings, and the clinic's holidays. Managers can open the page and see the list, but only admins and owners can change accounts.

17.1 Find your way around the Users page

WHO USES THIS Admins and owners

Open **Users** from the Admin part of the menu. The table lists every staff account in the clinic, with buttons for each one on the right.

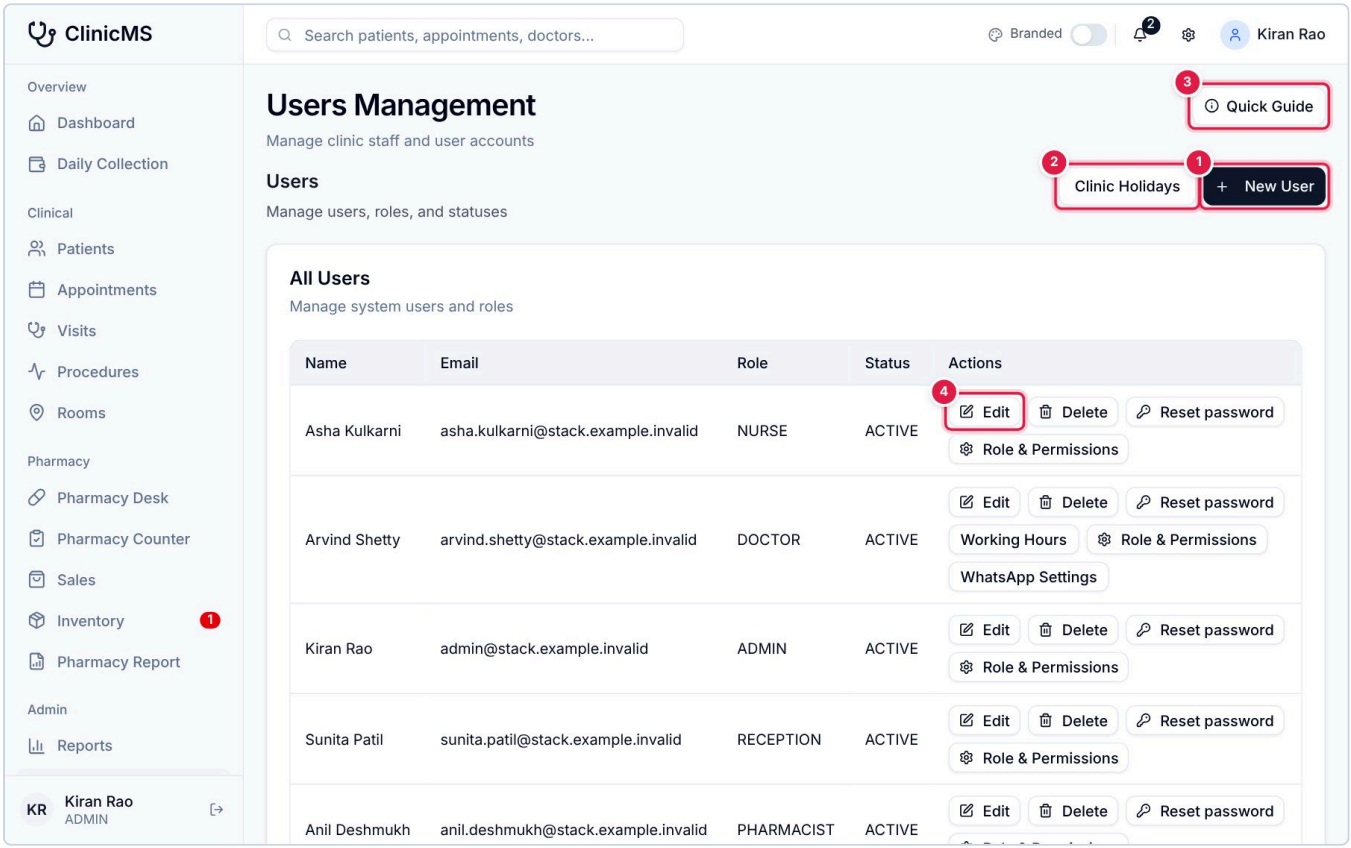

Figure 17.1. The Users page.

ON THE SCREEN	WHAT IT MEANS
1. New User	Creates a staff account.
2. Clinic Holidays	Days the whole clinic is closed.
3. Quick Guide	A short summary of this page.

4. Row buttons	**Edit**, **Delete**, **Reset password** and **Role & Permissions** on every row. Doctors' rows also have **Working Hours** and **WhatsApp Settings**.
Name, Email	The person's name and the email address they can sign in with.
Role	What kind of work they do. It decides which pages they see. See *What each role can do* below.
Status	Whether they can sign in. See *Account statuses* below.

17.2 Add a new member of staff

WHO USES THIS Admins and owners

Create an account for each person who joins, so everyone signs in as themselves. Never share one account between two people: the app records who did what.

1. Click **New User**. The **Create User** window opens.
2. Type the **First Name** and **Last Name**.
3. Type their **Email** and mobile number in **Phone**. They can sign in with either. The phone number is required.
4. Choose the **Role**. The window starts on Receptionist.
5. Leave **Status** on **Active** so they can sign in.
6. Type a starting password of 8 to 20 characters in **Password**. Tell it to the person privately.
7. Click **Create**. The window closes and the new person appears in the table.

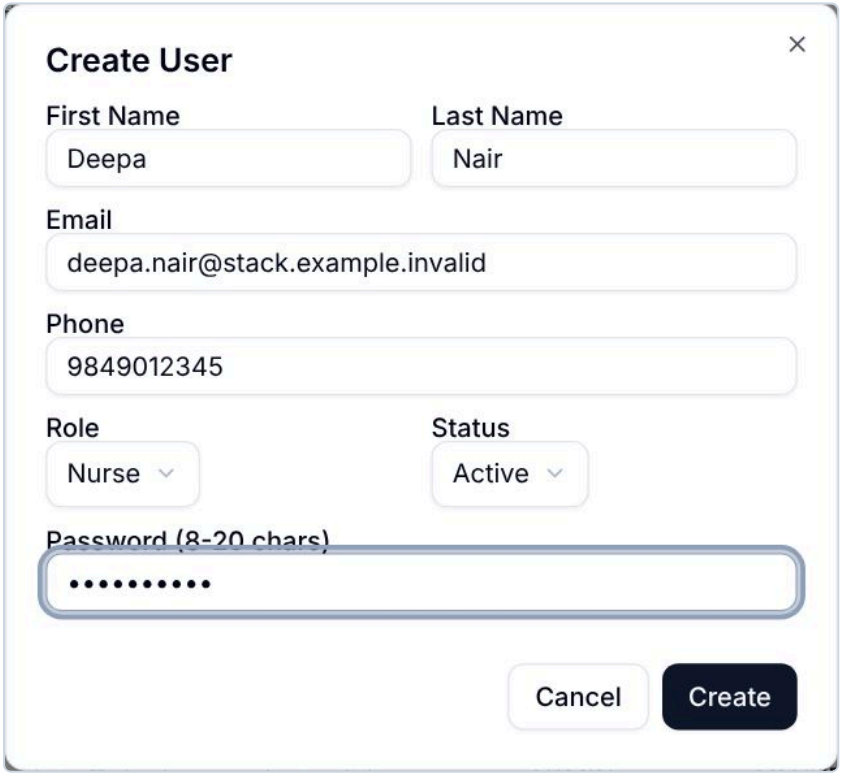

Figure 17.2. The Create User window filled in for a new nurse.

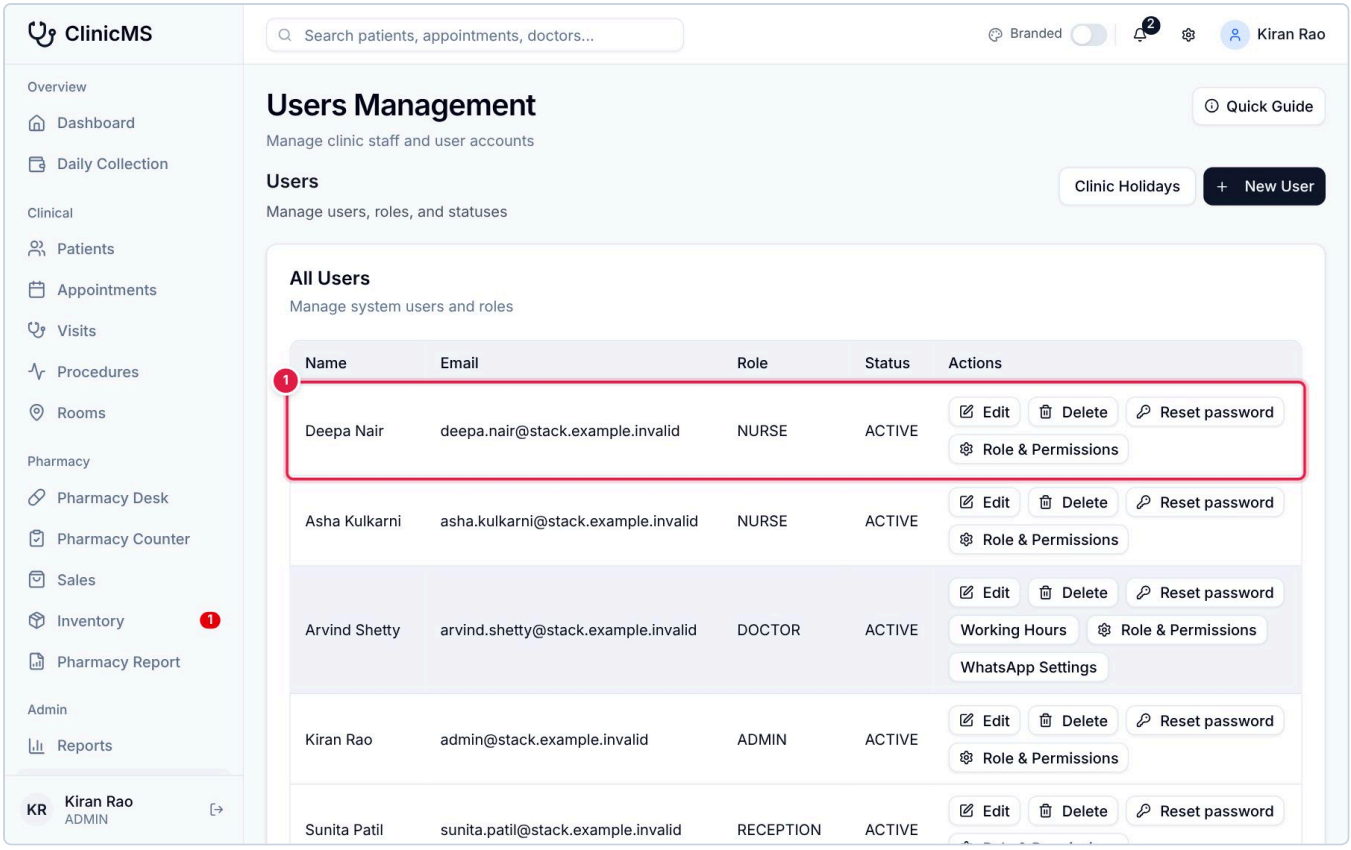

Figure 17.3. Deepa Nair now has an account with the NURSE role.

ROLE IN THE LIST	WHO IT IS FOR
Admin	Runs the clinic system. Sees every page.
Doctor	Sees patients, writes visits and prescriptions, and has the pharmacy screens.
Nurse	Records patients, appointments, vitals and room use.
Receptionist	Front desk: patients, appointments, rooms, and pharmacy billing.
Manager	Runs the clinic day to day: reports, users, stock, appointments.
Pharmacist	Pharmacy billing, stock and pharmacy reports.

The Owner role cannot be given from this window. The clinic's owner account is set up when the clinic is first installed.

> **TIP**
> If you see *Phone number is required* or *Password must be 8-20 characters*, fix that field and click **Create** again.

17.3 Change someone's details or status

WHO USES THIS Admins and owners

Use **Edit** when someone changes their phone number or email, moves to a different job, or leaves. The window is the same as for a new user, without the password box. Passwords are changed with a reset code, described next.

1. Click **Edit** on the person's row. The **Edit User** window opens with their details.
2. Change what you need. To stop someone signing in, set **Status** to **Inactive** or **Suspended**.
3. Click **Save**.

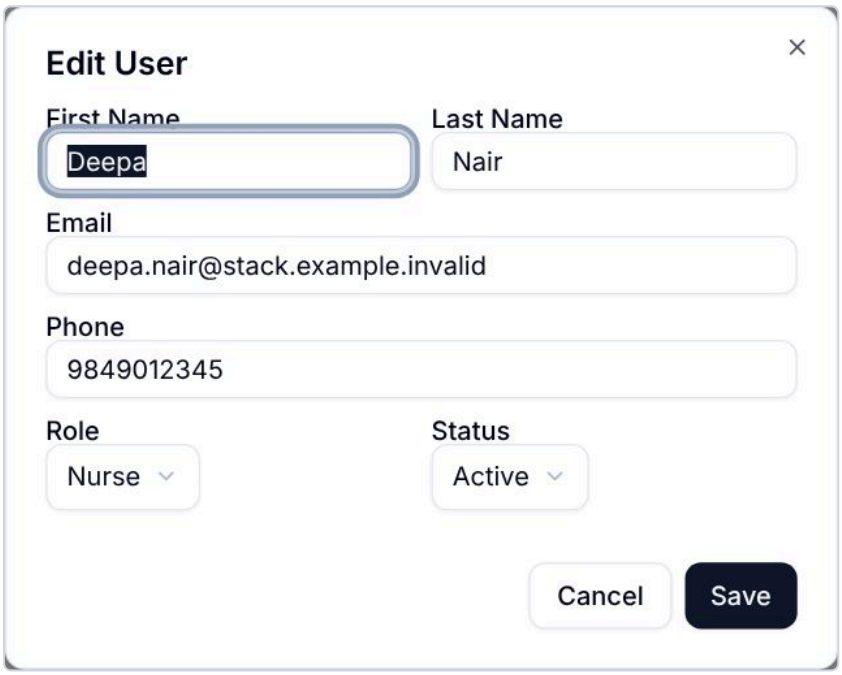

Figure 17.4. Editing an account.

STATUS	WHAT IT MEANS
ACTIVE	Can sign in and work.
INACTIVE	Cannot sign in. The sign-in page says *Account disabled*. Use it when someone leaves; their past work stays on record.
SUSPENDED	Cannot sign in. The sign-in page says *Account suspended*. Use it to block an account for a while.
PENDING	Cannot sign in yet. Use it for someone who has not started.

17.4 Give someone a password reset code

WHO USES THIS Admins and owners

The app never emails passwords or reset links. When someone forgets their password, you make them a one-time reset code, and they choose a new password with it. You never see their new password.

Make a code only after you have checked in person, or on a call you are sure of, that the person is asking. Anyone with the code can take over the account. You can make a code for staff at your level or below. Only an owner can make one for an owner.

1. Click **Reset password** on the person's row.
2. Read the warning, then click **I have confirmed who is asking. Create code**.
3. Give the 8-character code to the person. Click **Copy code** if you want to paste it into a message to them. The code is shown only once, works once and expires after 24 hours. Making another code cancels the first one.
4. The person opens the sign-in page, clicks **enter your reset code**, and types the code in **Reset code**.
5. They type a new password of at least 8 characters in **New password** and again in **Confirm new password**, then click **Set new password**.
6. The page says *Password updated* and opens the sign-in page. They sign in with the new password.

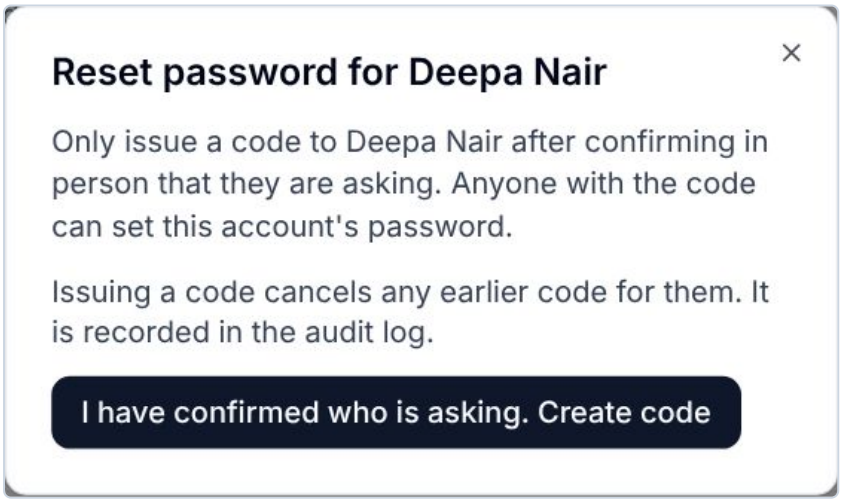

Figure 17.5. Step 1: confirm who is asking.

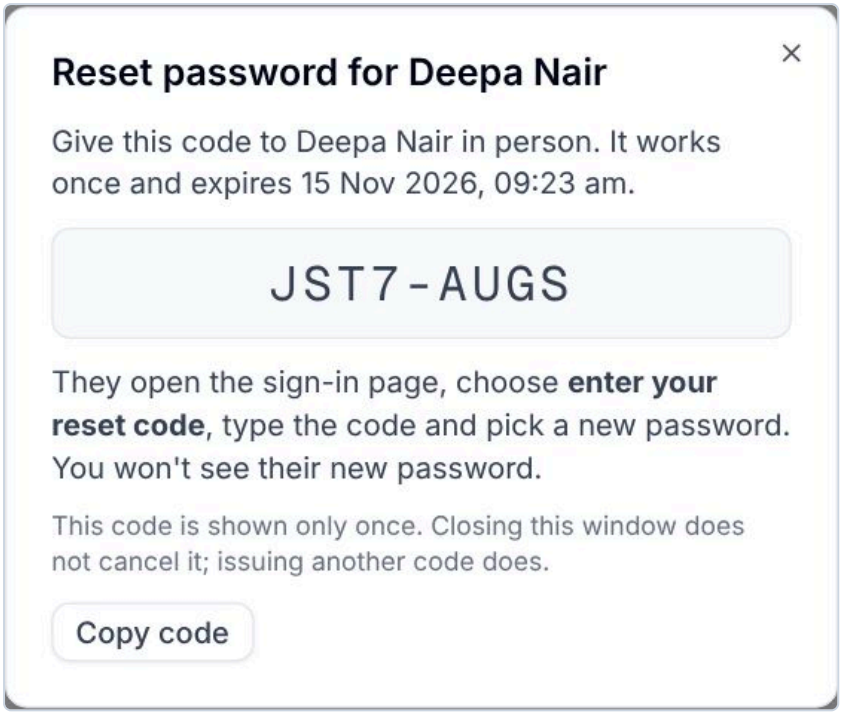

Figure 17.6. Step 2: the one-time code to give the person.

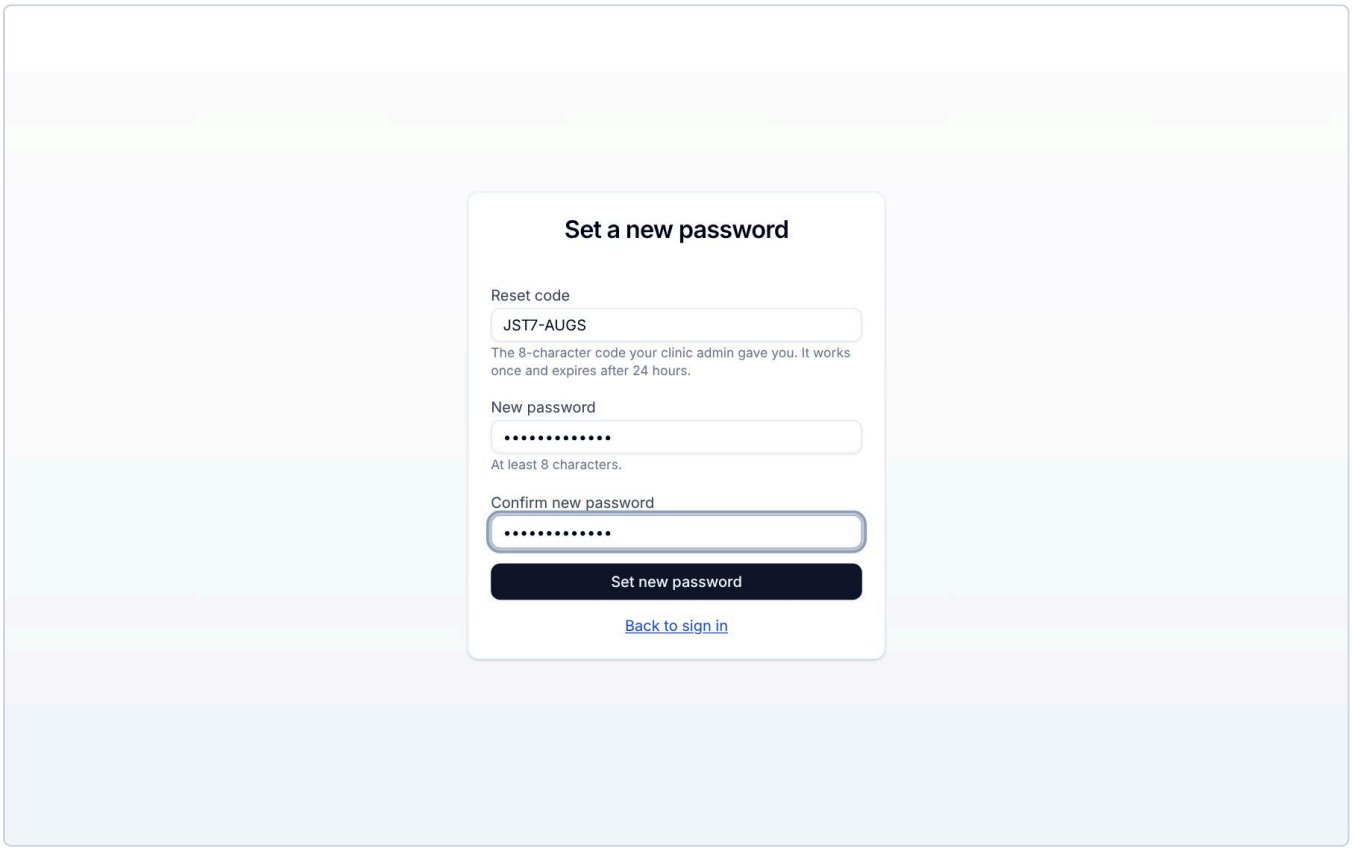

Figure 17.7. Step 3: the person sets a new password with the code.

> **TIP**
> If the person's code says it is wrong or expired, make a new one. Each new code replaces the last.

17.5 Change a role or permissions

WHO USES THIS Admins and owners

Role & Permissions changes what someone can do. The role on the left sets the pages in their menu. The list on the right holds individual permissions, grouped by area, for finer control.

1. Click **Role & Permissions** on the person's row.
2. To change the role, choose it in **Role** and click **Apply Role**. A message confirms the change, and the permissions list is reset to that role's usual permissions.
3. To fine-tune, tick or untick permissions on the right. **Select all** and **Clear** work on one group; **Clear All** unticks everything. **Selected** shows how many are ticked.
4. Click **Save Permissions**. A message confirms the change.

Figure 17.8. The Role & Permissions window.

> TAKE CARE
> If the list on the right is empty and **Selected** shows 0, do not click **Save Permissions**: that would save the person with no permissions. Change the role with **Apply Role** instead, and ask your system administrator about the empty list.

17.6 What each role can do

WHO USES THIS Admins and owners

The role decides which pages appear in the person's menu. Pages they cannot use are hidden, and the app refuses the action if they reach it another way.

ROLE	PAGES IN THE MENU
Admin	Every page: Dashboard, Daily Collection, Patients, Appointments, Visits, Procedures, Rooms, Pharmacy Desk, Pharmacy Counter, Sales, Inventory, Pharmacy Report, Reports, Users, Fee list and Test Transcribe. Can make database backups.
Owner	The same as Admin, except the Pharmacy Desk and Pharmacy Counter.
Manager	Dashboard, Daily Collection, Patients, Appointments, Visits, Procedures, Inventory, Pharmacy Report, Reports and Users. Not the Fee list, Rooms or the pharmacy billing screens.
Doctor	Dashboard, Daily Collection, Patients, Appointments, Visits, Procedures, Rooms, Pharmacy Desk, Pharmacy Counter, Sales, Inventory, Pharmacy Report and Test Transcribe.
Nurse	Dashboard, Patients, Appointments, Visits and Rooms.
Receptionist	Dashboard, Patients, Appointments, Rooms, Pharmacy Desk, Pharmacy Counter and Inventory.
Pharmacist	Dashboard, Daily Collection, Pharmacy Desk, Pharmacy Counter, Sales, Inventory and Pharmacy Report.

17.7 Set a doctor's working hours, leave and overbooking

WHO USES THIS Admins and owners

Each doctor's row has **Working Hours**. The appointment calendar uses these hours to show when the doctor is free. Doctors can set their own hours in My Settings (see Getting started); this button lets an admin do it for them.

1. Click **Working Hours** on the doctor's row. The **Availability** window opens.
2. Under **Weekly working hours (IST)**, set a start and end time for each shift. Click **+ Shift** beside a day to add a second shift, for example an evening clinic. Click the bin to remove a shift. A day with no shift shows *Day off*.
3. Click **Copy Monday to Tue–Fri** to give the weekdays the same hours as Monday.
4. Click **Save hours**.
5. Under **Overbooking**, switch on **Allow overbooking** and choose up to how many patients can share one slot, then click **Save overbooking**. When it is off, each time slot takes one patient. When it is on, reception must confirm each extra patient in a slot that is already taken.
6. Under **Leave and blocked time**, choose the **Type** (**Leave** or **Blocked time**), the **From** and **To** dates, and either **All day** or a start and end time. Add a reason if you like, then click **Add leave** (or **Add blocked time**). Nobody can book the doctor during that time. Upcoming time off is listed above the form, with a bin to remove it.

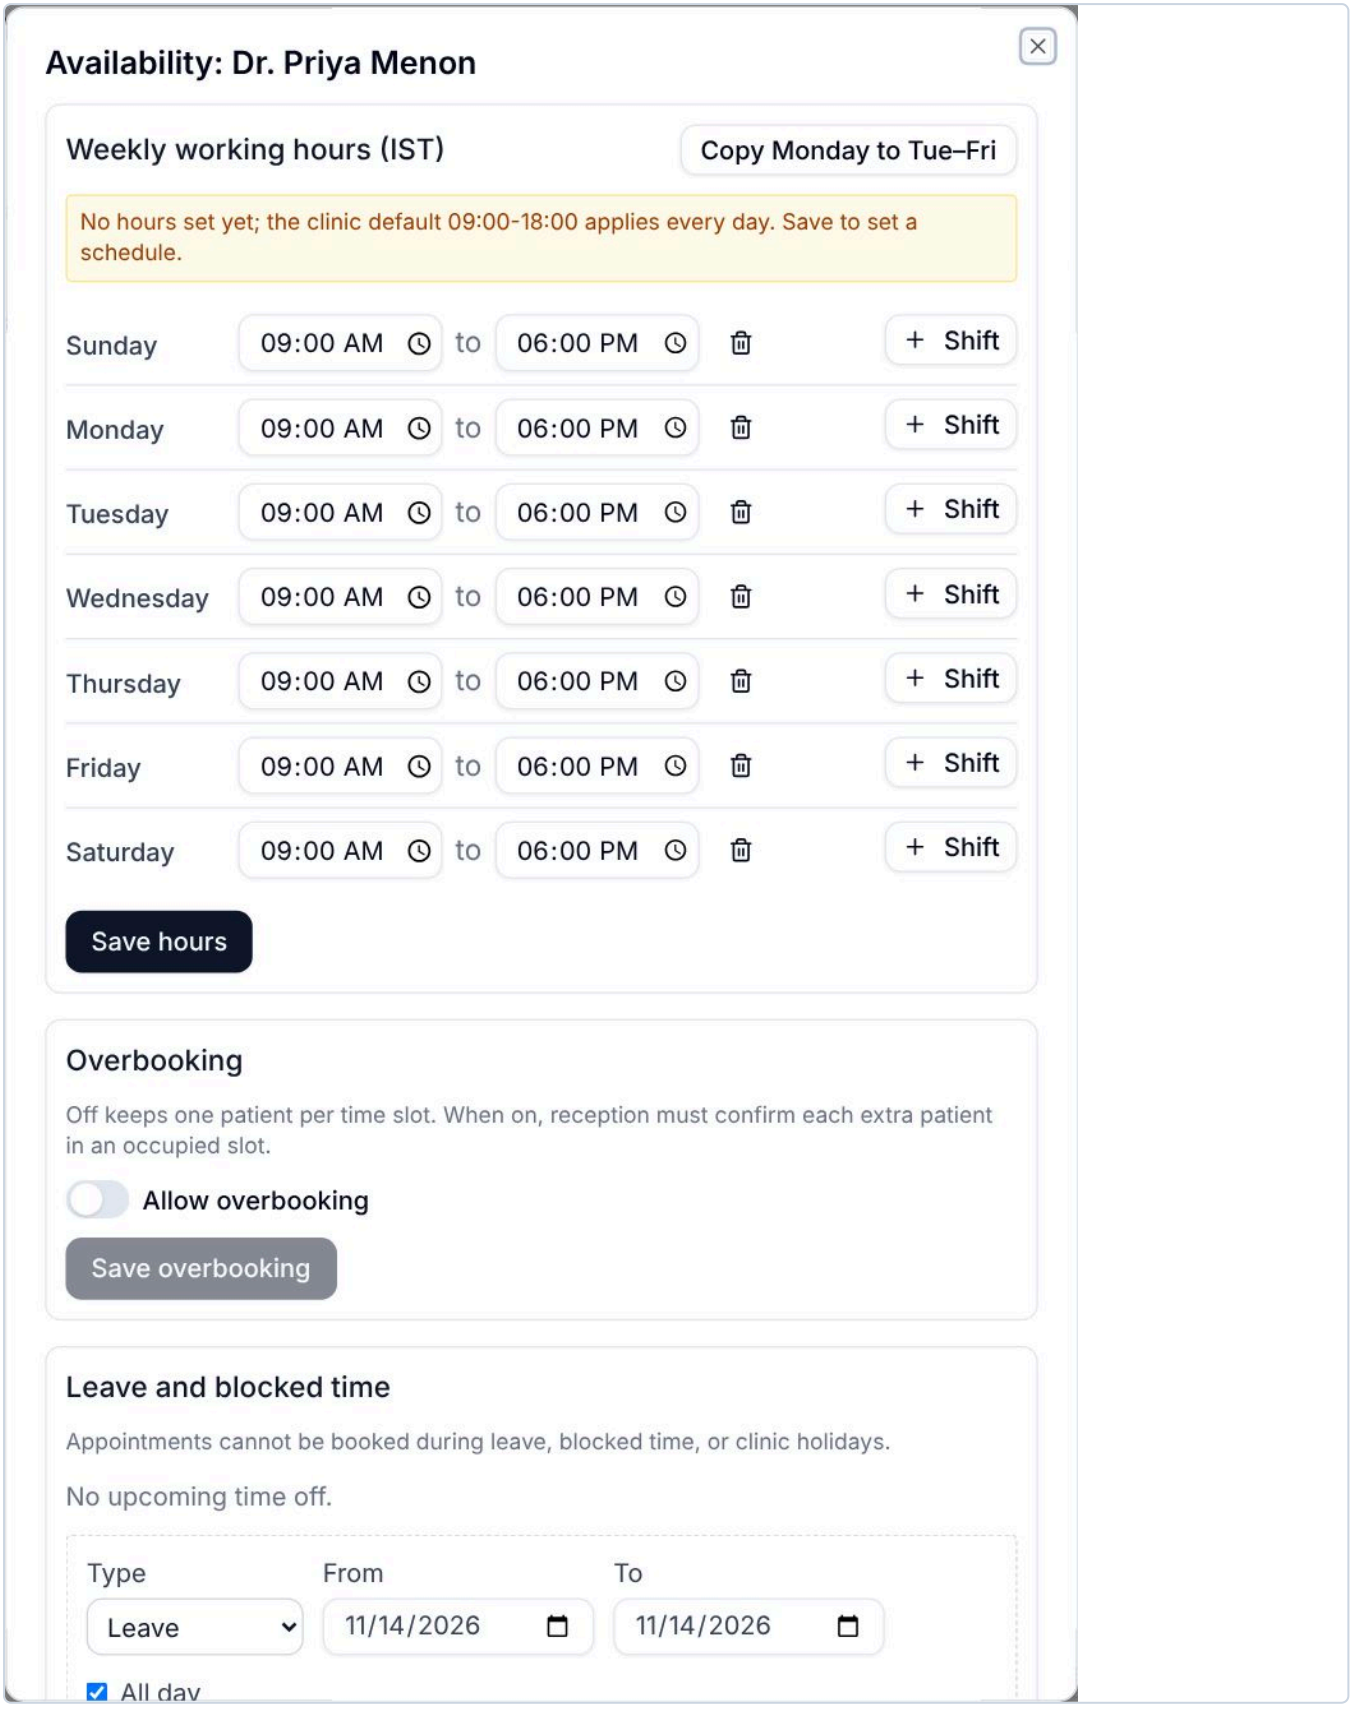

Figure 17.9. A doctor's weekly hours, leave and overbooking.

> **TIP**
> A yellow note at the top means the hours shown are a default or an older setting. Click **Save hours** to keep them as the doctor's schedule.

17.8 Set up WhatsApp messages for a doctor

WHO USES THIS Admins and owners

The clinic can send patients a WhatsApp confirmation when an appointment is booked with a doctor. **WhatsApp Settings** on the doctor's row turns this on for that doctor. The clinic's WhatsApp Business account must be connected first by whoever set up the system.

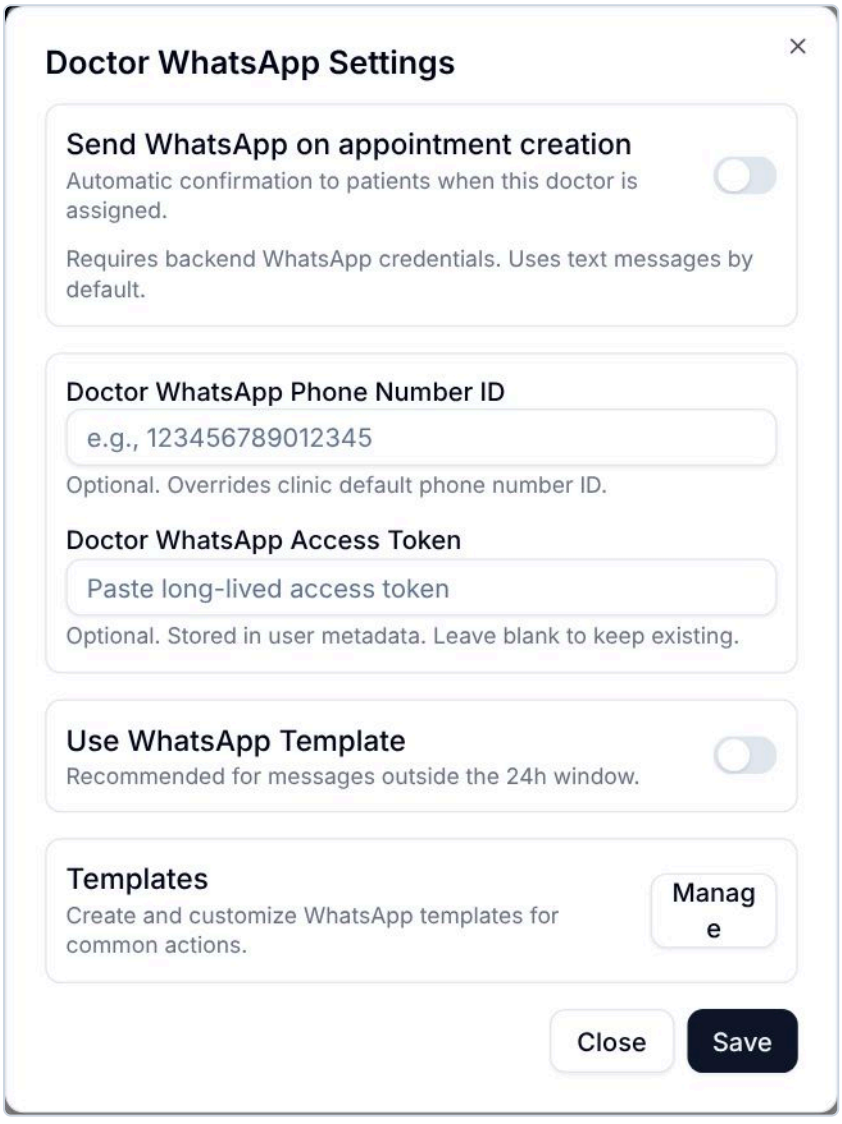

Figure 17.10. Doctor WhatsApp Settings.

ON THE SCREEN	WHAT IT MEANS
Send WhatsApp on appointment creation	Switch on to send the patient a message whenever an appointment is booked with this doctor.
Doctor WhatsApp Phone Number ID	Optional. Only if this doctor sends from their own WhatsApp number instead of the clinic's. The number comes from the WhatsApp Business account.
Doctor WhatsApp Access Token	Optional, with the number above. Leave it blank to keep the saved one. It is never shown again after saving.
Use WhatsApp Template	Switch on to send an approved template instead of plain text. WhatsApp needs a template to message a patient who has not written to the clinic in the last 24 hours. Then type the **Template Name** and **Language Code** exactly as approved, for example *en*.
Templates: Manage	Opens the template editor, where you write and keep message templates (see below).
Save / Close	**Save** keeps the settings. **Close** leaves without saving.

17.9 Write WhatsApp message templates

WHO USES THIS Admins and owners

The template editor holds the wording of the clinic's WhatsApp messages. Open it with **Manage** in a doctor's WhatsApp Settings. The list at the top shows saved templates with **Edit** and **Delete**; **New** starts a blank one.

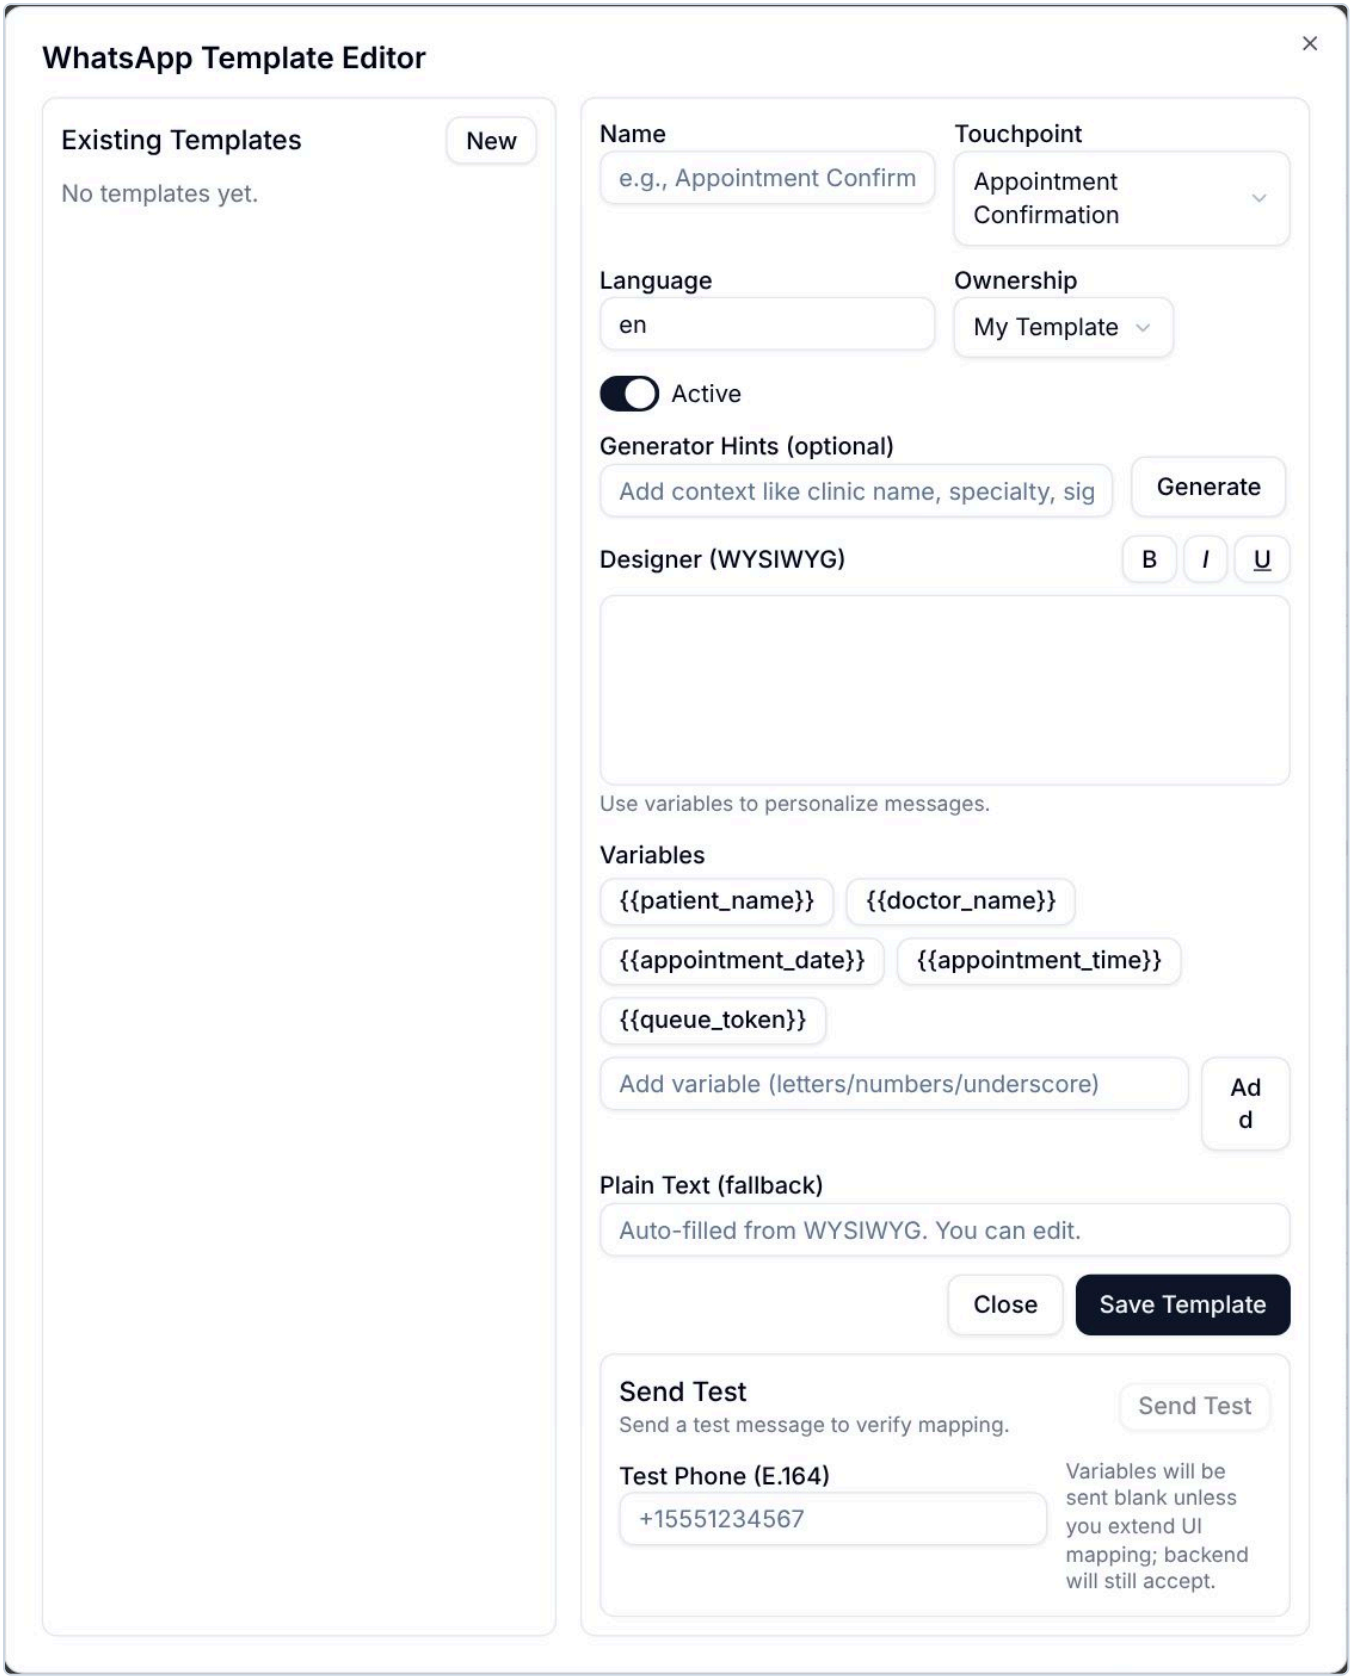

Figure 17.11. The WhatsApp Template Editor.

ON THE SCREEN	WHAT IT MEANS
Name	Your own name for the template, for example *Appointment Confirmation*.
Touchpoint	When it is used: Appointment Confirmation, Appointment Reminder, Invoice Share or Prescription Share.
Language	The language code, for example *en* or *hi*.
Ownership	**My Template** is yours only. **Branch Template (Admin)** is shared with the whole clinic.
Generator Hints and Generate	Type a few words about the clinic and click **Generate** to have a draft written for you. Read it before saving.
Active	Switch off to keep a template without using it.
Designer	Write the message. **B**, *I* and U make text bold, italic or underlined.
Variables	Blanks filled in for each patient, such as the patient's name or appointment time. The ready-made ones are patient_name, doctor_name, appointment_date, appointment_time and queue_token. Click one to put it into the message where the cursor is. To make a new one, type its name (letters, numbers and underscores) and click **Add**.
Plain Text (fallback)	The message without formatting. It fills itself from the designer; you can edit it.
Save Template	Keeps the template.
Send Test	After saving, type your own number in **Test Phone** with the country code, for example +919849012345, and click **Send Test** to see the message on your phone. The variables are sent blank in a test.

17.10 Add a clinic holiday

WHO USES THIS Admins and owners

A clinic holiday closes the clinic for every doctor. Appointments cannot be booked on it. Add festivals and closures well ahead so reception does not book patients on those days.

1. Click **Clinic Holidays** at the top of the Users page.
2. Choose the first day in **From** and the last day in **To**. For one day, make them the same.
3. Leave **All day** ticked, or untick it and set a **Start time** and **End time** for a half day.
4. Type a **Reason**, for example *Republic Day*.
5. Click **Add clinic holiday**. It appears in the list above the form. Click the bin beside a holiday to remove it.

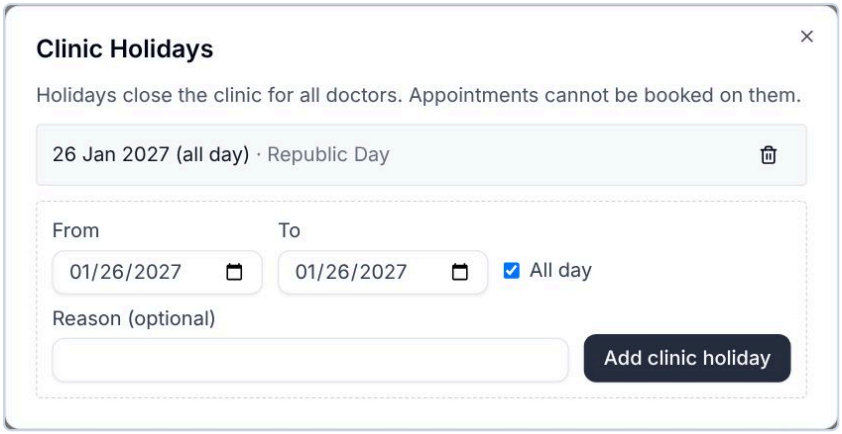

Figure 17.12. Clinic Holidays with Republic Day added.

17.11 Remove a staff account

WHO USES THIS Admins and owners

Delete an account only when it was made by mistake, for example a duplicate. For someone who leaves, set their status to **Inactive** instead: their name stays on the visits, bills and prescriptions they made.

1. Click **Delete** on the person's row.
2. The browser asks *Delete user?*. Click **OK** to delete, or **Cancel** to keep the account.
3. The person disappears from the table.

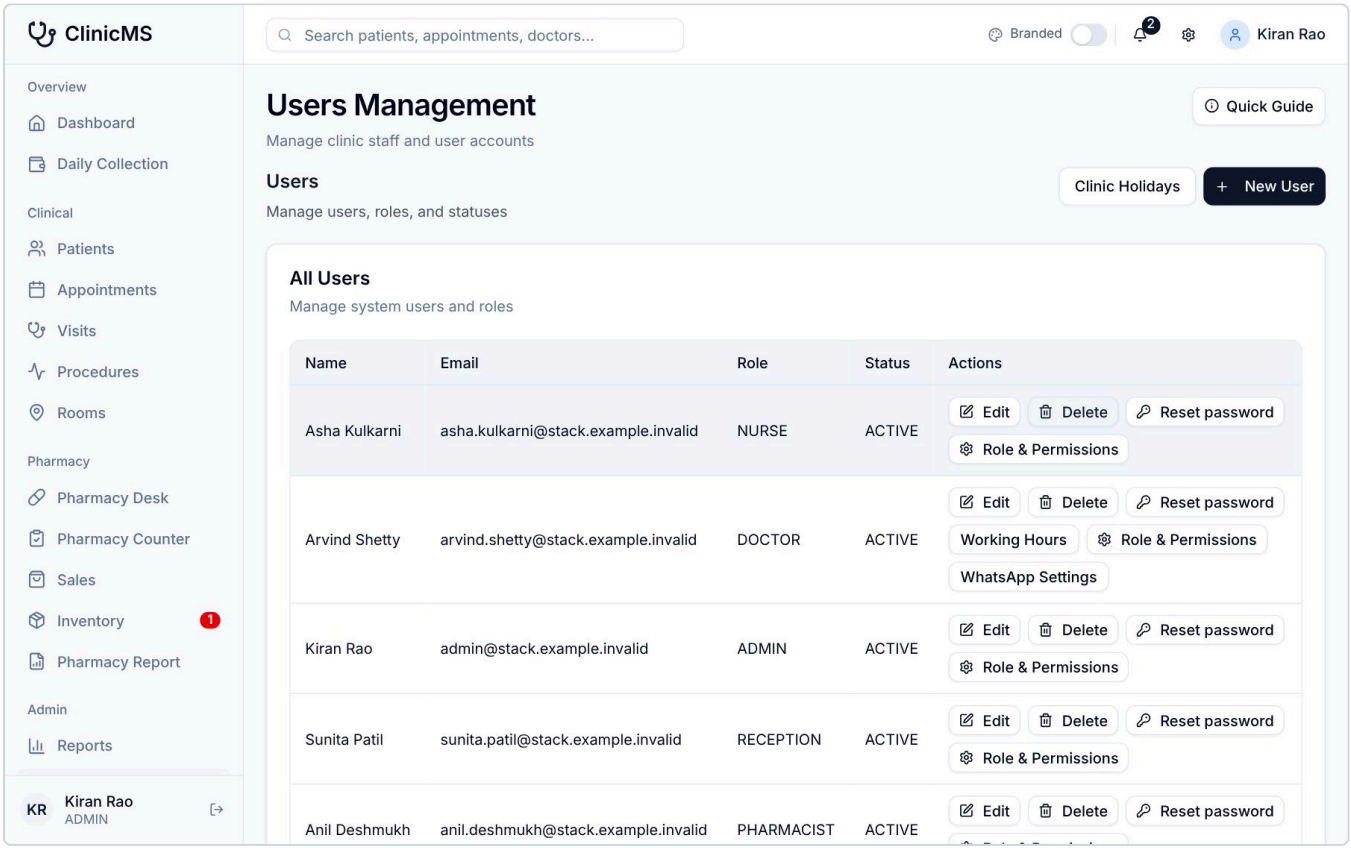

Figure 17.13. The list after the Deepa Nair account was deleted.

TAKE CARE

Deleting cannot be undone.

CHAPTER 18

Fee list

The Fee list holds the clinic's three standard consultation and procedure fees. When reception creates a bill from the appointment calendar, the bill starts from the matching fee, so nobody has to remember the price. Only admins and owners can change the list.

18.1 See the clinic's fees

WHO USES THIS Admins and owners

Open **Fee list** from the Admin part of the menu. The page has one row for each kind of bill. Each row says when that fee is used, what it is now, and who changed it last and when.

Consultation and procedure fees are billed without GST.

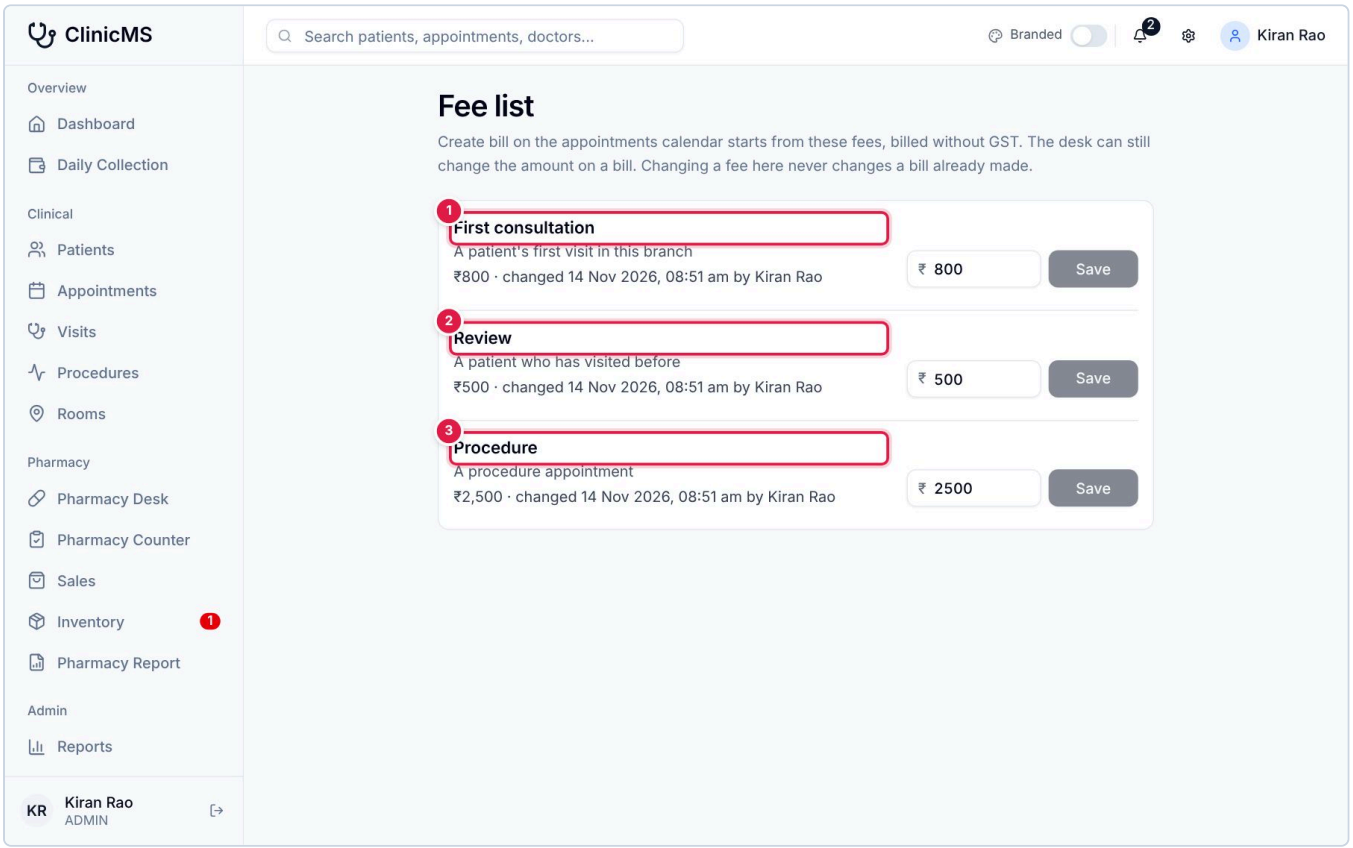

Figure 18.1. The Fee list with the three fees, each with its last change.

ON THE SCREEN	WHAT IT MEANS
1. First consultation	Used when a patient has no earlier visit in this branch.
2. Review	Used when the patient has visited this branch before.
3. Procedure	Used for any appointment booked as a procedure, whether or not the patient is new.

No fee set yet	Nobody has entered a fee for this row. Bills of this kind start with an empty fee box.
₹800 · changed 13 Nov 2026, 06:40 pm by Kiran Rao	The line under each fee: the current fee, when it was last changed and by whom.
Save	Grey until you type an amount different from the saved fee.

18.2 Set or change a fee

WHO USES THIS Admins and owners

Change a fee when the clinic's prices change. Each row saves on its own, so changing the Review fee does not touch the other two.

A new fee applies to bills created after you save it. Bills that already exist keep the amount they were made with.

1. Click in the ₹ box of the fee you want to change.
2. Type the new amount in rupees, for example **850**. You can type commas, such as 1,200. The amount must be above 0 and no more than ₹10,00,000.
3. Click **Save** on the same row. The button stays grey until the amount is different from the saved one.
4. Check the message at the bottom of the screen, for example *Review fee saved: ₹550*. The line under the fee name now shows your name and the time.

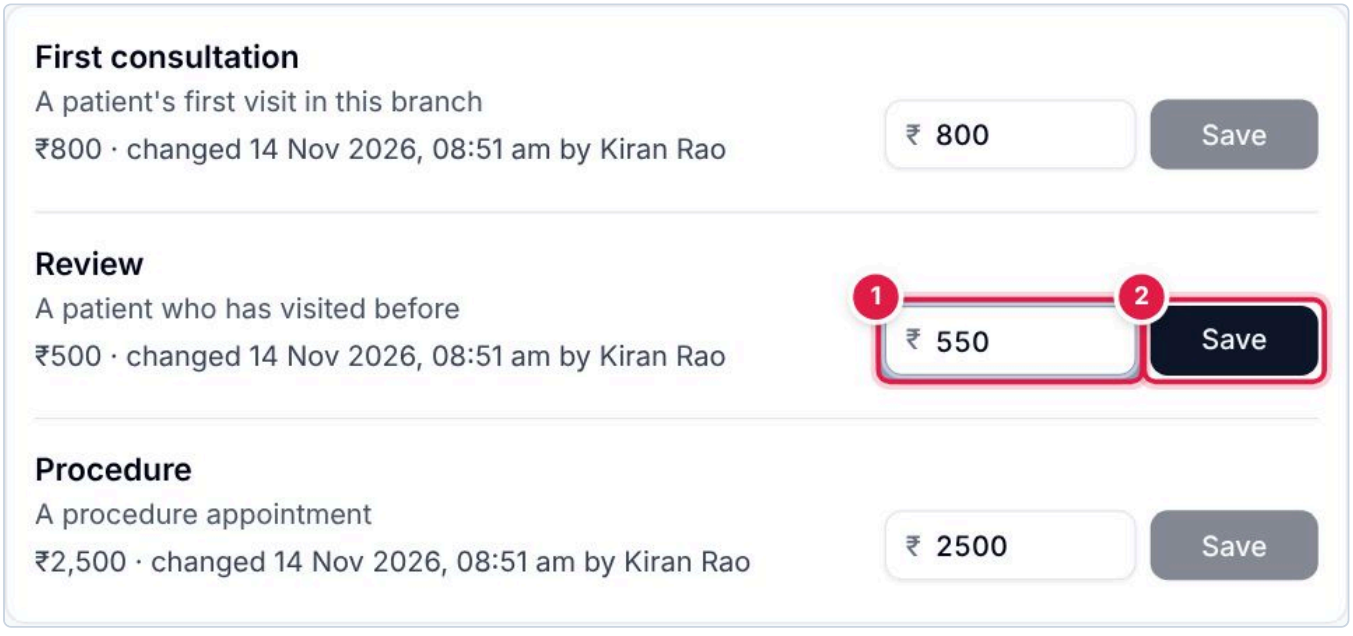

Figure 18.2. A new Review fee typed in. Save turns dark once the amount differs from the saved fee.

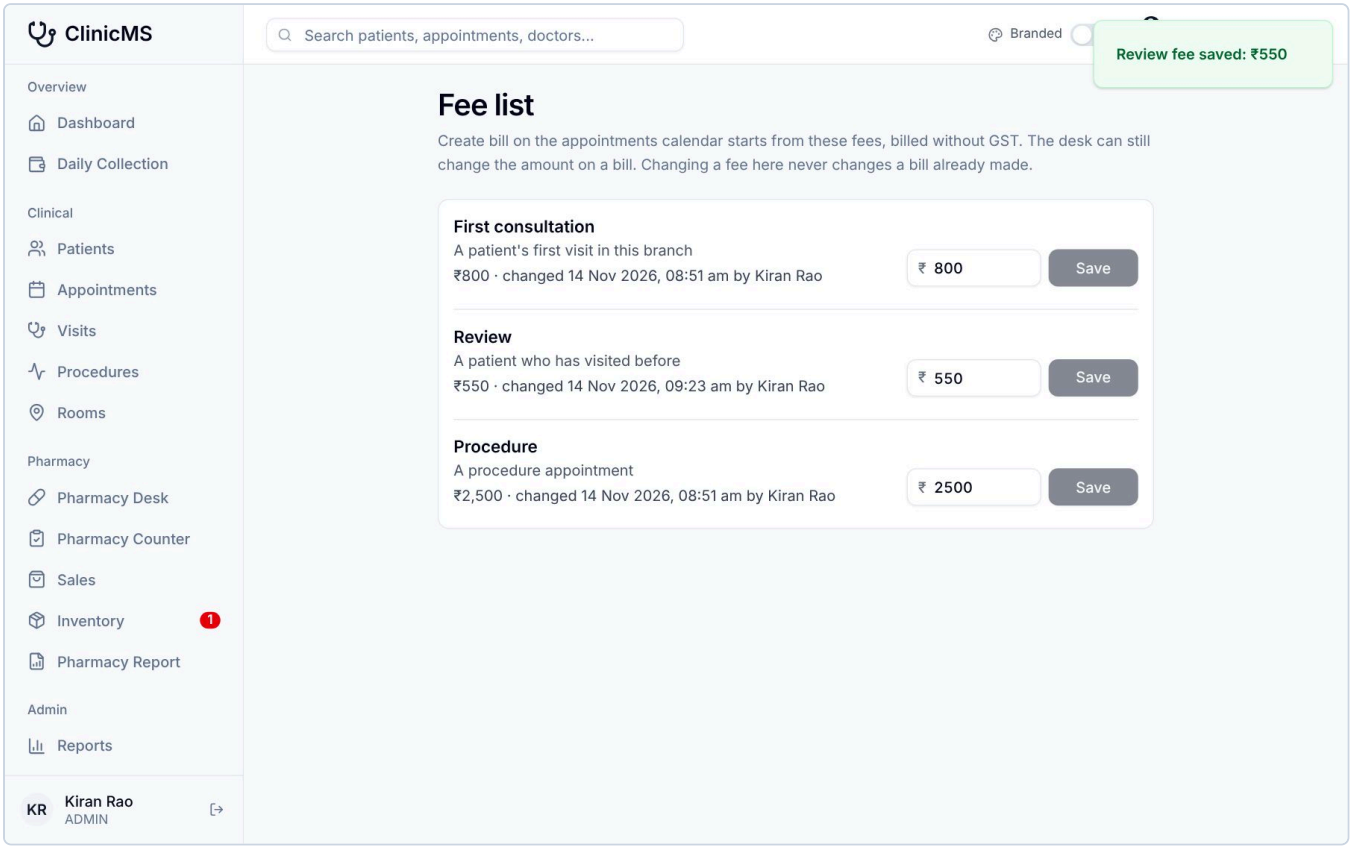

Figure 18.3. After saving, the row shows the new fee and who changed it.

> **TIP**
>
> If the box turns red with *Enter an amount above 0*, the amount has letters in it, is 0, or is too large.
>
> If another admin changed the same fee while you were typing, the row says who changed it and to what. Your amount stays in the box. Check it and click **Save** again.

18.3 Clear a fee

WHO USES THIS Admins and owners

Clear a fee when the clinic does not want a starting amount for that kind of bill, for example when every procedure is priced differently.

1. Delete the amount so the box is empty and shows **Not set**.
2. Click **Clear fee**. The button has this name only while the box is empty.

After a fee is cleared, bills of that kind start with an empty fee box and the desk types the amount each time.

18.4 How the appointment calendar uses the fees

WHO USES THIS Reception, admins

On the appointment calendar, **Create bill** on an appointment opens a bill with one line: *First consultation*, *Review consultation* or *Procedure*. The app picks the kind from the appointment: a procedure appointment is a Procedure bill; any other appointment is a First consultation for a new patient and a Review for a patient who has visited this branch before.

The **Fee** box on the bill is filled with the matching fee from this list, and the line under it says *From fee list: Review ₹500*. The desk can change the amount for this one bill. The line then says *Fee list: Review ₹500, changed for this bill* and offers **Use ₹500** to go back to the list fee. Changing the amount on a bill never changes the Fee list.

When no fee is set for that kind, the box is empty and says *No fee set*. Admins also see a **Set fees** link that opens this page. The Appointments chapter shows the whole billing window.

18.5 Who can change the fees

WHO USES THIS Everyone

Only admins and owners see **Fee list** in the menu and can change fees. Anyone else who opens the page sees a short message instead of the fees. Reception and doctors still see the fee when they create a bill, and can change the amount on that bill.

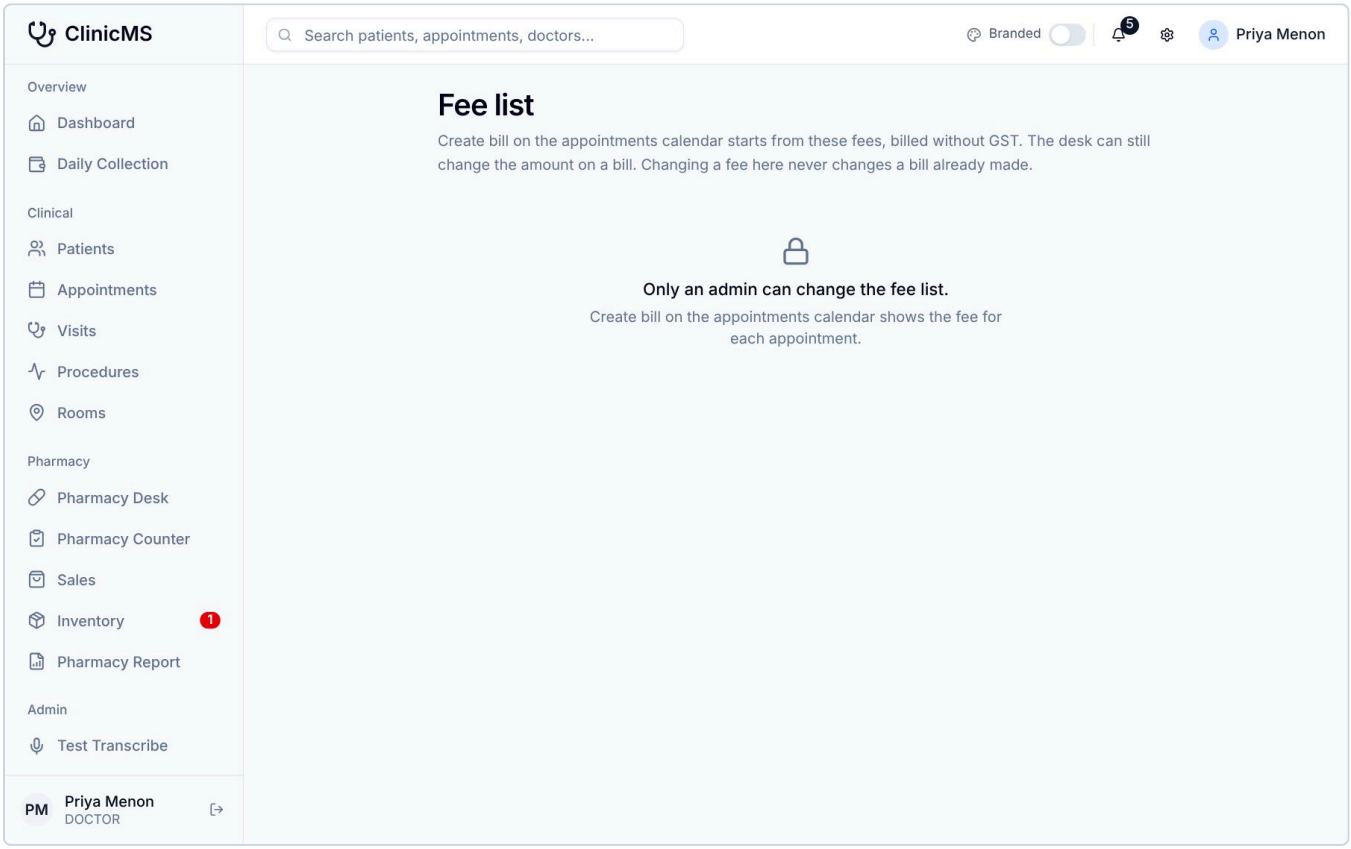

Figure 18.4. What a doctor sees on the Fee list page.

CHAPTER 19

Voice transcription test

The **Test Transcribe** page lets a doctor or admin check that voice dictation works before relying on it in a visit. You record a short conversation, send it for transcription, and read back what the app heard, split into what the doctor said and what the patient said. Nothing you record here is saved to any patient's record.

19.1 When to use the test page

WHO USES THIS Doctors, admins and owners

The microphone buttons in a visit (see the Visits and Prescriptions chapters) use the same transcription service. Use this page when you set up a new computer or headset, when dictation in a visit returns nothing, or when the text comes back garbled. If a recording works here, it will work in a visit.

Open it from **Test Transcribe** in the Admin part of the menu. The page opens without the usual menu on the left. Use its own **Back to dashboard** button at the top right to return. Leaving the page stops any recording that is still running.

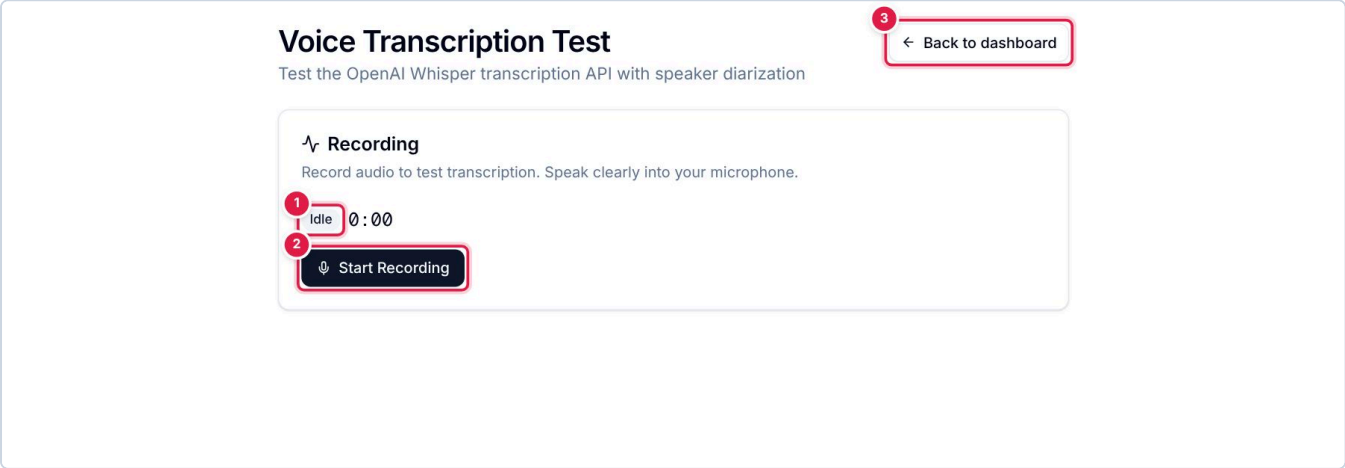

Figure 19.1. The Voice Transcription Test page before anything is recorded.

ON THE SCREEN	WHAT IT MEANS
1. Status and timer	**Idle** when nothing is being recorded. While recording, a red **Recording** badge pulses and the timer counts minutes and seconds.
2. Start Recording	Asks the browser for the microphone and starts recording. The first time, the browser asks you to allow microphone access. Click **Allow**.
3. Back to dashboard	Leaves the page and stops the microphone.

19.2 Record and transcribe a test clip

WHO USES THIS Doctors, admins and owners

Record about 20 to 30 seconds of a normal consultation: the doctor asks a question, the patient answers. Two voices let you check that the app can tell the speakers apart.

1. Click **Start Recording**. Allow the microphone if the browser asks.
2. Watch the **Audio Level** bar while you speak. Green means a good level. Yellow is acceptable. Red, with the message *Low audio level*, means you should speak louder or move closer to the microphone.
3. Click **Stop Recording**. A **Playback** player appears. Press play to hear what was captured.
4. Click **Transcribe**. The button reads **Transcribing...** while the clip is processed. This takes a few seconds for a short clip.
5. Read the result in the **Transcription Results** box that appears below.

ON THE SCREEN	WHAT IT MEANS
Stop Recording	Red button shown while recording. Ends the recording.
Transcribe	Sends the recording for transcription. Shown after you stop.
Download	Saves the recording to your computer as an audio file, for example to send to support if transcription keeps failing.
Clear	Throws the recording and its result away so you can start again.
Chunks	The recording is collected in 5-second pieces. The badge next to the timer counts them.

> **TIP**
> A quiet room and a headset microphone give the best results.
>
> If an error appears in a red box under the recording controls, read it. *Permission denied* means the browser was not allowed to use the microphone: click the microphone or lock icon in the address bar and allow it.

19.3 Read the transcription result

WHO USES THIS Doctors, admins and owners

The result has three tabs. They show the same recording in different ways.

ON THE SCREEN	WHAT IT MEANS
Combined	Everything that was said, as one block of text. If the box says *No speech detected*, the clip was too quiet or silent.
By Speaker	The text split into a blue **Doctor** box and a green **Patient** box. If it says *No speaker separation available*, the clip was too short to tell the voices apart.

Segments	Each stretch of speech in order, labelled **DOCTOR** or **PATIENT**, with how confident the app is about it as a percentage.

In a visit, the microphone next to **Chief Complaints** fills in the patient's words when the speakers can be told apart, and the full text otherwise. The microphone next to **Detailed Examination** always inserts the full text. Dictated text is added to the end of whatever is already in the box, so you can dictate in several parts.

19.4 The Diagnostics box

WHO USES THIS Admins and support staff

After a recording, a **Diagnostics** box shows technical details: the number of chunks, the total size, the recording format, the duration, the average bitrate and the sample rate. It also explains how the recording is converted before transcription. You do not need these details for daily work. They help support staff when a recording fails.
