Pending Change Requests

Linaé Skin, Hair & Aesthetic Clinic: consolidated audit of the two change-request PDFs against the Clinic_Management_System codebase (branch claude/elegant-maxwell-swcfuz, commit ebc5606). Prepared 07/11/2026.

How to read this

Both PDFs were read in full. The pharmacy PDF restates the pharmacy items of the clinic PDF under the same CR numbers, so each CR appears once here with every source page listed. Each CR was checked against the frontend, backend, Prisma schema, QA notes in docs/qa and the git log. **Implemented** means the code does what the CR asks. **Partial** means a real part of it exists in code but named items are missing. **Pending** means no code for the request was found after a search. Evidence cites path:line at commit ebc5606. Nothing was run in a browser for this audit; verdicts come from reading code.

Summary

Source	Implemented	Partial	Pending	Total
Clinic PDF	6	16	9	31
Pharmacy PDF	3	13	7	23
Combined (de-duplicated)	6	16	10	32

The clinic PDF lists CR-08 to CR-34 plus CR-33a to CR-33d (31 items; CR-01 to CR-07 were already closed by the clinic). The pharmacy PDF covers 22 of those CRs plus one item with no CR number, the Pharmacy menu decision in section 0.1 (listed here as PH-0.1). It also restates CR-13 as a rule for every screen; CR-13 is counted under the clinic PDF only. CR-30 and CR-32 are parked by the clinic and appear in their own group.

Open items at a glance

ID	Title	Area	Status
PH-0.1	Pharmacy menu: Sales, Purchase, Inventory, Pharmacy Report	Pharmacy / Menu structure	**Pending**
CR-24	Sales tab like eVitalRx (list of bills)	Pharmacy / Sales	**Partial**
CR-25	Sales Returns sub-tab	Pharmacy / Sales	**Partial**
CR-26	Purchase tab like eVitalRx (list of invoices)	Pharmacy / Purchase	**Partial**
CR-27	Purchase Returns settled by credit notes	Pharmacy / Purchase	**Partial**
CR-28	Terms of Trade (TOT) per distributor and product	Pharmacy / Purchase	**Pending**
CR-14	Purchase matching: 'No close match' for items already in inventory	Pharmacy / Purchase	**Partial**
CR-34	Item detail page: batches and per-item ledger	Pharmacy / Inventory	**Partial**
CR-10	Stock figures and item matching are wrong: redo inventory	Pharmacy / Inventory	**Partial**
CR-11	Standard format for medicine names (Tab. / Cap. / Syp. / cream)	Pharmacy / Inventory	**Pending**
CR-29	Stock Optimization: slow-moving stock, returnable vs not	Pharmacy / Inventory	**Partial**
CR-31	Stock reconciliation every 10 days with staff sign-off	Pharmacy / Inventory	**Partial**
CR-33	Pharmacy Report: daily collection and the GST report set	Pharmacy / Pharmacy Report	**Partial**
CR-33a	GST Purchase Bills report (per-bill slab columns)	Pharmacy / Pharmacy Report	**Partial**

ID	Title	Area	Status
CR-33b	GST Sales Register (flat per-bill columns)	Pharmacy / Pharmacy Report	**Partial**
CR-33c	Day-wise Summary report	Pharmacy / Pharmacy Report	**Pending**
CR-33d	Item-wise Margin report	Pharmacy / Pharmacy Report	**Pending**
CR-30	PARKED: doctor approval before a new item enters inventory	Pharmacy / Parked by the clinic (do not build now)	**Pending**
CR-32	PARKED: AI-suggested min/max stock levels	Pharmacy / Parked by the clinic (do not build now)	**Partial**
CR-08	Space-optimised print: every heading inline with its value	Clinic / Prescription print	**Partial**
CR-18	Patient History: remove Triggers and Prior Treatments	Clinic / Visit form	**Pending**
CR-19	Rx table: column widths and Add Row after every row	Clinic / Visit form	**Partial**
CR-21	Keep patient name, age, sex visible when Patient Context is collapsed	Clinic / Visit form	**Pending**
CR-22	Make 'On Examination' collapsible and collapsed by default	Clinic / Visit form	**Pending**
CR-17	Appointments: billing info, bill type, Daily Collection	Clinic / Appointments	**Pending**
CR-13	Bigger font and fewer taglines (all screens)	Clinic / Whole software	**Partial**

Pharmacy: pending and partial

Menu structure

PH-0.1 Pharmacy menu: Sales, Purchase, Inventory, Pharmacy Report — Pending

Source	Pharmacy PDF p.3-4
Requirement	The Pharmacy group holds exactly four items: Sales, Purchase, Inventory and Pharmacy Report. Pharmacy Billing is replaced by Sales. Pharmacy Desk and Pharmacy Counter are regrouped into those four after the developer lists what each does today (Q36). Admin > Reports stays for clinical reports.
What is missing	The menu is unchanged. Pharmacy Desk, Pharmacy Counter, Pharmacy Billing and Inventory are still separate items, there is no Purchase or Pharmacy Report item, and no list of Desk/Counter functions has been produced.
Code evidence	`frontend/src/components/layout/sidebar.tsx:90-117 (Pharmacy Desk, Pharmacy Counter, Pharmacy Billing, Inventory; Reports under Admin)` `frontend/src/app/dashboard/pharmacy/page.tsx:46 (PharmacySideTab = 'desk' | 'counter' | 'billing')`

Sales

CR-24 Sales tab like eVitalRx (list of bills) — Partial

Source	Pharmacy PDF p.6-7; Clinic PDF p.24-25
Requirement	A Sales list replacing Pharmacy Billing. Columns Bill No, Entry Date/time, Bill Date, Entry By, Patient, Mobile, Bill Amount, Payment mode badge. Print and WhatsApp icons per row, Draft rows, sortable headers, filter bar (field search, financial-year date range, name/mobile, payment mode, More Filters count), + New, pinned running total.
What is missing	Only a card-style invoice history exists (Inventory > Sales > Patient invoice history). No table with the specified columns, no Entry By, no sortable headers, no financial-year date range (presets only: today/week/month/quarter), no WhatsApp row action, payment mode shown as text not a badge, no pinned total for the current filter. Pharmacy Billing still exists as its own screen.

Code evidence	`frontend/src/components/pharmacy/PharmacyInvoiceList.tsx:671-760 (card list, View/Download/Mark paid/Confirm buttons)`
	`frontend/src/components/pharmacy/PharmacyInvoiceList.tsx:93-108 (date presets)`
	`frontend/src/components/inventory/InventoryWorkspace.tsx:71-75, 429 (Sales area, history view)`

CR-25 Sales Returns sub-tab — Partial

Source	Pharmacy PDF p.8-9; Clinic PDF p.26-27
Requirement	Sales holds two sub-tabs, Sales and Returns, with the same filter bar and layout; Returns columns Bill No, Entry Date, Bill Date, Entry By, Patient, Mobile, Amount (sortable); + New; clear empty state; pagination.
What is missing	Customer returns exist as a workflow document (select original sale, restock/quarantine/loss per batch) listed under Inventory > Sales > Customer returns. There is no Sales/Returns tab pair, and the returns register does not have the Sales filter bar, the specified columns or sortable headers.
Code evidence	`frontend/src/components/inventory/workspace-model.ts:4 (SALES_RETURN 'Customer returns')` `frontend/src/components/inventory/InventoryWorkspace.tsx:73, 926+ (generic WorkflowRegister list)`

Purchase

CR-26 Purchase tab like eVitalRx (list of invoices) — Partial

Source	Pharmacy PDF p.13-14; Clinic PDF p.28-29
Requirement	Purchase as its own menu item. Columns Sr No, Bill No (link), Entry Date/time, Bill Date, Entry By, Distributor, Bill Amount, payment-status badge with one-click mark-settled. Sortable headers; filter bar with distributor name and payment-status filter; + New; More menu.
What is missing	A purchase register exists inside Inventory > Purchases > Saved bills with Invoice (link), Supplier, Date, Status, Amount, Original file, search, date range, status filter, export and paging. Missing: own menu item, Sr No, Entry Date/time, Entry By, payment Due badge with one-click settle on the row, payment-status filter, sortable headers.
Code evidence	`frontend/src/components/inventory/InventoryWorkspace.tsx:728-925 (PurchaseRegister; columns at 848-855)` `frontend/src/components/inventory/InventoryWorkspace.tsx:46-58 (Purchases menu)`

CR-27 Purchase Returns settled by credit notes — Partial

Source	Pharmacy PDF p.15; Clinic PDF p.30
Requirement	Purchase/Returns sub-tabs; return records distributor, invoice, item, batch, expiry, qty, value; credit notes as first-class records; 'Credit note awaited' state; per-distributor credit balance net of dues; partial use across invoices; stock movement logged; Returns columns with status Awaited/Received/Adjusted/Fully used.
What is missing	Backend and screens exist for supplier returns (draft, challan sends stock out, finalise creates credit once), credit notes and allocation of a credit across several posted bills with remaining balance. Missing: a Purchase > Returns sub-tab in the Sales style, the specified columns and four-state status, and a distributor net position (dues less credits) shown on the Purchase list.

Code evidence	`frontend/src/components/inventory/workspace-model.ts:3, 15 (SUPPLIER_RETURN, CREDIT_NOTE)`
	`backend/prisma/schema.prisma:1750-1780 (InventorySupplierCredit amount/applied, InventoryCreditAllocation)`
	`frontend/src/components/inventory/SupplierCreditPanel.tsx:103-168 (allocate credit, 'Available x of y')`

CR-28 Terms of Trade (TOT) per distributor and product — Pending

Source	Pharmacy PDF p.16-19; Clinic PDF p.31-34
Requirement	Phase 1: record per distributor + product the discount %, scheme, minimum expiry, margin, PTR; 3-step entry; who/when/note; read-only for staff, editable by doctors; shown on the purchase invoice screen. Phase 2: automatic checking of invoices against TOT, mismatches marked Returnable.
What is missing	Nothing found. No model, endpoint or screen for terms of trade, schemes or minimum expiry.
Code evidence	`Search for 'terms of trade|termsOfTrade|minimumExpiry|scheme' across backend/src, frontend/src and schema.prisma: only PharmacyPurchaseInvoiceItem.schemeAmount (schema.prisma:1619), an invoice-line amount, not a stored deal`

CR-14 Purchase matching: 'No close match' for items already in inventory — Partial

Source	Pharmacy PDF p.20; Clinic PDF p.10
Requirement	Clean names before matching; tolerate small spelling differences (Fort = Forte); clinic items first, show top candidates plus search; never recommend create-new when a same-brand item exists; remember confirmed matches per supplier; never add '(loose ...)' to product names.
What is missing	Normalisation of pack words, prefix/phrase/fuzzy name matching, branch-scoped candidates, manual search and plain labels exist (shared with the CR-15 work). Missing: confirmed matches are not remembered per supplier (reviewed aliases come only from inventory renames, branch-wide); inventory display names still append '(loose tablets/capsules)'; no regression test for the Zitcare Fort/Forte case was found.

Code evidence	`backend/src/modules/pharmacy/pharmacy-purchase-invoice.service.ts:726-765 (suggestMasterMatches, labels, CREATE_NEW only with no candidate)`
	`backend/src/shared/search/drug-search.ts:85-113 (aliases loaded from inventory item metadata, not from purchase confirmations)`
	`backend/src/modules/inventory/inventory-names.ts:12-17 (appends '(loose tablets|capsules)' to the name)`

Inventory

CR-34 Item detail page: batches and per-item ledger — Partial

Source	Pharmacy PDF p.23-25; Clinic PDF p.57-59
Requirement	Item header (photo, manufacturer link, pack, stock, MRP, GST, CESS, HSN, GTIN, category, schedule, location, min/max, discount slabs, edit and stock-alert buttons). Tabs Batches, Purchases, Purchase Returns, Sales, Sales Returns, Ledger, Blocked Stock. Batches with hide-zero and Print QR. Ledger with running closing balance, date and type filters, download.
What is missing	The item page and all seven tabs exist, with batch table (expiry, PTR, MRP, landing price, margin, GST, location), hide-zero toggle, label printing and a ledger with a Closing column. Missing: product photo, GTIN, schedule, CESS, discount slabs and stock-alert button in the header; ledger date-range and transaction-type filters; ledger download; customer/distributor column.
Code evidence	`frontend/src/components/inventory/WorkspaceStock.tsx:445-460 (tab list), 464-536 (batches, hide zero), 643-725 (ledger with Closing)` `frontend/src/components/inventory/WorkspaceStock.tsx:308-360 (header shows stock, held, available, min/max, PTR, MRP, margin only)`

CR-10 Stock figures and item matching are wrong: redo inventory — Partial

Source	Pharmacy PDF p.26; Clinic PDF p.6
Requirement	Link Rx items to inventory by ID; remember pharmacist matches; full physical stock take via export/import with old-vs-new record; merge duplicates after confirmation; log every movement; stock status per Rx item (In stock/Low/Out/Not linked); Refresh button; clinic items first in picker and billing.
What is missing	ID-based stock identity, movement log, the stock-status labels, stock import and counts are in place. Missing: a duplicate-item merge feature (none exists for inventory), and a documented export-count-import reset of the whole inventory with an old-vs-new record. The physical stock take itself is operational work not evidenced in the repo.

Code evidence	`frontend/src/components/pharmacy/PrescriptionDispensingQueue.tsx:458 (Not linked / Out / Low / In stock)`
	`backend/prisma/schema.prisma:2500 (InventoryMigration import);`
	`docs/qa/cr-12-unified-inventory.md (CR-10 stock-identity dependency)`
	`No inventory merge code: 'merge duplicate' matches only patient-deduplication.service.ts`

CR-11 Standard format for medicine names (Tab. / Cap. / Syp. / cream) — Pending

Source	Pharmacy PDF p.27-28; Clinic PDF p.7
Requirement	Store form, brand name, strength, pack size and item code as separate fields; print name built from form + name + strength; codes and pack sizes never print; Combination product tick box; new-item form requires form/name/strength; Rx picker shows the standard name; clean-up list of items missing strength.
What is missing	InventoryItem has no strength, dosage-form or combination fields and nothing builds a 'Tab. X 150 mg' style name. Only a free-text reviewed name exists. No code strips catalogue prefixes such as '13 74 |'.
Code evidence	`backend/prisma/schema.prisma:978-1003 (InventoryItem: name, genericName, brandName, packSize, packUnit; no strength/form)` `backend/src/modules/inventory/inventory-names.ts:12-17 (display name = stored name, plus loose label)`

CR-29 Stock Optimization: slow-moving stock, returnable vs not — Partial

Source	Pharmacy PDF p.30-31; Clinic PDF p.35-37
Requirement	Data-quality strip across the top of Inventory with live counts (missing location, category, HSN, min/max, unmapped). 'Run optimization' splitting slow movers into Returnable (creates purchase-return draft) and Non-returnable, grouped by distributor. Settable non-moving days and minimum batch value.
What is missing	A 'Missing information' filter (category, HSN, location, min, max, ...) and an Unmapped filter exist on the stock list, and Shelf Intelligence shows a 'Slow/dead stock' count (days of cover > 120). Missing: the always-visible count strip, Run optimization, the returnable/non-returnable split by distributor, automatic return drafts, and the two settable rules.

Code evidence	`backend/src/modules/inventory/inventory-stock-query.ts:43-52 (missing-field filters)`
	`frontend/src/components/inventory/WorkspaceStock.tsx:1077-1086 (Unmapped, Missing information)`
	`frontend/src/components/inventory/ShelfIntelligence.tsx:143, 254 (Slow/dead stock count, fixed 120 days)`

CR-31 Stock reconciliation every 10 days with staff sign-off — Partial

Source	Pharmacy PDF p.32-34; Clinic PDF p.40-42
Requirement	Configurable 10-day cycle; items assigned to staff, items per person per day; counting screen with variance; locked named sign-off; doctor approval before stock changes; reconciliation permission; reminder in Today; on-demand count; history with total variance.
What is missing	Stock counts with variance approval, recount and on-demand 'Count this batch' exist, and automation can create a daily count. Missing: a configurable cycle length (only daily), assignment of items to named staff with a per-day quota, a locked sign-off record, a reconciliation permission, and a history view with total variance per run.
Code evidence	`backend/src/modules/inventory/inventory-workflow-scheduler.service.ts:28, 94 (daily auto count when auditEnabled)` `backend/src/modules/inventory/inventory-workflow.service.ts:821, 934, 973 (RECOUNT, approver on post, count posting)`

Pharmacy Report

CR-33 Pharmacy Report: daily collection and the GST report set — Partial

Source	Pharmacy PDF p.39-42; Clinic PDF p.45-47
Requirement	'Pharmacy Report' menu item; categories down the left (GST, Margin, Stock, Accounting, Others); search; common reports on landing page; every report with date range and Excel/CSV/PDF export. Daily collection / payment reconciliation by payment mode. GST set: Purchase Register, Purchase Bills, Sales Register, Sales Bills, Day-wise Summary, GSTR-1, 3B, 2A, 2B, HSN-wise, Composition.
What is missing	A 'GST & monthly reports' screen exists inside Inventory > Purchases: input/output GST, purchase and sales slab totals, monthly procurement/sales/gross profit, and CSV export of source rows. Missing: the Pharmacy Report menu item, category list and search, GSTR-1/3B/2A/2B, HSN-wise and Composition reports, Excel/PDF export, and the daily collection reconciliation by payment mode.
Code evidence	`frontend/src/components/pharmacy/ComplianceCenter.tsx:272-452 (GST summary and monthly report), 782-796 (CSV export)` `backend/src/modules/pharmacy/pharmacy-compliance.controller.ts:36-60 (gst-summary, monthly-report, expiry-returns only)`

CR-33a GST Purchase Bills report (per-bill slab columns) — Partial

Source	Pharmacy PDF p.43-45; Clinic PDF p.48-50
Requirement	Month picker, type, GST filter, Show Columns, Download, month total. One row per bill with frozen left columns and slab groups CESS/0/5/12/18/28/40/Total, each Base/SGST/CGST/IGST, totals row under header, Indian digit grouping, slabs driven by rates in use.
What is missing	Purchase slab totals are computed and data-driven by rate, and source rows export to CSV. Missing: one row per bill with slab column groups, CESS group, frozen columns, Show Columns, totals row under the header, and an export with the same structure.
Code evidence	`backend/src/modules/pharmacy/pharmacy-compliance.service.ts:41-125 (slabs aggregated per rate, not per bill)`

CR-33b GST Sales Register (flat per-bill columns) — Partial

Source	Pharmacy PDF p.46-47; Clinic PDF p.51-52
Requirement	One row per bill: Bill No, Date, Customer, Mobile, Gross, Disc, Taxable, CESS, SGST, CGST, IGST, Total, with month totals under each header, customer search that recalculates totals, Print and Download.
What is missing	Sales slab totals and per-record CSV exist. Missing: the flat register table with the listed columns, totals under headers, customer search, and print.
Code evidence	`backend/src/modules/pharmacy/pharmacy-compliance.service.ts:125, 147-160 (sales slabs and generic report records)`

CR-33c Day-wise Summary report — Pending

Source	Pharmacy PDF p.48-49; Clinic PDF p.53-54
Requirement	Date range; one row per day with the bill-number range issued that day; GST slab groups as in 33a; rows sum to totals.
What is missing	No day-wise report or bill-number range logic exists.
Code evidence	`No 'day wise' / daily-summary report in backend/src/modules/pharmacy or reports; compliance controller exposes only gst-summary, monthly-report, expiry-returns`

CR-33d Item-wise Margin report — Pending

Source	Pharmacy PDF p.50-51; Clinic PDF p.55-56
Requirement	Summary tiles (sale, purchase, net GST, profit and %); per-item rows Item, Category, Unit, Manufacturer, Sale qty, Stock, MRP, Sales Amt, Purchase, Net GST, Profit (%); default sort by margin; (i) tooltips; Download.
What is missing	Only a monthly gross-profit total exists. No per-item margin report.
Code evidence	`frontend/src/components/pharmacy/ComplianceCenter.tsx:435-446 (single Gross profit figure); no itemWise/margin-by-item code found`

Parked by the clinic (do not build now)

CR-30 PARKED: doctor approval before a new item enters inventory — Pending

Source	Pharmacy PDF p.35-36; Clinic PDF p.38-39
Requirement	Staff selecting a product not in inventory creates an approval request; a doctor approves or rejects; only then is the item added.
What is missing	Not built, which matches the clinic's instruction. Approval requests exist only for price/stock edits.
Code evidence	`backend/prisma/schema.prisma DrugInventoryChangeRequest covers price/stock edits; no new-item approval flow found`

CR-32 PARKED: AI-suggested min/max stock levels — Partial

Source	Pharmacy PDF p.37-38; Clinic PDF p.43-44
Requirement	Min/max per item from sales history, as days of cover by category, recalculated weekly, with tunable inputs (refill reminders, missed demand, price band); suggestions the clinic reviews.
What is missing	Demand-based min/max proposals already exist (look-back days, min/max cover days, minimum orders) and go to a Target proposals review. Missing: per-category cover, a weekly cycle, and the refill/missed-demand/price-band inputs. Parked, so no action is expected.
Code evidence	`backend/src/modules/inventory/inventory-replenishment.service.ts:118-124; inventory-workspace.service.ts:263-265 (TARGET_REVIEW proposals)`

Clinic: pending and partial

Prescription print

CR-08 Space-optimised print: every heading inline with its value — Partial

Source	Clinic PDF p.3-4
Requirement	With Space-optimized layout on, Chief Complaints, History, Personal history, Examination, Diagnosis, Investigations, Procedures, Procedure Planned, Review Date and Follow-up print as 'Label: value' on one line; empty fields print nothing; normal layout unchanged.
What is missing	All listed blocks print inline except Examination, which the print layout does not print at all in either mode. The optional Review Date + Follow-up shared line was not done.
Code evidence	`frontend/src/components/visits/PrescriptionBuilder.tsx:5824-5826, 5957-5959 (inline label: value)` `docs/qa/cr-23-one-page-print.md 'Not included: Examination'; no exObjective in the print markup`

Visit form

CR-18 Patient History: remove Triggers and Prior Treatments — Pending

Source	Clinic PDF p.15
Requirement	Remove the Triggers and Prior Treatments fields from Patient History.
What is missing	Both inputs are still on the visit form and still print in the history line. Only the template dialog dropped them.
Code evidence	`frontend/src/components/visits/PrescriptionBuilder.tsx:4667-4672 (Triggers, Prior Treatments inputs)` `frontend/src/components/visits/PrescriptionBuilder.tsx:1140-1141 (printed as 'Triggers:' and 'Prior Tx:')`

CR-19 Rx table: column widths and Add Row after every row — Partial

Source	Clinic PDF p.16
Requirement	Narrow the Duration column, widen Instructions so long instructions are readable, and allow adding a row after any row (insert in the middle).
What is missing	Duration is a fixed 5rem + 6rem grid, which may already address the width. Instructions is a single-line input with min width 190px, so long text is still cut off. Add Row and Enter only append at the end; there is no per-row insert.
Code evidence	`frontend/src/components/visits/PrescriptionBuilder.tsx:5185 (grid-cols-[5rem_6rem]), 5202-5205 (Instructions Input, min-w-[190px])` `frontend/src/components/visits/PrescriptionBuilder.tsx:2310-2316, 5016 (addRowAndFocus appends to the end)`

CR-21 Keep patient name, age, sex visible when Patient Context is collapsed — Pending

Source	Clinic PDF p.18-19
Requirement	Header reads 'Patient: NAME, age, sex, doctor, slot' from the visit (fix 'Patient: Unknown'); sticky while scrolling; works from Visit #1; collapsing hides only extra detail.
What is missing	The header still shows only the name, falls back to 'Unknown' when the patient is not in the page's loaded list, has no age or sex, and is not sticky.
Code evidence	`frontend/src/app/dashboard/visits/page.tsx:673-676, 1076 (selectedPatient from loaded list; 'Patient: {name ?? Unknown}')` `frontend/src/components/visits/MedicalVisitForm.tsx:1713-1831 (collapse hides the whole context card)`

CR-22 Make 'On Examination' collapsible and collapsed by default — Pending

Source	Clinic PDF p.20-21
Requirement	Clickable heading to open/close the detailed On Examination block; collapsed by default; remembers last choice; nothing deleted.
What is missing	The detailed block (Fitzpatrick, Acne Severity, Itch Score, Morphology, Distribution, Diagnoses, Detailed Examination) is still on the form. CollapsibleSection has no open/close state despite its name, so the block is always expanded.
Code evidence	`frontend/src/components/visits/PrescriptionBuilder.tsx:142-178 (CollapsibleSection: no toggle or state)` `frontend/src/components/visits/PrescriptionBuilder.tsx:4679+ (On Examination section)`

Appointments

CR-17 Appointments: billing info, bill type, Daily Collection — Pending

Source	Clinic PDF p.14; Pharmacy PDF p.11, 42
Requirement	Show billing information in the empty space on each appointment row; show bill type (first consultation, review, procedure); add Daily Collection (now to be built once as the CR-33 daily collection report).
What is missing	The day calendar has no billing or bill-type data, and no Daily Collection report or menu entry exists.
Code evidence	`frontend/src/components/appointments/DoctorDayCalendar.tsx and frontend/src/components/rooms/RoomCalendar.tsx: no bill/invoice/payment references` `No 'daily collection' string anywhere in frontend/src or backend/src`

Whole software

CR-13 Bigger font and fewer taglines (all screens) — Partial

Source	Clinic PDF p.9
Requirement	(Also restated as rule 1 on page 1 of the pharmacy PDF.) Remove self-explanatory taglines (examples quoted); hints as (i) tooltips; body/table text at least 16 px, headings and names 18-20 px; per-user Text size setting (Normal/Large/Extra large); tables wrap at larger sizes.
What is missing	Screen text was raised globally by 2 px (body 18 px, small text 16 px). The quoted taglines are still present, 12 page headers still carry descriptions, and there is no per-user Text size setting (a tabs-only font scale is stored in the browser and has no UI caller).

Code evidence	`frontend/src/app/globals.css:316-321 (--app-text-increase: 0.125rem)`
	`frontend/src/components/inventory/InventoryWorkspace.tsx:235, 574, 629 (quoted taglines still shown)`
	`frontend/src/components/ui/tabs.tsx:31-66 (localStorage tabs font scale only)`

Appendix A: CRs judged implemented

One line of evidence each, so the split can be audited.

ID	Title	Source	Evidence
CR-09	Pharmacy Billing: Load button does nothing	Pharmacy PDF p.10; Clinic PDF p.5	`frontend/src/app/dashboard/pharmacy/page.tsx:445 (bill scrolled into view on load)`
CR-15	Purchase matching: wrong product suggested when there is no real match	Pharmacy PDF p.21; Clinic PDF p.11	`backend/src/modules/pharmacy/purchase-match-safety.ts:6-38 (name evidence required, mismatch reasons)`
CR-12	Merge Inventory and Inventory Updates	Pharmacy PDF p.29; Clinic PDF p.8	`frontend/src/components/layout/sidebar.tsx:111 (single Inventory item); frontend/src/app/dashboard/inventory-updates/page.tsx (redirects to approvals)`
CR-16	Visit history panel: complaints, history, medicine names only	Clinic PDF p.12-13	`frontend/src/components/visits/PatientHistoryVisitCard.tsx:159, 270, 363-372 (summary/compact/full views); commit 28c7977`
CR-20	Custom investigations saved permanently	Clinic PDF p.17	`backend/prisma/schema.prisma:197 (ClinicInvestigation); frontend/src/components/visits/ClinicInvestigations.tsx:56-79 (add/rename/remove); commit 0edc409`
CR-23	Space-optimised print tightens vertical gaps to fit one page	Clinic PDF p.22-23	`frontend/src/components/visits/PrescriptionBuilder.tsx:1096-1103 (py-0.5 vs py-3, Rx 2px vs 6px); commit a2d1135`

Appendix B: verdicts with some uncertainty

CR	Why it is uncertain
CR-08	Marked Partial only because Examination does not print at all. If the clinic treats printing Examination as a new feature rather than part of CR-08, CR-08 is done.
CR-19	The Duration cell is already a fixed 5rem + 6rem grid. The repo is a shallow clone starting 13/10/2026, after the CR was raised, so whether widths were already changed cannot be told from history. Per-row insert is clearly missing.
CR-14	Fuzzy and prefix name matching exist, so the Zitcare Fort/Forte case may now match, but no test or run covers it. Per-supplier memory and the loose-label suffix are clearly missing.
CR-10	The code parts (ID linking, movement log, status labels, import) exist. The physical stock take and duplicate clean-up are partly operational work that the code cannot show.
CR-24, CR-25, CR-26	Marked Partial because working lists with the underlying data exist, even though they look nothing like the eVitalRx layout. A stricter reading of 'build it like eVitalRx' would call them Pending.
CR-13	The 16 px minimum is met by a global +2 px bump. Whether the remaining taglines are 'self-explanatory' is a judgement for the clinic.
CR-09, CR-12, CR-15, CR-16, CR-20, CR-23	Judged Implemented from code plus the QA notes in docs/qa. Not re-run in a browser for this audit.
